USE OF SPECIFICATION – TERMS, CONDITIONS & NOTICES

The material in this document details an Object Management Group specification in accordance with the terms, conditions and notices set forth below. This document does not represent a commitment to implement any portion of this specification in any company's products. The information contained in this document is subject to change without notice.

LICENSES

The companies listed above have granted to the Object Management Group, Inc. (OMG) a nonexclusive, royalty-free, paid up, worldwide license to copy and distribute this document and to modify this document and distribute copies of the modified version. Each of the copyright holders listed above has agreed that no person shall be deemed to have infringed the copyright in the included material of any such copyright holder by reason of having used the specification set forth herein or having conformed any computer software to the specification.

Subject to all of the terms and conditions below, the owners of the copyright in this specification hereby grant you a fully-paid up, non-exclusive, nontransferable, perpetual, worldwide license (without the right to sublicense), to use this specification to create and distribute software and special purpose specifications that are based upon this specification, and to use, copy, and distribute this specification as provided under the Copyright Act; provided that: (1) both the copyright notice identified above and this permission notice appear on any copies of this specification; (2) the use of the specifications is for informational purposes and will not be copied or posted on any network computer or broadcast in any media and will not be otherwise resold or transferred for commercial purposes; and (3) no modifications are made to this specification. This limited permission automatically terminates without notice if you breach any of these terms or conditions. Upon termination, you will destroy immediately any copies of the specifications in your possession or control.

PATENTS

The attention of adopters is directed to the possibility that compliance with or adoption of OMG specifications may require use of an invention covered by patent rights. OMG shall not be responsible for identifying patents for which a license may be required by any OMG specification, or for conducting legal inquiries into the legal validity or scope of those patents that are brought to its attention. OMG specifications are prospective and advisory only. Prospective users are responsible for protecting themselves against liability for infringement of patents.

GENERAL USE RESTRICTIONS

Any unauthorized use of this specification may violate copyright laws, trademark laws, and communications regulations and statutes. This document contains information which is protected by copyright. All Rights Reserved. No part of this work covered by copyright herein may be reproduced or used in any form or by any means--graphic, electronic, or mechanical, including photocopying, recording, taping, or information storage and retrieval systems--without permission of the copyright owner.
DISCLAIMER OF WARRANTY

WHILE THIS PUBLICATION IS BELIEVED TO BE ACCURATE, IT IS PROVIDED "AS IS" AND MAY CONTAIN ERRORS OR MISPRINTS. THE OBJECT MANAGEMENT GROUP AND THE COMPANIES LISTED ABOVE MAKE NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARD TO THIS PUBLICATION, INCLUDING BUT NOT LIMITED TO ANY WARRANTY OF TITLE OR OWNERSHIP, IMPLIED WARRANTY OF MERCHANTABILITY OR WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE OR USE. IN NO EVENT SHALL THE OBJECT MANAGEMENT GROUP OR ANY OF THE COMPANIES LISTED ABOVE BE LIABLE FOR ERRORS CONTAINED HEREIN OR FOR DIRECT, INDIRECT, INCIDENTAL, SPECIAL, CONSEQUENTIAL, RELIANCE OR COVER DAMAGES, INCLUDING LOSS OF PROFITS, REVENUE, DATA OR USE, INCURRED BY ANY USER OR ANY THIRD PARTY IN CONNECTION WITH THE FURNISHING, PERFORMANCE, OR USE OF THIS MATERIAL, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

The entire risk as to the quality and performance of software developed using this specification is borne by you. This disclaimer of warranty constitutes an essential part of the license granted to you to use this specification.

RESTRICTED RIGHTS LEGEND

Use, duplication or disclosure by the U.S. Government is subject to the restrictions set forth in subparagraph (c) (1) (ii) of The Rights in Technical Data and Computer Software Clause at DFARS 252.227-7013 or in subparagraph (c)(1) and (2) of the Commercial Computer Software - Restricted Rights clauses at 48 C.F.R. 52.227-19 or as specified in 48 C.F.R. 227-7202-2 of the DoD F.A.R. Supplement and its successors, or as specified in 48 C.F.R. 12.212 of the Federal Acquisition Regulations and its successors, as applicable. The specification copyright owners are as indicated above and may be contacted through the Object Management Group, 9C Medway Rd, PMB 274, Milford, MA 01757, U.S.A.

TRADEMARKS

CORBA®, CORBA logos®, FIBO®, Financial Industry Business Ontology®, FINANCIAL INSTRUMENT GLOBAL IDENTIFIER®, IIOP®, IMM®, Model Driven Architecture®, MDA®, Object Management Group®, OMG®, OMG Logo®, SoaML®, SOA ML®, SysML®, UAF®, Unified Modeling Language®, UML®, UML Cube Logo®, VSIPL®, and XMI® are registered trademarks of the Object Management Group, Inc.

For a complete list of trademarks, see: https://www.omg.org/legal/tm_list.htm. All other products or company names mentioned are used for identification purposes only and may be trademarks of their respective owners.

COMPLIANCE

The copyright holders listed above acknowledge that the Object Management Group (acting itself or through its designees) is and shall at all times be the sole entity that may authorize developers, suppliers and sellers of computer software to use certification marks, trademarks or other special designations to indicate compliance with these materials.

