#### USE OF SPECIFICATION - TERMS, CONDITIONS & NOTICES

The material in this document details an Object Management Group specification in accordance with the terms, conditions and notices set forth below. This document does not represent a commitment to implement any portion of this specification in any company's products. The information contained in this document is subject to change without notice.

#### LICENSES

The companies listed above have granted to the Object Management Group, Inc. (OMG) a nonexclusive, royaltyfree, paid up, worldwide license to copy and distribute this document and to modify this document and distribute copies of the modified version. Each of the copyright holders listed above has agreed that no person shall be deemed to have infringed the copyright in the included material of any such copyright holder by reason of having used the specification set forth herein or having conformed any computer software to the specification.

Subject to all of the terms and conditions below, the owners of the copyright in this specification hereby grant you a fully-paid up, non-exclusive, nontransferable, perpetual, worldwide license (without the right to sublicense), to use this specification to create and distribute software and special purpose specifications that are based upon this specification, and to use, copy, and distribute this specification as provided under the Copyright Act; provided that: (1) both the copyright notice identified above and this permission notice appear on any copies of this specification; (2) the use of the specifications is for informational purposes and will not be copied or posted on any network computer or broadcast in any media and will not be otherwise resold or transferred for commercial purposes; and (3) no modifications are made to this specification. This limited permission automatically terminates without notice if you breach any of these terms or conditions. Upon termination, you will destroy immediately any copies of the specifications in your possession or control.

#### PATENTS

The attention of adopters is directed to the possibility that compliance with or adoption of OMG specifications may require use of an invention covered by patent rights. OMG shall not be responsible for identifying patents for which a license may be required by any OMG specification, or for conducting legal inquiries into the legal validity or scope of those patents that are brought to its attention. OMG specifications are prospective and advisory only. Prospective users are responsible for protecting themselves against liability for infringement of patents.

#### GENERAL USE RESTRICTIONS

Any unauthorized use of this specification may violate copyright laws, trademark laws, and communications regulations and statutes. This document contains information which is protected by copyright. All Rights Reserved. No part of this work covered by copyright herein may be reproduced or used in any form or by any means--graphic, electronic, or mechanical, including photocopying, recording, taping, or information storage and retrieval systems--without permission of the copyright owner.

#### DISCLAIMER OF WARRANTY

WHILE THIS PUBLICATION IS BELIEVED TO BE ACCURATE, IT IS PROVIDED "AS IS" AND MAY CONTAIN ERRORS OR MISPRINTS. THE OBJECT MANAGEMENT GROUP AND THE COMPANIES LISTED ABOVE MAKE NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARD TO THIS PUBLICATION, INCLUDING BUT NOT LIMITED TO ANY WARRANTY OF TITLE OR OWNERSHIP, IMPLIED WARRANTY OF MERCHANTABILITY OR WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE OR USE. IN NO EVENT SHALL THE OBJECT MANAGEMENT GROUP OR ANY OF THE COMPANIES LISTED ABOVE BE LIABLE FOR ERRORS CONTAINED HEREIN OR FOR DIRECT, INDIRECT, INCIDENTAL, SPECIAL, CONSEQUENTIAL, RELIANCE OR COVER DAMAGES, INCLUDING LOSS OF PROFITS, REVENUE, DATA OR USE, INCURRED BY ANY USER OR ANY THIRD PARTY IN CONNECTION WITH THE FURNISHING, PERFORMANCE, OR USE OF THIS MATERIAL, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

The entire risk as to the quality and performance of software developed using this specification is borne by you. This disclaimer of warranty constitutes an essential part of the license granted to you to use this specification.

#### **RESTRICTED RIGHTS LEGEND**

Use, duplication or disclosure by the U.S. Government is subject to the restrictions set forth in subparagraph (c) (1) (ii) of The Rights in Technical Data and Computer Software Clause at DFARS 252.227-7013 or in subparagraph (c)(1) and (2) of the Commercial Computer Software - Restricted Rights clauses at 48 C.F.R. 52.227-19 or as specified in 48 C.F.R. 227-7202-2 of the DoD F.A.R. Supplement and its successors, or as specified in 48 C.F.R. 12.212 of the Federal Acquisition Regulations and its successors, as applicable. The specification copyright owners are as indicated above and may be contacted through the Object Management Group, 109 Highland Avenue, Needham, MA 024949C Medway Road, PMB 274, Milford, MA 01757, U.S.A.

#### TRADEMARKS

CORBA®, CORBA logos®, FIBO®, Financial Industry Business Ontology®, FINANCIAL INSTRUMENT GLOBAL IDENTIFIER®, IIOP®, IMM®, Model Driven Architecture®, MDA®, Object Management Group®, OMG®, OMG Logo®, SoaML®, SOAML®, SysML®, UAF®, Unified Modeling Language®, UML®, UML Cube Logo®, VSIPL®, and XMI® are registered trademarks of the Object Management Group, Inc.

For a complete list of trademarks, see:

<u>http://www.omg.org/legal/tm\_list.htm.https://www.omg.org/legal/tm\_list.htm.</u> All other products or company names mentioned are used for identification purposes only, and may be trademarks of their respective owners.

#### COMPLIANCE

The copyright holders listed above acknowledge that the Object Management Group (acting itself or through its designees) is and shall at all times be the sole entity that may authorize developers, suppliers and sellers of computer software to use certification marks, trademarks or other special designations to indicate compliance with these materials.

Software developed under the terms of this license may claim compliance or conformance with this specification if and only if the software compliance is of a nature fully matching the applicable compliance points as stated in the specification. Software developed only partially matching the applicable compliance points may claim only that the software was based on this specification, but may not claim compliance or conformance with this specification. In the event that testing suites are implemented or approved by Object Management Group, Inc., software developed using this specification may claim compliance or conformance with the specification only if the software satisfactorily completes the testing suites.

### **OMG's Issue Reporting Procedure**

All OMG specifications are subject to continuous review and improvement. As part of this process we encourage readers to report any ambiguities, inconsistencies, or inaccuracies they may find by completing the Issue Reporting Form listed on the main web page httphttps://www.omg.org, under Documents, Report a Bug/Issue.

# Preface

### OMG

Founded in 1989, the Object Management Group, Inc. (OMG) is an open membership, not-for-profit computer industry standards consortium that produces and maintains computer industry specifications for interoperable, portable, and reusable enterprise applications in distributed, heterogeneous environments. Membership includes Information Technology vendors, end users, government agencies, and academia.

OMG member companies write, adopt, and maintain its specifications following a mature, open process. OMG's specifications implement the Model Driven Architecture<sup>®</sup> (MDA<sup>®</sup>), maximizing ROI through a full-lifecycle approach to enterprise integration that covers multiple operating systems, programming languages, middleware and networking infrastructures, and software development environments. OMG's specifications include: UML<sup>®</sup> (Unified Modeling Language<sup>™</sup>); CORBA<sup>®</sup> (Common Object Request Broker Architecture); CWM<sup>™</sup> (Common Warehouse Metamodel<sup>™</sup>); and industry-specific standards for dozens of vertical markets.

More information on the OMG is available at httphttps://www.omg.org/.

