

FOR IMMEDIATE RELEASE:

DMN for production grade Decision Management becomes reality

World-class technical leaders and experts join forces to offer a quick start program

Trisotech, a global leader in digital enterprise transformation software solutions, is pleased to announce a partnership with Allegiance Advisory Group, Bruce Silver Associates and Red Hat.

Montreal, Quebec, Canada, April 12, 2017 — Trisotech (<http://www.trisotech.com>) announced today that it has teamed up with aforementioned major partners to offer an innovative and unique program providing the foundation for using Decision Modeling and Notation (DMN). With this program, organizations are able to rapidly start modeling, analyzing, testing, executing and maintaining operational decisions. In addition, the program offers best practices for an enterprise-level decision management team. The different packages all include subscription to a cloud-based DMN Modeler, DMN basics on-demand training courses, on-site engagement advisory as well as an execution engine.

“This unprecedented program is aimed at companies concerned by their operational decision management and ready to unfold a Decision Management Center of Excellence based on DMN.” says Denis Gagné, CEO at Trisotech.

“What is really interesting about this partnership is that it brings together world-leading experts from different fields. This allows us to offer a turnkey Decision Management solution that will benefit to organizations almost immediately.” adds Bruce Silver.

The program’s training part includes DMN Method & Style courses designed for business users, providing in-class exercises, quizzes to test comprehension and post-class certification. The mentoring is provided by a team of decision experts led by Brian Stucky, the former Freddie Mac Enterprise Rule Steward from Allegiance Advisory Group.

The DMN modeler offered by Trisotech is part of the Digital Enterprise Suite, a highly visual and interactive software suite that enables non-technical business people to innovate, transform and improve their business.

The execution is provided by Red Hat’s new DMN engine, part of Drools business logic integration platform. This Business Rules Management System (BRMS) solution works seamlessly with the Trisotech DMN Modeler. It powers validation and real-time testing, as well as supporting publication and cloud-based execution of decision models.

Registrations for the program are open on Trisotech’s website starting today.