Software developed under the terms of this license may claim compliance or conformance with this specification if and only if the software compliance is of a nature fully matching the applicable compliance points as stated in the specification. Software developed only partially matching the applicable compliance points may claim only that the software was based on this specification, but may not claim compliance or conformance with this specification. In the event that testing suites are implemented or approved by Object Management Group, Inc., software developed using this specification may claim compliance or conformance with the specification only if the software satisfactorily completes the testing suites.
OMG's Issue Reporting Procedure

All OMG specifications are subject to continuous review and improvement. As part of this process we encourage readers to report any ambiguities, inconsistencies, or inaccuracies they may find by completing the Issue Reporting Form listed on the main web page https://www.omg.org, under Documents, Report a Bug/Issue.

Preface

OMG

Founded in 1989, the Object Management Group, Inc. (OMG) is an open membership, not-for-profit computer industry standards consortium that produces and maintains computer industry specifications for interoperable, portable, and reusable enterprise applications in distributed, heterogeneous environments. Membership includes Information Technology vendors, end users, government agencies, and academia.

OMG member companies write, adopt, and maintain its specifications following a mature, open process. OMG’s specifications implement the Model Driven Architecture® (MDA®), maximizing ROI through a full-lifecycle approach to enterprise integration that covers multiple operating systems, programming languages, middleware and networking infrastructures, and software development environments. OMG’s specifications include: UML® (Unified Modeling Language™); CORBA® (Common Object Request Broker Architecture); CWM™ (Common Warehouse Metamodel™); and industry-specific standards for dozens of vertical markets.

More information on the OMG is available at https://www.omg.org/.

OMG Specifications

As noted, OMG specifications address middleware, modeling, and vertical domain frameworks. All OMG Specifications are available from the OMG website at:

https://www.omg.org/spec

All of OMG’s formal specifications may be downloaded without charge from our website. (Products implementing OMG specifications are available from individual suppliers.) Copies of specifications, available in PostScript and PDF format, may be obtained from the Specifications Catalog cited above or by contacting the Object Management Group, Inc. at:

OMG Headquarters
9C Medway Road, PMB 274
Milford, MA 01757
USA
Tel: +1-781-444-0404
Fax: +1-781-444-0320
Email: pubs@omg.org

Certain OMG specifications are also available as ISO standards. Please consult http://www.iso.org

Typographical Conventions

The type styles shown below are used in this document to distinguish programming statements from ordinary English. However, these conventions are not used in tables or section headings where no distinction is necessary.

Times/Times New Roman - 10 pt.: Standard body text

Helvetica/Arial - 10 pt. Bold: OMG Interface Definition Language (OMG IDL) and syntax elements.

Helvetica/Arial - 10 pt: Exceptions
1 Scope

This specification defines the interface between a Navigation System and Command and Control (C2) functions. It is concerned with the transfer of information regarding the location, movement, orientation, and local environment of the platform of which the Navigation System is a part to C2 functions.

2 Conformance

This specification defines conformance points to promote both applicability and interoperability. Services within the specification relating to control of the information reported and specialist parts of the data model are optional. The mandatory services within the interface relate to the transfer of basic information with the default behavior of the Navigation System.

- Precision Time Protocol (IEEE 1588 – http://www.ieee1588.com)
4 Terms and definitions

For the purposes of this specification, the following terms and definitions apply.

- **AB** (Architecture Board)
- **API** (Application Programming Interface)
- **BC** (Business Committee)
- **BCQ** (Business Committee Questionnaire)
- **BoD** (Board of Directors)
- **CCM** (CORBA Component Model)
- **CMS** (Combat Management System)
- **CORBA** (Common Object Request Broker Architecture)
- **CWM** (Common Warehouse Metamodel)
- **DAIS** (Data Acquisition from Industrial Systems)
- **DDS** (Data Distribution Service)
- **EVOT** (Enhanced View of Time)
- **FTF** (Finalization Task Force)
- **GLONASS** (Global Navigation Satellite System)
- **GPS** (Global Positioning System)
- **IDL** (Interface Definition Language)
- **IFF** (Interrogation, Friend or Foe)
- **IIOP** (Internet Inter-Orb Protocol)
- **IPR** (Intellectual Property Right)
- **ISO** (International Organization for Standardization)
- **LOI** (Letter of Intent)
- **LORAN** (Long Range Navigation)
- **MDA** (Model Driven Architecture)
- **METOC** (Meteorological and Oceanographic)
- **MOF** (Meta Object Facility)
- **MQS** (MQSeries)
- **NNSI** (Naval Navigation System Interface)
- **NS** (Naming Service)
- **OARIS** (Open Architecture Radar Interface Standard)
- **ODF** (Open Document Format)
- **OMG** (Object Management Group)
- **PIM** (Platform Independent Model)
- **PSM** (Platform Specific Model)
5 Symbols

No special symbols are introduced in this specification.

7 Command and Control Interface for Navigation Systems

7.1 Introduction

The specification is captured as an Enterprise Architect (EA) UML version 2.1 model; this document being automatically generated as a report from the model.

The UML model is an extension of the OARIS model and follows the same hierarchical structure and naming conventions; this model also has dependencies on the Common Types package defined by the OARIS model (as shown in Figure 7-1) as it reuses classes defined there. The classes re-used from the OARIS specification are shown on the class diagrams for the Domain Model. The general-purpose error handling service classes defined by OARIS are also re-used.