# **OMG Specifications**

As noted, OMG specifications address middleware, modeling, and vertical domain frameworks. All OMG As noted, OMG specifications address middleware, modeling, and vertical domain frameworks. All OMG Specifications are available from the OMG website at:

httphttps://www.omg.org/spec

All of OMG's formal specifications may be downloaded without charge from our website. (Products implementing OMG specifications are available from individual suppliers.) Copies of specifications, available in PostScript and PDF format, may be obtained from the Specifications Catalog cited above or by contacting the Object Management Group, Inc. at:

OMG Headquarters 109 Highland Avenue Needham, MA 024949<u>C Medway Road</u> <u>PMB 274</u> Milford, MA 01757 USA Tel: +1-781-444-0404 Fax: +1-781-444-0320 Email: <u>pubs@omg.org</u>

Certain OMG specifications are also available as ISO standards. Please consult http://www.iso.org

#### **Typographical Conventions**

The type styles shown below are used in this document to distinguish programming statements from ordinary-English. However, these conventions are not used in tables or section headings where no distinction is necessary. Times/Times New Roman 10 pt.: Standard body text

Helvetica/Arial - 10 pt. Bold: OMG Interface Definition Language (OMG IDL) and syntax elements.

Command and Control Interface for Navigation (C2INav),

Courier/Courier New - 10 pt. Bold: Programming language elements.

Helvetica/Arial 10 pt: Exceptions

# 0 Issues To Be Discussed

### 0.1 Non-Function Quality of Service Requirements

a) Proposals shall discuss the non-functional, quality of service requirements typical in integrationof navigation with C2 System systems, e.g. high levels of performance, latency and timingconstraints, dependability and security.

Sensor Systems: accuracy and precision of attitude data is a major factor of the accuracy, precision and functionalperformance of the sensor in general. Also low latency is required for some types of sensor to accurately point thesensor or to steer its beam.

Effector Systems: dependability is required to mitigate the risks posed by systems designed to deliver an effect intothe environment; also low latency and a predictive motion model is required to accurately deliver an effect from aplatform experiencing translational and rotational acceleration in three dimensions.

Mission Critical Functions: require trusted information from an authenticated source.

The proposed C2INav data model seales to describe the information required for a broad range of mission critical applications — for instance the inclusion of time derivatives, accuracies and covariance at scalable compliance levels. The DDS PSM supports the latency, dependability, trust and authentication required for these critical functions through Quality of Service settings and the DDS Security standard.

## 0.2 Separation on a Shared Network

b) Discuss how the C2INAV can ensure data separation on a shared network (e.g. through the use of an access key associated with the data) from the Information Assurance point of view. Data separation for Information Assurance can be achieved through the use of secure protocols in the PSM – e.g. DDS Security for the DDS PSM or HTTPS for the GraphQL PSM.

# 0.3 Configuration by a Client

c) Submitters should discuss how clients of the C2INAV can configure the C2INAV implementation to meet their specific needs. This covers such areas as (not an exhaustive list): Data update frequency, Data latency, Data reliability and Security.

The request\_navigation\_data method allows clients to configure data update frequency at the PIM level. Use of DDS PSM allows a client to configure data update frequency, data latency, data reliability and security.

## 0.4 Monotonic Data-streams

*d)* Submitters should discuss how the C2INAV shall either ensure that the data arrives in sequence-(data monotonicity) or that the client of the C2INAV can determine that the data is not the latestvalue.

All reports from the Navigation System are time stamped, this allows a client to determine whether a report is 'outof sequence' at the PIM level. For the DDS PSM, presentation quality of service settings can be used to specifyordering as required.

# 0.5 Security Protection from Cyber Threats

e) Submitters should discuss how the C2INAV implementations can be protected from security and evber threats.

C2INAV implementations can be protected from security and cyber threats by using authentication, permissionenforcing and encryption protocols in the PSMs such as Secure DDS and HTTPS

Modular Data Model and Services separate information that potential has higher sensitivity (e.g. location), so-

Command and Control Interface for Navigation (C2INav),

protection may be applied with appropriate granularity.

Command and Control Interface for Navigation (C2INav), v1.1

# 1 Scope

This specification defines the interface between a Navigation System and Command and Control (C2) functions. It is concerned with the transfer of information regarding the location, movement, orientation, and local environment of the platform of which the Navigation System is a part to C2 functions.

# 2 Conformance

This specification defines conformance points to promote both applicability and interoperability. Services within the specification relating to control of the information reported and specialist parts of the data model are optional. The mandatory services within the interface relate to the transfer of basic information with the default behavior of the Navigation System.

<b>Conformance Point</b>	Data Model Packages	Service Methods	Rationale
Basic Reporting	Navigation Domain, Navigation Domain::Attitude, Navigation Domain::Position	write_rotational_attitude, write_position, write_velocity	Supports a system where the most commonly used attributes are reported with the Navigation System's default behavior without any C2 control
Reporting Control	(Basic Reporting plus) Navigation Domain::Reporting	(Basic Reporting plus) request_navigation_data	Supports a system where the C2 system can control the Navigation System's reporting of the most commonly used attributes
Specialist Data	All Packages	All Services	Supports the whole specification in the Navigation System's reporting of specialist data subject to control by the C2 System.

Table 2.11: Conformance Points for C2INav

- Network Time Protocol (www.ntp.org)
- Precision Time Protocol (IEEE 1588 http://www.ieee1588.com)

# 4 Terms and Definitions

For the purposes of this specification, the following terms and definitions apply.

- AB (Architecture Board)
- API (Application Programming Interface)
- BC (Business Committee)
- BCQ (Business Committee Questionnaire-)
- BoD (Board of Directors)
- CCM (CORBA Component Model)
- CMS (Combat Management System)
- CORBA (Common Object Request Broker Architecture)
- CWM (Common Warehouse Metamodel)
- DAIS (Data Acquisition from Industrial Systems)
- DDS (Data Distribution Service)
- EVOT (Enhanced View of Time)
- FTF (Finalization Task Force)
- GLONASS (Global Navigation Satellite System)
- GPS (Global Positioning System)
- IDL (Interface Definition Language)
- IFF (Interrogation, Friend or Foe)
- IIOP (Internet Inter-Orb Protocol)
- IPR (Intellectual Property Right)
- ISO (International Organization for Standardization)
- LOI (Letter of Intent)
- LORAN (Long Range Navigation)
- MDA (Model Driven Architecture)
- METOC (Meteorological and Oceanographic)
- MOF (Meta Object Facility)
- MQS (MQSeries)
- NNSI (Naval Navigation System Interface)
- NS (Naming Service)
- OARIS (Open Architecture Radar Interface Standard)
- ODF (Open Document Format)
- OMG (Object Management Group)
- PIM (Platform Independent Model)

- PSM (Platform Specific Model)
- P&P (Policies and Procedures of the OMG Technical Process)
- RFC (Request For Call)
- RFP (Request For Proposal)
- RTF (Revision Task Force)
- SLAM (Simultaneous Localization and Mapping)
- SOA (Service Oriented Architecture)
- SoaML (Service oriented architecture Modeling Language)
- SOLAS (Safety Of Life At Sea)
- TC (Technology Committee)
- TF (Task Force)
- UML (Unified Modeling Language)
- XMI (XML Metadata Interchange)
- XML (eXtensible Markup Language)

# 5 Symbols

No special symbols are introduced in this specification.

# 7 Command and Control Interface for Navigation Systems

# 7.1 Introduction

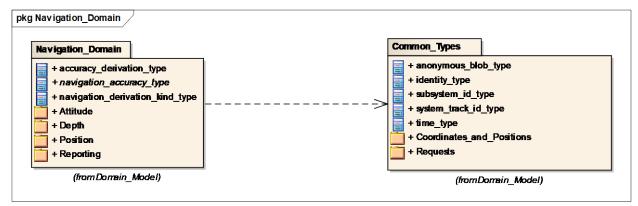

The specification is captured as an Enterprise Architect (EA) UML version 2.1 model; this document being automatically generated as a report from the model.