The C2INav model follows the OARIS model organization: there is a UML PIM data model (Navigation_Domain) under the Domain_Model package and a UML PIM for services and interfaces (Navigation_Services) under the Service_Interfaces package. The data model is organized by primary concerns for navigation information, for instance attitude or orientation versus absolute location in the environment, and also models the means of controlling reporting by a navigation system; a common abstraction for reporting is also modelled. The services and their interfaces model the means for a navigation system to report its data and a C2 system to control the characteristics of the navigation system’s reporting.

Additionally, OARIS service interfaces defined for the Provide Subsystem Identification and Manage Subsystem Parameters use cases can be used by C2 Systems to discover and configure a Navigation System. (E.g. choose to listen to a specific Navigation System having been informed of its latency and granularity characteristics).

C2INav follows OARIS modelling nomenclature whereby there are interfaces conceptually representing a CMS and a Subsystem for each use case. For C2INav, CMS should be read as representative of C2 Systems in general and Subsystem as being specifically a Navigation System.

![Figure 7-1: Navigation (Package diagram)](image)

7.2 Navigation_Domain

**Parent Package:** Domain_Model

This package contains the Domain Models for the Navigation services. It is organised according to functionality: i.e. the modelling of attitude (the orientation and offset of the platform relative to its reported position), the platform's position (including velocity and acceleration), the depth of water the platform may be in and the reporting of this information.
7.2.1 accuracy_derivation_type

Type: IDLEnum
Package: Navigation_Domain
The set of methods describing the provenance of the accuracy values

Table 7-1: Attributes of IDLEnum accuracy_derivation_type

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>«idlEnum» DYNAMICALLY_CALIBRATED</td>
<td>The accuracy values have been calibrated using real data to derive accuracy values for particular instruments given particular environmental conditions - i.e. accuracy values will in general vary over time for the same set of instruments.</td>
</tr>
<tr>
<td>«idlEnum» ESTIMATED</td>
<td>The values have been set using engineering judgement.</td>
</tr>
<tr>
<td>«idlEnum» MEASURED</td>
<td>The accuracy values have been measured using some dynamic process that is able to estimate the current performance of the instruments in use.</td>
</tr>
<tr>
<td>«idlEnum» STATICALLY_CALIBRATED</td>
<td>The accuracy values have been calibrated using real data to derive fixed accuracy values for particular instruments.</td>
</tr>
</tbody>
</table>

7.2.2 navigation_accuracy_type

Type: IDLStruct
Package: Navigation_Domain
A base type for classes that report the accuracy of navigational measurements

Table 7-2: Attributes of IDLStruct navigation_accuracy_type

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>derivation accuracy_derivation_type</td>
<td>The provenance or method by which the accuracy values have been derived.</td>
</tr>
<tr>
<td>time_accuracy duration_type</td>
<td>The accuracy (represented as one standard deviation) of the time value.</td>
</tr>
</tbody>
</table>
7.2.3 navigation derivation kind type

Type: IDLEnum
Package: Navigation_Domain
This is the set of instrument types and other means by which navigation information can be derived.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>«idlEnum» COMPOSITE</td>
<td>Information derived by fusing data from more than one of these types of derivation source.</td>
</tr>
<tr>
<td>«idlEnum» DENSITY SENSOR</td>
<td>Information derived from an instrument that measures the (subsurface) sea or air density to estimate depth or altitude.</td>
</tr>
<tr>
<td>«idlEnum» DOPPLER LOG</td>
<td>Information derived from an instrument that exploits the Doppler effect to measure speed relative to the immediate environment, particularly water.</td>
</tr>
<tr>
<td>«idlEnum» EM LOG</td>
<td>Information derived from an instrument that exploits the electromagnetic dynamo effect (conductor moving through an electromagnetic field produces a proportional voltage) to measure speed relative to the immediate environment, particularly water.</td>
</tr>
<tr>
<td>«idlEnum» ESTIMATED</td>
<td>Information is estimated from previously measured values (e.g. dead reckoning).</td>
</tr>
<tr>
<td>«idlEnum» INS</td>
<td>Information derived from instruments based on an Inertial Navigation System (e.g. Gyroscopes and Accelerometers).</td>
</tr>
<tr>
<td>«idlEnum» LW HYPERBOLIC INTERSECT</td>
<td>Navigation based on the intersection of hyperbolic curves derived from long wave radio signals from known ground stations with repeaters - e.g. LORAN B and C.</td>
</tr>
<tr>
<td>«idlEnum» OTHER METHOD</td>
<td>Information has been derived using some other technology.</td>
</tr>
<tr>
<td>«idlEnum» PRESSURE SENSOR</td>
<td>Information derived from an instrument that measures the (subsurface) sea or air pressure to estimate depth or altitude.</td>
</tr>
<tr>
<td>«idlEnum» QUANTUM GEOLOCATION</td>
<td>Information derived by sensing the Earth's gravitational and/or magnetic field and/or their gradients using single particle systems that exploit quantum effects.</td>
</tr>
<tr>
<td>«idlEnum» QUANTUM INS</td>
<td>Information derived from instruments based on an Inertial Navigation System that measures acceleration using single particle systems that exploit quantum techniques.</td>
</tr>
<tr>
<td>«idlEnum» SATELLITE</td>
<td>Information derived from a satellite-based navigation system (e.g. GPS and GLONASS).</td>
</tr>
<tr>
<td>«idlEnum» USER SUPPLIED</td>
<td>Information has been supplied by the user (e.g. manual entry from a non-integrated system).</td>
</tr>
<tr>
<td>«idlEnum» VISUAL GEOLOCATION</td>
<td>Information derived by sensing the external environment and resolving position and orientation with reference to external data such as charts (e.g. SLAM techniques).</td>
</tr>
</tbody>
</table>

7.2.4 Attitude

Parent Package: Navigation_Domain
This package contains classes to model the attitude of the platform. That is the orientation and offset of the platform relative to its reported position. This package provides a data model for services that relate to micro-scale precision, supporting precise location and orientation of an individual component of the platform.
7.2.4.1 attitude_rotation_accuracy_type

**Type:** IDLStruct navigation_accuracy_type  
**Package:** Attitude  
This class encapsulates the error estimates associated with the platform's rotational attitude values. Accuracies are reported as one standard deviation.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>pitch_accuracy</td>
<td>elevation_coordinate_type</td>
</tr>
<tr>
<td>roll_accuracy</td>
<td>elevation_coordinate_type</td>
</tr>
<tr>
<td>yaw_accuracy</td>
<td>azimuth_coordinate_type</td>
</tr>
</tbody>
</table>

7.2.4.2 attitude_rotation_type

**Type:** IDLStruct offset_report_type  
**Package:** Attitude  
This class encapsulates the instantaneous rotation of the platform from its nominal, at-rest orientation. Non-normative: typically, due to the variable motion of the environment - sea, air, etc. - through which it is travelling.
Table 7-5: Attributes of IDLStruct attitude_rotation_type

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>pitch elevation_coordinate_type</td>
<td>The pitch of the platform, relative to its platform reference point in a vertical plane. It is the clockwise angle of rotation around the lateral axis (towards starboard/right) through the center of rotation. For sea systems, the angle from horizontal to the bow; for air systems, the angle from horizontal to the nose; for land systems, the angle from horizontal to the front.</td>
</tr>
<tr>
<td>roll elevation_coordinate_type</td>
<td>The roll of the platform, relative to its platform reference point in a vertical plane. It is the angle of rotation about the longitudinal axis through the center of rotation (front-to-back). The roll angle is defined as that of the at-rest horizontal through the platform’s reference on the starboard side for sea and air systems and on the right (forward facing) for land systems.</td>
</tr>
<tr>
<td>yaw azimuth_coordinate_type</td>
<td>The yaw of the platform, relative to its platform reference point in a horizontal plane. It is the angle of rotation about the vertical axis through the center of rotation (top-to-bottom) relative to the platform’s course. For sea systems, the angle to the bow; for air systems, the angle to the nose; for land systems, the angle to the front.</td>
</tr>
</tbody>
</table>

7.2.4.3 measurement_kind_type

Type: IDLEnum  
Package: Attitude

The kind of measurement relating to the statistical process applied to the quantities in question over time.

Table 7-6: Attributes of IDLEnum measurement_kind_type

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>«idlEnum» ABSOLUTE_PEAK</td>
<td>The maximum of the absolute value of the raw measurements over a complete cycle (a complete cycle is defined as the interval between local maxima).</td>
</tr>
<tr>
<td>«idlEnum» INSTANTANEOUS</td>
<td>The raw measurement at the stated time</td>
</tr>
<tr>
<td>«idlEnum» MEAN</td>
<td>The arithmetic mean (average) of the raw measurements over a complete cycle (a complete cycle is defined as the interval between local maxima).</td>
</tr>
<tr>
<td>«idlEnum» ROOT_MEAN_SQUARE</td>
<td>The root mean square average of the raw measurements over a complete cycle (a complete cycle is defined as the interval between local maxima).</td>
</tr>
<tr>
<td>«idlEnum» SMOOTHED</td>
<td>The system’s best estimate for the current value of the quantities based on recent raw measurements.</td>
</tr>
</tbody>
</table>

7.2.4.4 offset_report_type

Type: IDLStruct navigation_report_type  
Package: Attitude
This is the base type for the reporting of all information that is an offset from the platform's mean reported motion and its at-rest orientation; hence this includes attitude information. These reports are keyed on the statistical kind of measurement, enabling different views of cyclical motion to be reported.

### Table 7-7: Attributes of IDLStruct offset_report_type

#### 7.2.4.5 Attitude.Ext

**Parent Package:** Attitude

#### 7.2.4.5.1 attitude_rotation_rate_accuracy_type

**Type:** IDLStruct `navigation_accuracy_type`

**Package:** Ext

This class encapsulates the error estimates associated with the platform's rotational attitude rate values. Accuracies are reported as one standard deviation.

[Figure 7-4 Attitude Ext (Logical diagram)]
Table 7-8: Attributes of IDLStruct attitude_rotation_rate_accuracy_type

</tr>
</tbody>
</table>

7.2.4.5.3 position_offset_accuracy_type

Type: IDLStruct navigation_accuracy_type  
Package: Ext  
This class encapsulates the error estimates associated with the platform's attitude offset values. Accuracies are reported as one standard deviation.
### Attributes of IDLStruct position_offset_accuracy_type

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>sway_accuracy</td>
<td>The accuracy of the lateral value to one standard deviation.</td>
</tr>
<tr>
<td>surge_accuracy</td>
<td>The accuracy of the longitudinal value to one standard deviation.</td>
</tr>
<tr>
<td>heave_accuracy</td>
<td>The accuracy of the vertical value to one standard deviation.</td>
</tr>
</tbody>
</table>

#### 7.2.4.5.4 position_offset_type

**Type:** IDLStruct offset_report_type  
**Package:** Ext  
This class encapsulates the instantaneous offset of the platform from its mean reported motion. Non-normative: typically, due to the variable motion of the environment - sea, air, etc. - through which it is travelling.