The UML model is an extension of the OARIS model and follows the same hierarchical structure and naming conventions; this model also has dependencies on the Common Types package defined by the OARIS model (as shown in Figure 7.1)Figure 7.1) as it reuses classes defined there. The classes re-used from the OARIS specification are shown on the class diagrams for the Domain Model. The general-purpose error handling service classes defined by OARIS are also re-used.

The C2INav model follows the OARIS model organization: there is a UML PIM data model (Navigation\_Domain) under the Domain\_Model package and a UML PIM for services and interfaces (Navigation\_Services) under the Service\_Interfaces package. The data model is organized by primary concerns for navigation information, for instance attitude or orientation versus absolute location in the environment, and also models the means of controlling reporting by a navigation system; a common abstraction for reporting is also modelled. The services and their interfaces model the means for a navigation system to report its data and a C2 system to control the characteristics of the navigation system's reporting.

Additionally, OARIS service interfaces defined for the Provide Subsystem Identification and Manage Subsystem Parameters use cases can be used by C2 Systems to discover and configure a Navigation System. (E.g<sub> $\tau$ </sub> choose to listen to a specific Navigation System having been informed of its latency and granularity characteristics).

C2INav follows OARIS modelling nomenclature whereby there are interfaces conceptually representing a CMS and a Subsystem for each use case. For C2INav, CMS should be read as representative of C2 Systems in general and Subsystem as being specifically a Navigation System.

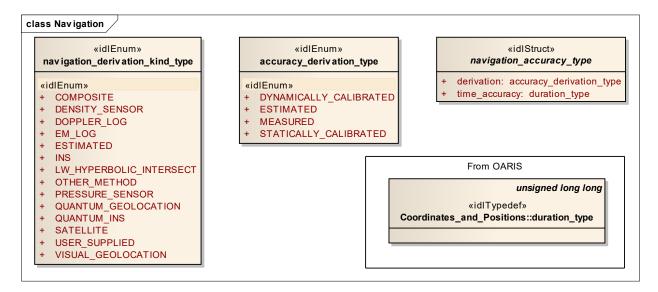

# 7.2 Navigation\_Domain

#### Parent Package: Domain\_Model

This package contains the Domain Models for the Navigation services. It is organised according to functionality: i.e<sub>7.2</sub> the modelling of attitude (the orientation and offset of the platform relative to its reported position), the platform's position (including velocity and acceleration), the depth of water the platform may be in and the reporting of this information.

### 7.2.1 accuracy\_derivation\_type

Type:IDLEnumPackage:Navigation\_DomainThe set of methods describing the provenance of the accuracy values

#### Table 7.1- Attributes of IDLEnum accuracy\_derivation\_type

Attribute	Notes
«idlEnum» DYNAMICALLY_CALIBRATED	The accuracy values have been calibrated using real data
	to derive accuracy values for particular instruments
	given particular environmental conditions - i.e
	accuracy values will in general vary over time for the
	same set of instruments.
«idlEnum» ESTIMATED	The values have been set using engineering judgement.
«idlEnum» MEASURED	The accuracy values have been measured using some
	dynamic process that is able to estimate the current
	performance of the instruments in use.
«idlEnum» STATICALLY_CALIBRATED	The accuracy values have been calibrated using real data
	to derive fixed accuracy values for particular
	instruments.

#### Table 7-1: Attributes of IDLEnum accuracy derivation type

### 7.2.2 navigation\_accuracy\_type

 Type:
 IDLStruct

 Package:
 Navigation\_Domain

 A base type for classes that report the accuracy of navigational measurements

#### Table 7.2- Attributes of IDLStruct navigation\_accuracy\_type

#### Table 7-2: Attributes of IDLStruct navigation\_accuracy\_type

Attribute	Notes
derivation accuracy_derivation_type	The provenance or method by which the accuracy values
	have been derived.
time_accuracy duration_type	The accuracy (represented as one standard deviation) of
	the time value.

### 7.2.3 navigation\_derivation\_kind\_type

 Type:
 IDLEnum

 Package:
 Navigation\_Domain

 This is the set of instrument types and other means by which navigation information can be derived.

#### Table 7.3 - Attributes of IDLEnum navigation\_derivation\_kind\_type

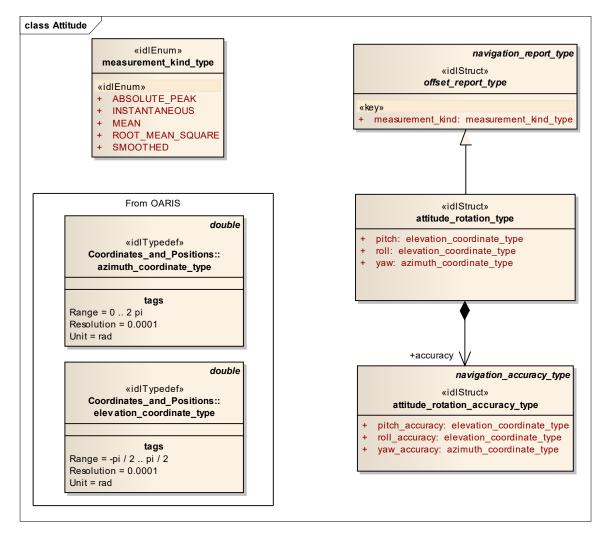

Attribute	Notes
«idlEnum» COMPOSITE	Information derived by fusing data from more than one of these types of derivation source.
«idlEnum» DENSITY_SENSOR	Information derived from an instrument that measures
	the (subsurface) sea or air density to estimate depth or
	altitude.
«idlEnum» DOPPLER_LOG	Information derived from an instrument that exploits the
	Doppler effect to measure speed relative to the
	immediate environment, particularly water.
«idlEnum» EM_LOG	Information derived from an instrument that exploits the
	electromagnetic dynamo effect (conductor moving
	through an electromagnetic field produces a proportional
	voltage) to measure speed relative to the immediate
	environment, particularly water.
«idlEnum» ESTIMATED	Information is estimated from previously measured
	values (e.g. dead-reckoning).
«idlEnum» INS	Information derived from instruments based on an
	Inertial Navigation System (e.g., Gyroscopes and
	Accelerometers)
«idlEnum» LW_HYPERBOLIC_INTERSECT	Navigation based on the intersection of hyperbolic
	curves derived from long wave radio signals from
	known ground stations with repeaters - e.g., LORAN B
	and C
«idlEnum» OTHER_METHOD	Information has been derived using some other
	technology.
«idlEnum» PRESSURE_SENSOR	Information derived from an instrument that measures
	the (subsurface) sea or air pressure to estimate depth or
	altitude.
«idlEnum» QUANTUM_GEOLOCATION	Information derived by sensing the Earth's gravitational
	and/or magnetic field and/or their gradients using single
	particle systems that exploit quantum effects.
«idlEnum» QUANTUM_INS	Information derived from instruments based on an
	Inertial Navigation System that measures acceleration
	using single particle systems that exploit quantum
	techniques.
«idlEnum» SATELLITE	Information derived from a satellite-based navigation
	system (e.g GPS and GLONASS)

Attribute	Notes
«idlEnum» USER_SUPPLIED	Information has been supplied by the user (e.g <sub><math>\tau</math></sub> manual
	entry from a non-integrated system).
«idlEnum» VISUAL_GEOLOCATION	Information derived by sensing the external environment
	and resolving position and orientation with reference to
	external data such as charts (e.g. SLAM techniques).

### 7.2.4 Attitude

#### Parent Package: Navigation\_Domain

This package contains classes to model the attitude of the platform. That is the orientation and offset of the platform relative to its reported position. This package provides a data model for services that relate to micro-scale precision, supporting precise location and orientation of an individual component of the platform.