### Attributes of IDLStruct position_offset_type

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>sway</td>
<td>The instantaneous offset from mean motion on the lateral horizontal axis through the platform reference point.</td>
</tr>
<tr>
<td></td>
<td>For sea and air systems port-starboard - starboard positive</td>
</tr>
<tr>
<td></td>
<td>For land systems side-to-side - right positive when facing forwards</td>
</tr>
<tr>
<td>surge</td>
<td>The instantaneous offset from mean motion on the longitudinal horizontal axis through the platform reference point.</td>
</tr>
<tr>
<td></td>
<td>For sea systems stern-bow - bow positive</td>
</tr>
<tr>
<td></td>
<td>For air systems tail-nose - nose positive</td>
</tr>
<tr>
<td></td>
<td>For land systems back-to-front - front positive</td>
</tr>
<tr>
<td>heave</td>
<td>The instantaneous offset from mean motion on the vertical axis through the platform reference point.</td>
</tr>
<tr>
<td></td>
<td>For sea systems keel-mast - mast positive</td>
</tr>
<tr>
<td></td>
<td>For air and land systems bottom-to-top - top positive</td>
</tr>
</tbody>
</table>

#### 7.2.4.5.5 velocity_offset_accuracy_type

**Type:** IDLStruct navigation_accuracy_type  
**Package:** Ext  
This class encapsulates the error estimates associated with the platform's attitude offset rate values. Accuracies are reported as one standard deviation.

### Attributes of IDLStruct velocity_offset_accuracy_type

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>sway_rate_accuracy</td>
<td>The accuracy of the lateral rate value to one standard deviation.</td>
</tr>
<tr>
<td>surge_rate_accuracy</td>
<td>The accuracy of the longitudinal rate value to one standard deviation.</td>
</tr>
<tr>
<td>heave_rate_accuracy</td>
<td>The accuracy of the vertical rate value to one standard deviation.</td>
</tr>
</tbody>
</table>
### 7.2.4.5.6 velocity_offset_type

**Type:** IDLStruct offset_report_type  
**Package:** Ext

This class encapsulates the instantaneous rate of change of the offset of the platform from its mean reported motion.

**Table 7-13: Attributes of IDLStruct velocity_offset_type**

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>sway_rate</td>
<td>The instantaneous rate of change of the offset from mean motion on the lateral horizontal axis through the platform reference point. For sea and air systems port-starboard - starboard positive. For land systems side-to-side - right positive when facing forwards.</td>
</tr>
<tr>
<td>surge_rate</td>
<td>The instantaneous rate of change of the offset from mean motion on the longitudinal horizontal axis through the platform reference point. For sea systems stern-bow - bow positive. For air systems tail-nose - nose positive. For land systems back-to-front - front positive.</td>
</tr>
<tr>
<td>heave_rate</td>
<td>The instantaneous rate of change of the offset from mean motion on the vertical axis through the platform reference point. For sea systems keel-mast - mast positive. For air and land systems bottom-to-top - top positive.</td>
</tr>
</tbody>
</table>

### 7.2.5 Depth

**Parent Package:** Navigation_Domain  

This package contains classes to model the depth of water the platform may be in.

---

![Figure 7-5 Depth (Logical diagram)](image-url)
7.2.5.1 depth_coordinate_type

Type: IDLTypeDef double
Package: Depth
Measured positive down in meters. c.f. altitude_coordinate_type in OARIS Common_Types package.
Range = -1 e2 .. 1 e5
Resolution = 1
Unit = m

7.2.5.2 depth_report_type

Type: IDLStruct
Package: Depth
Used by waterborne craft to report depth information.

Table 7-14: Attributes of IDLStruct depth_report_type

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>depth_below_keel</td>
<td>The depth of the bed below the keel.</td>
</tr>
<tr>
<td>keel_depth</td>
<td>The depth of the keel below the surface of the water.</td>
</tr>
<tr>
<td>water_depth</td>
<td>The depth of the bed below the water's surface.</td>
</tr>
</tbody>
</table>

7.2.5.3 depth_accuracy_type

Type: IDLStruct
Package: Depth
The accuracy of the platform's depth report

Table 7-15: Attributes of IDLStruct depth_accuracy_type

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>depth_below_keel</td>
<td>The accuracy of the depth below keel measurement.</td>
</tr>
<tr>
<td>keel_depth</td>
<td>The accuracy of the keel depth measurement.</td>
</tr>
<tr>
<td>water_depth</td>
<td>The accuracy of the water depth measurement.</td>
</tr>
</tbody>
</table>

7.2.6 Position

Parent Package: Navigation_Domain
This package contains classes to model the platform's position including height/depth/altitude, velocity, and acceleration. This package provides a data model for services that relate to macro-scale precision, supporting the location and motion of the platform as a point entity within its environment.
7.2.6.1 altitude_measurement_type

Type: IDLEnum
Package: Position

This class indicates the semantics of the height attribute. It describes how the reported height (or depth) has been derived.
Table 7-16: Attributes of IDLEnum altitude_measurement_type