#### Figure 7-3: Attitude (Logical diagram)

#### 7.2.4.1 attitude\_rotation\_accuracy\_type

Type: IDLStruct navigation\_accuracy\_type

#### Package: Attitude

This class encapsulates the error estimates associated with the platform's rotational attitude values. Accuracies are reported as one standard deviation.

#### Table 7.4 - Attributes of IDLStruct attitude\_rotation\_accuracy\_type

#### Table 7-4: Attributes of IDLStruct attitude rotation accuracy type

Attribute	Notes
<pre>pitch_accuracy elevation_coordinate_type</pre>	The accuracy of the pitch value to one standard
	deviation, The accuracy of the pitch value to one
	standard deviation,
roll_accuracy elevation_coordinate_type	The accuracy of the roll value to one standard-
	deviation, The accuracy of the roll value to one standard
	deviation,
<pre>yaw_accuracy azimuth_coordinate_type</pre>	The accuracy of the yaw value to one standard
	deviation, The accuracy of the yaw value to one standard
	deviation,

#### 7.2.4.2 attitude\_rotation\_type

Type: IDLStruct offset\_report\_type

Package: Attitude

This class encapsulates the instantaneous rotation of the platform from its nominal, at-rest orientation. Non-normative: typically\_due to the variable motion of the environment - sea, air, etc. - through which it is travelling.

#### Table 7.5 - Attributes of IDLStruct attitude\_rotation\_type

#### Table 7-5: Attributes of IDLStruct attitude\_rotation\_type

Attribute	Notes
pitch elevation_coordinate_type	The pitch of the platform, relative to its platform reference point in a vertical plane. It is the clockwise angle of rotation around the lateral axis (towards starboard/right) through the center of rotation. For sea systems, the angle from horizontal to the bow;
	for air systems, the angle from horizontal to the nose; for land systems, the angle from horizontal to the front.
roll elevation_coordinate_type	The roll of the platform, relative to its platform reference point in a vertical plane. It is the angle of rotation about the longitudinal axis through the center of rotation (front-to-back). The roll angle is defined as that of the at-rest horizontal through the platform's reference on the starboard side for sea and air systems and on the right (forward facing) for land systems.
yaw azimuth_coordinate_type	The yaw of the platform, relative to its platform reference point in a horizontal plane. It is the angle of rotation about the vertical axis through the center of rotation (top-to-bottom) relative to the platform's course. For sea systems, the angle to the bow; for air systems, the angle to the nose; for land systems, the angle to the front.

#### 7.2.4.3 measurement\_kind\_type

Type: IDLEnum

Package: Attitude

The kind of measurement relating to the statistical process applied to the quantities in question over time.

#### Table 7.6- Attributes of IDLEnum measurement\_kind\_type

#### Table 7-6: Attributes of IDLEnum measurement kind type

Attribute	Notes
«idlEnum» ABSOLUTE_PEAK	The maximum of the absolute value of the raw
	measurements over a complete cycle (a complete cycle
	is defined as the interval between local maxima).
«idlEnum» INSTANTANEOUS	The raw measurement at the stated time.
«idlEnum» MEAN	The arithmetic mean (average) of the raw measurements
	over a complete cycle (a complete cycle is defined as the
	interval between local maxima).
«idlEnum» ROOT_MEAN_SQUARE	The root mean square average of the raw measurements
	over a complete cycle (a complete cycle is defined as the
	interval between local maxima).
«idlEnum» SMOOTHED	The system's best estimate for the current value of the
	quantities based on recent raw measurements.

#### 7.2.4.4 offset\_report\_type

Type:IDLStruct navigation\_report\_typePackage:Attitude

This is the base type for the reporting of all information that is an offset from the platform's mean reported motion and its at-rest orientation; hence this includes attitude information. These reports are keyed on the statistical kind of measurement, enabling different views of cyclical motion to be reported.

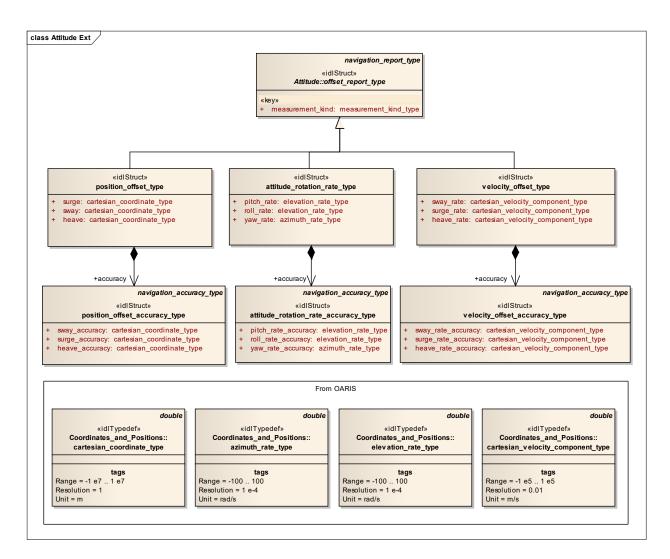

#### Table 7.7- Attributes of IDLStruct offset\_report\_type

#### Table 7-7: Attributes of IDLStruct offset report type

Attribute	Notes
«key» measurement_kind measurement_kind_type	The kind of measurement being reported.

#### 7.2.4.5 Attitude.Ext

Parent Package: Attitude

#### Figure 7.4 Attitude Ext (Logical diagram)

#### Figure 7-4: Attitude Ext (Logical diagram)

#### 7.2.4.5.1\_attitude\_rotation\_rate\_accuracy\_type

Type: IDLStruct navigation\_accuracy\_type

Package: Ext

This class encapsulates the error estimates associated with the platform's rotational attitude rate values. Accuracies are reported as one standard deviation.

Table 7.8 - Attributes of IDLStruct attitude\_rotation\_rate\_accuracy\_type

Table 7-8: Attributes of IDLStruct attitude rotation rate accuracy type

Attribute	Notes
<pre>pitch_rate_accuracy elevation_rate_type</pre>	The accuracy of the pitch rate value to one standard
	deviation, The accuracy of the pitch rate value to one
	standard deviation,
roll_rate_accuracy elevation_rate_type	The accuracy of the roll rate value to one standard
	deviation, The accuracy of the roll rate value to one
	standard deviation,
<pre>yaw_rate_accuracy azimuth_rate_type</pre>	The accuracy of the yaw rate value to one standard
	deviation, The accuracy of the yaw rate to one standard
	deviation,

#### 7.2.4.5.2\_attitude\_rotation\_rate\_type

Type:IDLStruct offset\_report\_typePackage:ExtThis class encapsulates the instantaneous rate of rotation of the platform (relative to the Earth).

#### Table 7.9 - Attributes of IDLStruct attitude\_rotation\_rate\_type

#### Table 7-9: Attributes of IDLStruct attitude rotation rate type

Attribute	Notes
<pre>pitch_rate elevation_rate_type</pre>	The pitch rate of the platform, relative to its platform
	reference point in a vertical plane. It is the rate of
	change of angle of rotation around the lateral axis
	(towards starboard/right) through the center of rotation.
	For sea systems, the angle to the bow;
	for air systems, the angle to the nose;
	for land systems, the angle to the front.
roll_rate elevation_rate_type	The roll rate of the platform, relative to its platform
	reference point in a vertical plane. It is the rate of
	change of the angle of rotation about the longitudinal
	axis through the center of rotation (front-to-back).
	The roll angle is defined as that of the at-rest horizontal
	through the platform's reference on the starboard side for
	sea and air systems and on the right (forward facing) for
	land systems.
<pre>yaw_rate azimuth_rate_type</pre>	The yaw rate of the platform, relative to its platform
	reference point in a horizontal plane. It is the rate of
	change of the angle of rotation about the vertical axis
	through the center of rotation (top-to-bottom) relative to
	the platform's course.
	For sea systems, the angle to the bow;
	for air systems, the angle to the nose;
	for land systems, the angle to the front.

#### 7.2.4.5.3 position\_offset\_accuracy\_type

Type:IDLStruct navigation\_accuracy\_typePackage:Ext

This class encapsulates the error estimates associated with the platform's attitude offset values. Accuracies are reported as one standard deviation.

#### Table 7.10 - Attributes of IDLStruct position\_offset\_accuracy\_type

#### Table 7-10: Attributes of IDLStruct position\_offset\_accuracy\_type

Attribute	Notes
<pre>sway_accuracy cartesian_coordinate_type</pre>	The accuracy of the lateral value to one standard
	deviation, The accuracy of the lateral value to one
	standard deviation,
<pre>surge_accuracy cartesian_coordinate_type</pre>	The accuracy of the longitudinal value to one standard
	deviation, The accuracy of the longitudinal value to one
	standard deviation,
heave_accuracy cartesian_coordinate_type	The accuracy of the vertical value to one standard
	deviation, The accuracy of the vertical value to one
	standard deviation,

#### 7.2.4.5.4 position\_offset\_type

Type: IDLStruct offset\_report\_type Ext

Package:

This class encapsulates the instantaneous offset of the platform from its mean reported motion. Non-normative: typically, due to the variable motion of the environment - sea, air, etc. - through which it is travelling.

#### Table 7.11 - Attributes of IDLStruct position\_offset\_type

#### Table 7-11: Attributes of IDLStruct position offset type

Attribute	Notes
sway cartesian_coordinate_type	The instantaneous offset from mean motion on the
	lateral horizontal axis through the platform reference
	point.
	For sea and air systems port-starboard - starboard
	positive.
	For land systems side-to-side - right positive when
	facing forwards.
surge cartesian_coordinate_type	The instantaneous offset from mean motion on the
	longitudinal horizontal axis through the platform
	reference point.
	For sea systems stern-bow - bow positive.
	For air systems tail-nose - nose positive.
	For land systems back-to-front - front positive.
heave cartesian_coordinate_type	The instantaneous offset from mean motion on the
	vertical axis through the platform reference point.
	For sea systems keel-mast - mast positive.
	For air and land systems bottom-to-top - top positive.

#### 7.2.4.5.5\_velocity\_offset\_accuracy\_type

Ext

Type: IDLStruct navigation accuracy type

Package:

This class encapsulates the error estimates associated with the platform's attitude offset rate values. Accuracies are reported as one standard deviation.

#### Table 7.12 - Attributes of IDLStruct velocity\_offset\_accuracy\_type

Table 7-12: Attributes of IDLStruct velocity offset accuracy type
---

Attribute	Notes
sway_rate_accuracy	The accuracy of the lateral rate value to one standard
cartesian_velocity_component_type	deviation,
surge_rate_accuracy	The accuracy of the longitudinal rate value to one
cartesian_velocity_component_type	standard deviation,

Attribute	Notes
heave_rate_accuracy	The accuracy of the vertical rate value to one standard
cartesian_velocity_component_type	deviation,

#### 7.2.4.5.6 velocity\_offset\_type

 Type:
 IDLStruct offset\_report\_type

 Package:
 Ext

 This class encapsulates the instantaneous rate of change of the offset of the platform from its mean reported motion.

Table 7.13 - Attributes of IDLStruct velocity\_offset\_type

#### Table 7-13: Attributes of IDLStruct velocity offset type

Attribute	Notes
<pre>sway_rate cartesian_velocity_component_type</pre>	The instantaneous rate of change of the offset from
	mean motion on the lateral horizontal axis through the
	platform reference point.
	For sea and air systems port-starboard - starboard
	positive.
	For land systems side-to-side - right positive when
	facing forwards.
<pre>surge_rate cartesian_velocity_component_type</pre>	The instantaneous rate of change of the offset from
	mean motion on the longitudinal horizontal axis through
	the platform reference point.
	For sea systems stern-bow - bow positive.
	For air systems tail-nose - nose positive.
	For land systems back-to-front - front positive.
heave_rate cartesian_velocity_component_type	The instantaneous rate of change of the offset from
	mean motion on the vertical axis through the platform
	reference point.
	For sea systems keel-mast - mast positive
	For air and land systems bottom-to-top - top positive.

### 7.2.5 Depth

**Parent Package:** Navigation\_Domain This package contains classes to model of the depth of water the platform may be in.

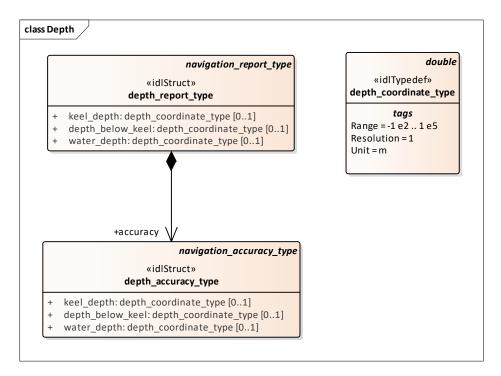

Figure 7.5 Depth (Logical diagram) 7-5: Depth (Logical diagram)

#### 7.2.5.1 depth\_coordinate\_type

 Type:
 IDLTypeDef double

 Package:
 Depth

 Measured positive down in meters. c.f. altitude\_coordinate\_type in OARIS Common\_Types package.

 Range = -1 e2 .. 1 e5

 Resolution = 1

 Unit = m

#### 7.2.5.2 depth\_report\_type

Type:IDLStructPackage:DepthUsed by waterborne craft to report depth information.

#### Table 7.14 - Attributes of IDLStruct depth\_report\_type

#### Table 7-14: Attributes of IDLStruct depth\_report\_type

Attribute	Notes
<b>depth_below_keel</b> depth_coordinate_type [01]	The depth of the bed below the keel.
<b>keel_depth</b> depth_coordinate_type [01]	The depth of the keel below the surface of the water.
water_depth depth_coordinate_type [01]	The depth of the bed below the water's surface.

#### 7.2.5.3 depth\_accuracy\_type

Type:IDLStructPackage:DepthThe accuracy of the platform's depth report

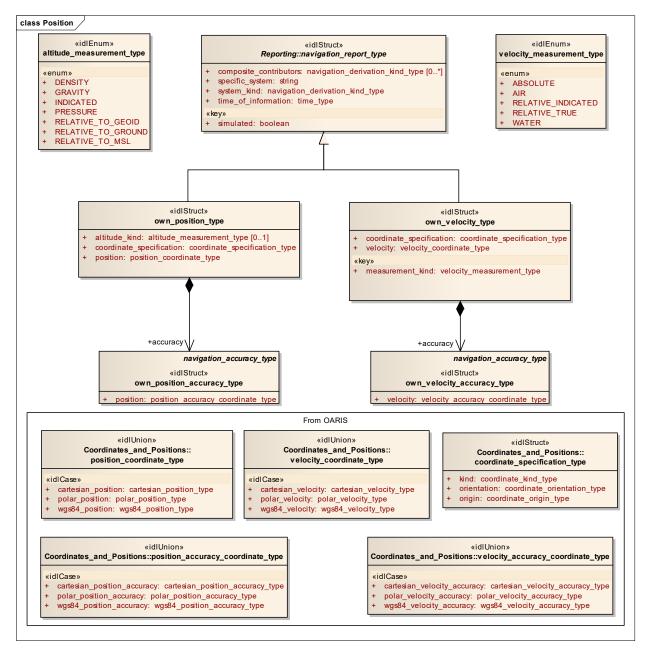

Attribute	Notes
depth_below_keel depth_coordinate_type [01]	The accuracy of the depth below keel measurement.
keel_depth_depth_coordinate_type [01]	The accuracy of the keel depth measurement.
water_depth_depth_coordinate_type [01]	The accuracy of the water depth measurement.