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>«enum» DENSITY</td>
<td>It is reporting a measurement based on local density (of air or water).</td>
</tr>
<tr>
<td>«enum» GRAVITY</td>
<td>It is reporting a measurement based on local gravity.</td>
</tr>
<tr>
<td>«enum» INDICATED</td>
<td>As reported by the platform's own altimeter (or depth sensor). Typically, but not necessarily this is pressure related. The precise option rather than this one should be reported if known.</td>
</tr>
<tr>
<td>«enum» PRESSURE</td>
<td>It is derived from a pressure sensor.</td>
</tr>
<tr>
<td>«enum» RELATIVE_TO_GEOID</td>
<td>It is reporting a measurement made relative to the GEOID (WGS84) - e.g. using a satellite navigation system.</td>
</tr>
<tr>
<td>«enum» RELATIVE_TO_GROUND</td>
<td>The distance to the ground below (or above for underground systems) is being measured and reported.</td>
</tr>
<tr>
<td>«enum» RELATIVE_TO_MSL</td>
<td>It is reporting a measurement made relative to mean sea level.</td>
</tr>
</tbody>
</table>

7.2.6.2 own_position_accuracy_type

Type: IDLStruct navigation_accuracy_type
Package: Position
The accuracy of the platform's own position report.

Table 7-17: Attributes of IDLStruct own_position_accuracy_type

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>position position_accuracy_coordinate_type</td>
<td>The accuracy of the reported position in the chosen coordinate system for reporting. This should be the same choice as for the position itself.</td>
</tr>
</tbody>
</table>

7.2.6.3 own_position_type

Type: IDLStruct navigation_report_type
Package: Position
The platform's own position report.

Table 7-18: Attributes of IDLStruct own_position_type

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>altitude_kind altitude_measurement_type [0..1]</td>
<td>Describes the semantics of the position's altitude attribute. Optional: omit only if altitude is not reported.</td>
</tr>
<tr>
<td>coordinate_specification coordinate_specification_type</td>
<td>The specification of the coordinate system used for reporting own position and its accuracy. In most use cases Cartesian or WGS84, Earth Referenced choices are expected; in some use cases other choices for reporting relative to some known datum could be used.</td>
</tr>
<tr>
<td>position position_coordinate_type</td>
<td>The position of the reporting platform in the chosen coordinate system for reporting.</td>
</tr>
</tbody>
</table>
7.2.6.4 own_velocity_accuracy_type

Type: IDLStruct navigation_accuracy_type
Package: Position
The accuracy of the platform's own velocity report.

Table 7-19: Attributes of IDLStruct own_velocity_accuracy_type

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>velocity velocity_accuracy_coordinate_type</td>
<td>The accuracy of the reporting platform's velocity with reference to the coordinate system used for reporting.</td>
</tr>
</tbody>
</table>

7.2.6.5 own_velocity_type

Type: IDLStruct navigation_report_type
Package: Position
The platform's own velocity report.

Table 7-20: Attributes of IDLStruct own_velocity_type

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>coordinate_specification</td>
<td>The specification of the coordinate system used for reporting own velocity and its accuracy. In most use cases Cartesian or WGS84, Earth Referenced choices are expected; in some use cases other choices for reporting relative to some known datum could be used.</td>
</tr>
<tr>
<td>coordinate_specification_type</td>
<td></td>
</tr>
<tr>
<td>«key» measurement_kind velocity_measurement_type</td>
<td>The definition of the velocity being measured.</td>

<tr>
<td>velocity velocity_coordinate_type</td>
<td>The velocity of the reporting platform with reference to the chosen coordinate system for reporting.</td>
</tr>
</tbody>
</table>

7.2.6.6 velocity_measurement_type

Type: IDLEnum
Package: Position
This class defines what it is that is having its velocity measured.

Table 7-21: Attributes of IDLEnum velocity_measurement_type

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>«enum» ABSOLUTE</td>
<td>The measurement is of absolute velocity (i.e. relative to the Earth).</td>
</tr>
<tr>
<td>«enum» AIR</td>
<td>The measurement is of the air in the local environment itself (i.e. the wind speed). This is only to be reported as a true value; i.e. it is not based on a pressure-based 'indicated' sensor reading for relative air speed that isn't corrected for density.</td>
</tr>
<tr>
<td>«enum» RELATIVE_INDICATED</td>
<td>The measurement is of velocity relative to the environment (i.e. water or air) using an indirect approximation such as air pressure.</td>
</tr>
<tr>
<td>«enum» RELATIVE_TRUE</td>
<td>The measurement is of velocity relative to the environment (i.e. water or air) using a method that is not subject to systematic approximation error as is the case with 'Indicated Air Speed' as measured by a pressure sensor.</td>
</tr>
</tbody>
</table>
### 7.2.6.7 Position.Ext

**class Position Ext**

```
«idlStruct»
speed_rate_type

«key»

```

**«idlTypedef»**

```
double
«idlTypedef»
```

From OARIS

**«enum» WATER**

The measurement is of the water current in the local environment itself (i.e. the movement of the water).

#### 7.2.6.7.1 own_acceleration_accuracy_type

**Type:** IDLStruct  
**Package:** Ext  

The accuracy of the platform's own acceleration report.