Table 7.15-7-15: Attributes of IDLStructIDLStruct depth\_accuracy\_type

### 7.2.6 Position

#### Parent Package: Navigation\_Domain

This package contains classes to model the platform's position including height/depth/altitude, velocity and acceleration. This package provides a data model for services that relate to macro-scale precision, supporting the location and motion of the platform as a point entity within its environment.

#### Figure 7.6 Position (Logical diagram)

#### Figure 7-6: Position (Logical diagram)

#### 7.2.6.1 altitude\_measurement\_type

Type: IDLEnum

Package: Position

This class indicates the semantics of the height attribute. It describes how the reported height (or depth) has been derived.

#### \_Table 7.16-7-16: Attributes of IDLEnum altitude\_measurement\_typeIDLEnum altitude measurement type

Attribute	Notes
«enum» DENSITY	It is reporting a measurement based on local density (of
	air or water).
«enum» GRAVITY	It is reporting a measurement based on local gravity.
«enum» INDICATED	As reported by the platform's own altimeter (or depth
	sensor). Typically, but not necessarily this is pressure
	related. The precise option rather than this one should be
	reported if known.
«enum» PRESSURE	It is derived from a pressure sensor.
«enum» RELATIVE_TO_GEOID	It is reporting a measurement made relative to the
	GEOID (WGS84) - e.g. using a satellite navigation
	system.
«enum» RELATIVE_TO_GROUND	The distance to the ground below (or above for
	underground systems) is being measured and reported.
«enum» RELATIVE_TO_MSL	It is reporting a measurement made relative to mean sea
	level.

#### 7.2.6.2 own\_position\_accuracy\_type

Type:IDLStruct navigation\_accuracy\_typePackage:Position

The accuracy of the platform's own position report.

#### \_Table 7.17-7-17: Attributes of IDLStruct own\_position\_accuracy\_typeIDLStruct own position accuracy type

Attribute	Notes
<pre>position position_accuracy_coordinate_type</pre>	The accuracy of the reported position in the chosen
	coordinate system for reporting. This should be the same
	choice as for the position itself.

#### 7.2.6.3 own\_position\_type

Type:IDLStruct navigation\_report\_typePackage:PositionThe platform's own position report.

#### \_Table 7.18-7-18: Attributes of IDLStruct own\_position\_type

Attribute	Notes
<b>altitude_kind</b> altitude_measurement_type [01]	Describes the semantics of the position's altitude
	attribute. Optional: omit only if altitude is not reported.

Attribute	Notes
coordinate_specification	The specification of the coordinate system used for
coordinate_specification_type	reporting own position and its accuracy. In most use cases Cartesian or WGS84, Earth Referenced choices are expected; in some use cases other choices for reporting relative to some known datum could be used.
<pre>position position_coordinate_type</pre>	The position of the reporting platform in the chosen
	coordinate system for reporting.

#### 7.2.6.4 own\_velocity\_accuracy\_type

Type:IDLStruct navigation\_accuracy\_typePackage:PositionThe accuracy of the platform's own velocity report.

#### \_Table 7.19-7-19: Attributes of IDLStruct own\_velocity\_accuracy\_typeIDLStruct own\_velocity\_accuracy\_type

Attribute	Notes
velocity velocity_accuracy_coordinate_type	The accuracy of the reporting platform's velocity with
	reference to the coordinate system used for-
	reportingThe accuracy of the reporting platform's
	velocity with reference to the coordinate system used for
	reporting.

#### 7.2.6.5 own\_velocity\_type

Type:IDLStruct navigation\_report\_typePackage:PositionThe platform's own velocity report.

#### \_Table 7.20-7-20: Attributes of IDLStruct own\_velocity\_typeIDLStruct own\_velocity\_type

Attribute	Notes
coordinate_specification	The specification of the coordinate system used for
coordinate_specification_type	reporting own velocity and its accuracy. In most use
	cases Cartesian or WGS84, Earth Referenced choices
	are expected; in some use cases other choices for
	reporting relative to some known datum could be used.
<pre>«key» measurement_kind velocity_measurement_type</pre>	The definition of the velocity being measured.
velocity velocity_coordinate_type	The velocity of the reporting platform with reference to
	the chosen coordinate system for reporting.

#### 7.2.6.6 velocity\_measurement\_type

Type:IDLEnumPackage:PositionThis class defines what it is that is having its velocity measured.

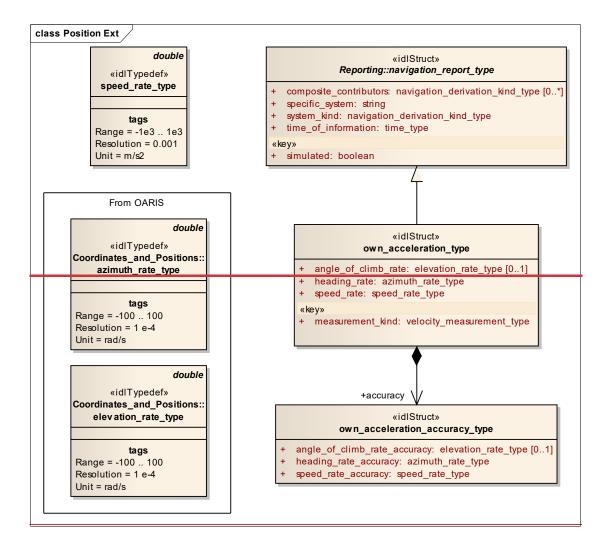

#### \_Table 7.21-7-21: Attributes of IDLEnum velocity\_measurement\_typeIDLEnum velocity measurement\_type

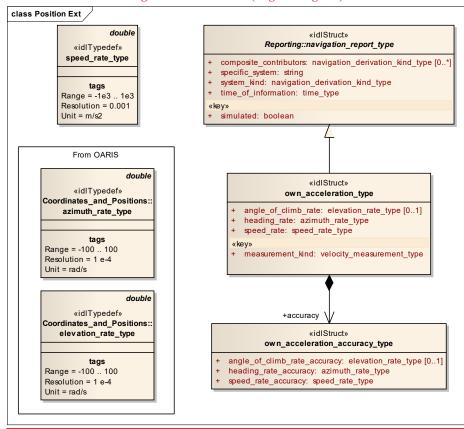

Attribute	Notes
«enum» ABSOLUTE	The measurement is of absolute velocity (i.e. relative to
	the Earth).

Attribute	Notes
«enum» AIR	The measurement is of the air in the local environment
	itself (i.e. the wind speed). This is only to be reported as
	a true value; i.e. it is not be based on a pressure-based
	'indicated' sensor reading for relative air speed that isn't
	corrected for density.
«enum» RELATIVE_INDICATED	The measurement is of velocity relative to the
	environment (i.e., water or air) using an indirect
	approximation such as air pressure.
«enum» <b>RELATIVE_TRUE</b>	The measurement is of velocity relative to the
	environment (i.e., water or air) using a method that is
	not subject to systematic approximation error as is the
	case with 'Indicated Air Speed' as measured by a
	pressure sensor.
«enum» WATER	The measurement is of the water current in the local
	environment itself (i.e. the movement of the water).

#### 7.2.6.7 Position.Ext

Parent Package: Position

#### Figure 7.7 Position Ext (Logical diagram)

#### Figure 7-7: Position Ext (Logical diagram)

#### 7.2.6.7.1 own\_acceleration\_accuracy\_type

Type:IDLStructPackage:Ext

The accuracy of the platform's own acceleration report.

# \_Table 7.22\_7-22: Attributes of IDLStruct own\_acceleration\_accuracy\_typeIDLStruct

own acceleration accuracy type	
Attribute	Notes
angle_of_climb_rate_accuracy elevation_rate_type	The accuracy of the angle of climb rate - 1 standard
[01]	deviation
heading_rate_accuracy azimuth_rate_type	The accuracy of the heading rate - 1 standard deviation
<pre>speed_rate_accuracy speed_rate_type</pre>	The accuracy of the speed rate - 1 standard deviation

#### 7.2.6.7.2 own\_acceleration\_type

Type:IDLStruct navigation\_report\_typePackage:Ext

The platform's reporting of its change in velocity

#### Table 7.23 - 7-23: Attributes of IDLStruct own\_acceleration\_type IDLStruct own acceleration type

Attribute	Notes
angle_of_climb_rate elevation_rate_type [01]	The rate at which the angle of climb is changing

Command and Control Interface for Navigation (C2INav),

Attribute	Notes
heading_rate azimuth_rate_type	The rate at which the heading is changing
«key» measurement_kind velocity_measurement_type	The definition of the acceleration (change in velocity)
	being measured.
<pre>speed_rate speed_rate_type</pre>	The rate at which the speed is changing

#### 7.2.6.7.3 speed\_rate\_type

Type:IDLTypeDef doublePackage:ExtThe rate of change of speed in meters per second-squaredRange = -1e3 ... 1e3Resolution = 0.001Unit = m/s2

### 7.2.7 Reporting

Parent Package: Navigation\_Domain

This package contains classes that provide a common abstraction for the reporting of navigation information.

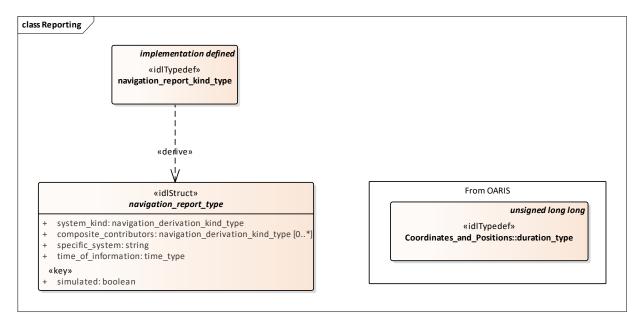

Figure 7.87-8: Reporting (Logical diagram)-

#### 7.2.7.1 navigation\_report\_kind\_type

**Type:** IDLTypeDef implementation defined

Package: Reporting

This class is used in service selection to specify the type of navigation report being requested. Its implementation is determined by the PSM mapping.

#### 7.2.7.2 navigation\_report\_type

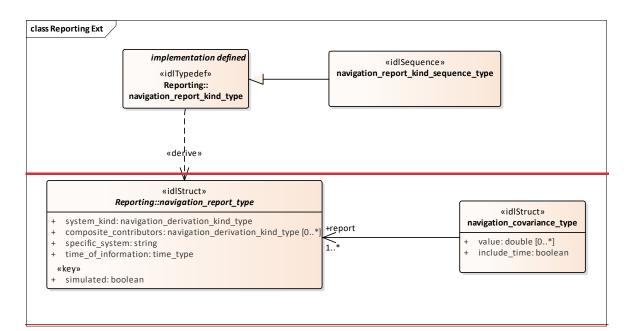

Туре:	IDLStruct
Package:	Reporting
A base type f	or classes that report navigational measurements

\_Table 7.24-7-24: Attributes of IDLStruct navigation\_report\_typeIDLStruct navigation\_report\_type

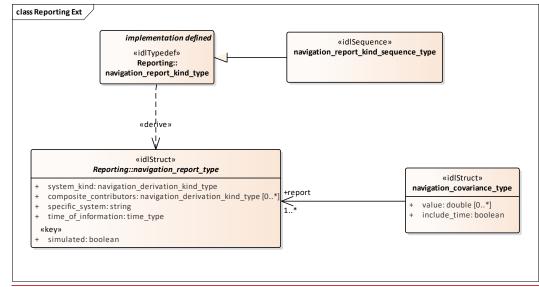

Attribute	Notes
composite_contributors	An optional set of contributing sensor kinds that have
navigation_derivation_kind_type [0*]	been used to derive the report. This set is defined when
	the system_kind is COMPOSITE.
«key» simulated boolean	Whether the information has been simulated - e.g. for
	operator training.
specific_system string	The specific system employed - e.g. GPS, LORAN-B
system_kind navigation_derivation_kind_type	The generic type of navigation system used.
time_of_information time_type	The time for which the report values are valid.

#### 7.2.7.3 Reporting.Ext

Parent Package: Reporting

#### Figure 7.9 Reporting Ext (Logical diagram)

#### Figure 7-9: Reporting Ext (Logical diagram)

#### 7.2.7.3.1 navigation\_covariance\_type

Type: IDLStruct

Package: Ext

This class encapsulates the covariance between the measurements in one or more navigation\_report\_instances. The rows and columns of the triangular covariance matrix relate to the (3) quantities from the first instance, optionally the (3) quantities from each of the further instances and finally, optionally, time.

This, for instance allows the covariance between rotational attitude and position to be represented or the covariance between rotational attitude, position, all their rates of change and time.

#### Table 7.15 - Attributes of IDLStruct navigation\_covariance\_type

#### Table 7-25: Attributes of IDLStruct navigation covariance type

Attribute	Notes
include_time boolean	Whether time is included in the covariance - it is always
	represented in the last row and column.
value double [0*]	The content of the triangular covariance matrix omitting
	symmetric (duplicate) values. Valid lengths are
	sum(n=1*; 3n) and $sum(n=1*; 3n+1)$ . The sequence
	starts 6, 10, 21, 28, 45,

#### 7.2.7.3.2\_navigation\_report\_kind\_sequence\_type

Type: IDLSequence navigation\_report\_kind\_type

Package:

A sequence of navigation report kinds. It is expected that this class will map to implementation specific mechanisms in PSMs.

### 7.2.8 Reporting

Parent Package: Navigation\_Domain

Ext

This package contains classes that encapsulate the information that can parameterize the reporting of navigation information.

	«idlStru	
	navigation_rec	
+ measu + velocit	+ measurement_kind: measurement_kind_type [01]	

Figure 7.107-10: Requests (Logical diagram)-

#### 7.2.8.1 navigation\_request\_type

Type: IDLStruct

Package: Reporting

This class is used to construct requests for data to a navigation system and also to cancel such requests. When used to cancel requests the interval should be omitted by the C2 System and ignored by the Navigation System.

\_Table 7.6-7-26: Attributes of IDLStruct navigation\_request\_typeIDLStruct navigation\_request\_type

Attribute	Notes
interval duration_type [01]	The nominal interval between reports being requested.
	Omit to request at the default rate for the navigation
	system.
<b>measurement_kind</b> measurement_kind_type [01]	The kind of statistical reporting of the measurements
	being requested. Omit to request all measurement kinds
	supported by the navigation system.
report_kind navigation_report_kind_type	The type of data to be reported in response to the
	request.
velocity_measurement velocity_measurement_type	The type of velocity measurement requested. This is
[01]	only valid if the report kind indicates velocity. Omit to
	request all velocity measurements supported by the
	navigation system.