**Table 7-22: Attributes of IDLStruct own_acceleration_accuracy_type**

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>angle_of_climb_rate_accuracy elevation_rate_type [0..1]</td>
<td>The accuracy of the angle of climb rate - 1 standard deviation.</td>
</tr>
<tr>
<td>heading_rate_accuracy azimuth_rate_type</td>
<td>The accuracy of the heading rate - 1 standard deviation.</td>
</tr>
<tr>
<td>speed_rate_accuracy speed_rate_type</td>
<td>The accuracy of the speed rate - 1 standard deviation.</td>
</tr>
</tbody>
</table>
7.2.6.7.2 own_acceleration_type

Type: IDLStruct navigation_report_type
Package: Ext
The platform's reporting of its change in velocity

Table 7-23: Attributes of IDLStruct own_acceleration_type

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>angle_of_climb_rate elevation_rate_type [0..1]</td>
<td>The rate at which the angle of climb is changing.</td>
</tr>
<tr>
<td>heading_rate azimuth_rate_type</td>
<td>The rate at which the heading is changing.</td>
</tr>
<tr>
<td>«key» measurement_kind velocity_measurement_type</td>
<td>The definition of the acceleration (change in velocity) being measured.</td>
</tr>
<tr>
<td>speed_rate speed_rate_type</td>
<td>The rate at which the speed is changing.</td>
</tr>
</tbody>
</table>

7.2.6.7.3 speed_rate_type

Type: IDLTypeDef double
Package: Ext
The rate of change of speed in meters per second-squared
Range = -1e3 .. 1e3
Resolution = 0.001
Unit = m/s²

7.2.7 Reporting

Parent Package: Navigation_Domain
This package contains classes that provide a common abstraction for the reporting of navigation information.

Figure 7-8: Reporting (Logical diagram)

7.2.7.1 navigation_report_kind_type

Type: IDLTypeDef implementation defined
Package: Reporting
This class is used in service selection to specify the type of navigation report being requested. Its implementation is determined by the PSM mapping.

### 7.2.7.2 navigation_report_type

**Type:** IDLStruct  
**Package:** Reporting  
A base type for classes that report navigational measurements

#### Table 7-24: Attributes of IDLStruct navigation_report_type

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>composite_contributors</td>
<td>An optional set of contributing sensor kinds that have been used to derive the report. This set is defined when the system kind is COMPOSITE.</td>
</tr>
<tr>
<td>navigation_derivation_kind_type [0..*]</td>
<td></td>
</tr>
<tr>
<td>«key» simulated boolean</td>
<td>Whether the information has been simulated - e.g. for operator training.</td>
</tr>
<tr>
<td>specific_system string</td>
<td>The specific system employed - e.g. GPS, LORAN-B</td>
</tr>
<tr>
<td>system_kind navigation_derivation_kind_type</td>
<td>The generic type of navigation system used.</td>
</tr>
<tr>
<td>time_of_information time_type</td>
<td>The time for which the report values are valid.</td>
</tr>
</tbody>
</table>

### 7.2.7.3 Reporting.Ext

**Parent Package:** Reporting

#### Figure 7-9: Reporting Ext (Logical diagram)

### 7.2.7.3.1 navigation_covariance_type

**Type:** IDLStruct  
**Package:** Ext  
This class encapsulates the covariance between the measurements in one or more navigation_report_instances. The rows and columns of the triangular covariance matrix relate to the (3) quantities from the first instance, optionally the (3) quantities from each of the further instances and finally, optionally, time.
This, for instance allows the covariance between rotational attitude and position to be represented or the covariance between rotational attitude, position, all their rates of change and time.

Table 7-25: Attributes of IDLStruct navigation_covariance_type

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>include_time</td>
<td>boolean</td>
</tr>
<tr>
<td>value</td>
<td>double [0..*]</td>
</tr>
</tbody>
</table>

Whether time is included in the covariance - it is always represented in the last row and column.

The content of the triangular covariance matrix omitting symmetric (duplicate) values. Valid lengths are sum(n=1..*; 3n) and sum(n=1..*; 3n+1). The sequence starts 6, 10, 21, 28, 45, ...

7.2.7.3.2 navigation_report_kind_sequence_type

Type: IDLSequence navigation_report_kind_type
Package: Ext
A sequence of navigation report kinds. It is expected that this class will map to implementation specific mechanisms in PSMs.

7.2.8 Reporting

Parent Package: Navigation_Domain
This package contains classes that encapsulate the information that can parameterize the reporting of navigation information.

Table 7-26: Attributes of IDLStruct navigation_request_type

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>interval</td>
<td>duration_type [0..1]</td>
</tr>
<tr>
<td>measurement_kind</td>
<td>measurement_kind_type [0..1]</td>
</tr>
</tbody>
</table>

The nominal interval between reports being requested. Omit to request at the default rate for the navigation system.

The kind of statistical reporting of the measurements being requested. Omit to request all measurement kinds supported by the navigation system.
### 7.3 Navigation_Services

**Parent Package:** Service_Interfaces

The Navigation Services define the methods for a Navigation System to report its data to a C2 System and for a C2 System to control the rate and content of the data reported by a Navigation System. The usage of these services is presented in a series of sequence diagrams aligned with this specification’s conformance points from section **Error! Reference source not found.**; basic flows describe normal operation and alternative flows describe error handling.

Navigation_CMS and Navigation_Sub are the interfaces to be implemented by C2 (including CMS) and Navigation System components, respectively.

![Sequence Diagram](image)

**Figure 7-11: Basic Flow - Basic Reporting (Sequence diagram)**
Figure 7-12: Basic Flow - Reporting Control - Default (Sequence diagram)
Each reporting timescale

**Attitude**

Loop for each attitude reporting interval
[At default rate]

write_rotational_attitude
(attitude_rotation_type)

**Position**

Loop for each position reporting interval
[At specific rate]

write_position
(own_position_type)

**Velocity**

Loop for each relative velocity reporting interval
[At default rate]

write_velocity
(relative_velocity)

**Air**

Loop for each air velocity reporting interval
[At specified rate]

write_velocity
(air_velocity)

This illustrates the expected interaction between the C2 System and Navigation System for the C2INav Reporting Control conformance point, where specialist data is required.
This illustrates the expected interaction between the C2 System and Navigation System for the C2INav Specialist Data conformance point.

Figure 7-14: Basic Flow - Specialist Data - Covariance (Sequence diagram)
This illustrates an error producing interaction between the C2 System and Navigation System for the C2INav Reporting Control conformance point. The Navigation System is unable to provide the specifically requested data.

request_custom_navigation_data(request_id, report_kind=velocity_measurement_kind=PEAK, cancel=false)
receive_acknowledgement(request_id, accepted=false)
request_custom_navigation_data(request_id, report_kind=position_interval=position_interval, cancel=false)
receive_acknowledgement(request_id, accepted=false)
request_custom_navigation_data(request_id, report_kind=rotation_attitude, cancel=false)
receive_error(request_id, measurement_kind_not_supported)
receive_error(request_id, interval_not_supported)
request_custom_navigation_data(request_id, report_kind=rotation_attitude_rate, cancel=false)
receive_error(request_id, report_kind_not_supported)

This illustrates an error producing interaction between the C2 System and Navigation System for the C2INav Specialist Data conformance point. The Navigation System is unable to provide the specifically requested covariance data.

request_default_navigation_data(requests_id, cancel=false)
receive_acknowledgement(request_id, accepted=true)
request_covariance(request_id, {rotation_attitude_rate, acceleration})
receive_acknowledgement(request_id, accepted=false)
receive_error(request_id, covariance_variables_not_supported)
Figure 7-17: Service Interface Navigation (Logical diagram)

### 7.3.1 Navigation_CMS

**Type:** IDLInterface common_use_case_interface  
**Package:** Navigation_Services  
The interface implemented by C2 components to consume C2INav services

**Table 7-27: Methods of IDLInterface Navigation_CMS**

<table>
<thead>

</table>
8 Domain Model Platform-Specific Models

8.1 DDS PSM

The DDS Data Model PSM defines a set of IDL files for the Data Model packages defined by the PIM. Topic types (i.e. IDL structs with keys) are defined for those IDL struct stereotyped classes that classify a single parameter on an interface method. This avoids redundant indirection. Comments are added to the IDL files to reflect the mapping rules below.

IDL types referred to by this PSM but defined by OARIS are to be found in the DDS PSM files for the OARIS specification. This specification depends upon Common_Types.idl, Coordinates_and_Positions.idl and TimeBase.idl.

The detailed rules for the MDA code generation from the Data Model PIM to the DDS PSM IDL are as follows:

- The PIM attributes are mapped to IDL attributes.
- Optional attributes are mapped to a union type with a single member present when the exists case attribute is true.
- Collections in the PIM are mapped to IDL sequences.
- Specialization / Generalization PIM relationships are mapped to in-lined base type attributes.
- Navigable association to topic instance types are mapped to a key value, or set of values defined by a struct, where there are multiple keys. Where the association is to a generalization a union of the possible key types of the specializations is used. Unions and supporting enumerations are defined irrespective of the existence of associations to use them. One-to-many associations map to a bounded sequence of such values.

8.2 GraphQL PSM

The GraphQL (see https://graphql.org/) Data Model PSM defines a set of schema files for the Data Model packages defined by the PIM.

The detailed rules for the MDA code generation from the Data Model PIM to the DDS PSM IDL are as follows:

- The PIM attributes are mapped to GraphQL type attributes.
- Mandatory attributes are mapped to a mandatory GraphQL attributes with an exclamation mark – ‘!’.
- Optional attributes are mapped to an optional GraphQL attributes without an exclamation mark.
- Collections in the PIM are mapped to GraphQL sequences.
- Specialization / Generalization PIM relationships are mapped to in-lined base type attributes.
This page intentionally left blank.
9  Service Model Platform-Specific Models

9.1 DDS PSM

The DDS Services PSM defines IDL files for each package defined in the Services PIM. For each method on each interface class an IDL struct for a DDS topic named for the method is generated; each parameter is mapped to an attribute of the IDL struct. This is unless there is only one attribute (of IDL struct stereotype) in which case the topic type is defined in the Domain Model (i.e. it corresponds to the parameter’s class). Note that the PIM only defines in parameters, there are no return parameters defined and all methods have at least one parameter.

The DDS PSM maps the request_all_navigation_data and request_navigation_data method to the DDS discovery, publish and subscribe functionality. Consequently, these methods are not explicitly defined by the DDS IDL.

9.2 GraphQL PSM

The GraphQL Services PSM defines a set of schema files files for each package defined in the Services PIM. For each method on each interface class a GraphQL GraphQL Query type is generated; each parameter is mapped to an attribute of the Query type.

The GraphQL PSM maps the request_all_navigation_data and request_navigation_data methods to the GraphQL subscription types.