# 7.3 Navigation\_Services

#### Parent Package: Service\_Interfaces

The Navigation Services define the methods for a Navigation System to report its data to a C2 System and for a C2 System to control the rate and content of the data reported by a Navigation System. The usage of these services is presented in a series of sequence diagrams aligned with this specification's conformance points from section 2; basic flows describe normal operation and alternative flows describe error handling.

Navigation\_CMS and Navigation\_Sub are the interfaces to be implemented by C2 (including CMS) and Navigation System components respectively.

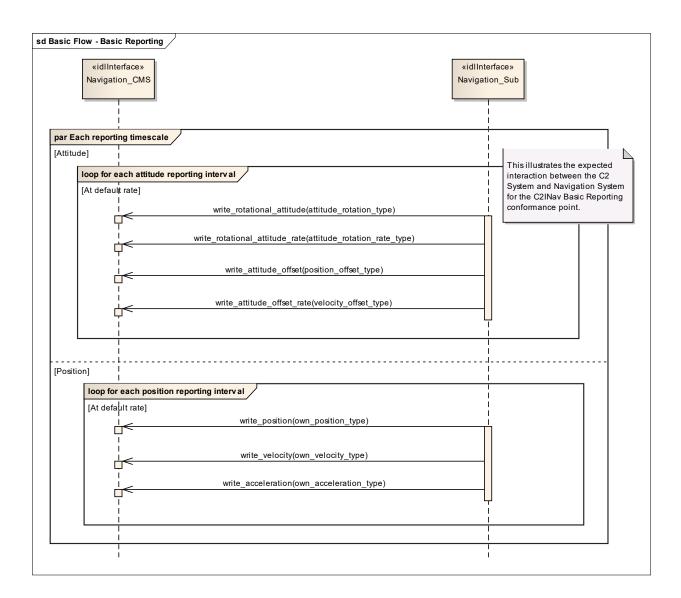

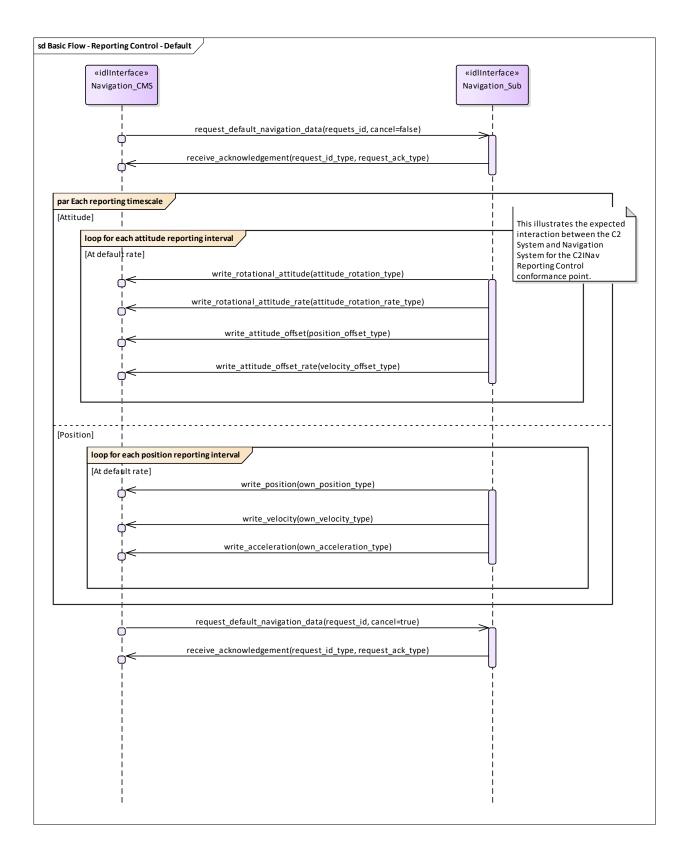

Figure 7.11 Basic Flow - Basic Reporting (Sequence diagram)

## Figure 7-17: Service Interface Navigation (Logical diagram)

## 7.3.1 Navigation\_CMS

Type:IDLInterface common\_use\_case\_interfacePackage:Navigation\_ServicesThe interface implemented by C2 components to consume C2INav services

## \_Table 7.27-7-27: Methods of IDLInterface Navigation\_CMSIDLInterface Navigation\_CMS

Method	Notes	Parameters
write_acceleration()		own_acceleration_type acceleration
write_attitude_offset()		position_offset_type <b>offset</b>
write_attitude_offset_rate()		velocity_offset_type rate
write_covariance()	The reported covariance between the selected quantities.	navigation_covariance_type covariance
write_depth()		depth_report_type depth
write_position()		own_position_type <b>position</b>
write_rotational_attitude()		attitude_rotation_type rotation
write_rotational_attitude_rate()		attitude_rotation_rate_type rate
write_velocity()		own_velocity_type velocity

## 7.3.2 Navigation\_Sub

Type: IDLInterface

Package: Navigation\_Services

The interface implemented by a navigation system to provide C2INav services.

Method	Notes	Parameters
request_covariance()	Requests the covariance between a	request_id_type request_id
	chosen set of quantities to be	navigation_report_kind_sequence_ty
	reported. The covariance is to be	pe <b>report_kinds</b>
	reported at the fastest reporting rate	boolean <b>cancel</b>
	of the chosen quantities. Can also	
	cancel requests to the navigation	
	system to send the particular	
	covariance information.	
request_default_navigation_data()	Request the navigation system to	request_id_type request_id
	send all its available navigational	boolean <b>cancel</b>
	information at the navigation	
	system's default rate for the data.	
	Where the reported data can have	
	different statistical representations	
	(measurement kinds) all forms	
	supported by the navigation	
	subsystem are reported at the	
	navigation system's default rate for	
	that measurement and report kind.	
	Can also cancel requests to the	
	navigation system to send any of its	
	available navigational information.	
request_custom_navigation_data()	Request the navigation system to	request_id_type request_id
	send a particular kind of navigation	navigation_request_type request
	report with specified measurement	boolean <b>cancel</b>
	types at a configurable interval. If	
	the data is already being reported	
	then this request updates the interval	
	at which it is reported (or sets it to	
	the navigation system's default rate);	
	it does not act cumulatively on	
	existing data reporting. Can also	
	cancel requests to the navigation	
	system to send any of its available	
	navigational information.	

\_Table 7.28-7-28: Methods of IDLInterface Navigation\_SubIDLInterface Navigation Sub

# 8 Domain Model Platform-Specific Models

# 8.1 DDS PSM

The DDS Data Model PSM defines a set of IDL files for the Data Model packages defined by the PIM. Topic types (i.e<sub>7.1</sub> IDL structs with keys) are defined for those IDL struct stereotyped classes that classify a single parameter on an interface method. This avoids redundant indirection. Comments are added to the IDL files to reflect the mapping rules below.

IDL types referred to by this PSM but defined by OARIS are to be found in the DDS PSM files for the OARIS specification. This specification depends upon Common\_Types.idl, Coordinates\_and\_Positions.idl and TimeBase.idl.

The detailed rules for the MDA code generation from the Data Model PIM to the DDS PSM IDL are as follows:

- The PIM attributes are mapped to IDL attributes;
- Optional attributes are mapped to a union type with a single member present when the exists case attribute is true;
- Collections in the PIM are mapped to IDL sequences;
- Specialization / Generalization PIM relationships are mapped to in-lined base type attributes.
- Navigable association to topic instance types are mapped to a key value, or set of values defined by a struct, where there are multiple keys. Where the association is to a generalization a union of the possible key types of the specializations is used. Unions and supporting enumerations are defined irrespective of the existence of associations to use them. One-to-many associations map to a bounded sequence of such values.

# 8.2 GraphQL PSM

The GraphQL Data Model PSM defines a single combined schema file for the Data Model and Service Modeldefined by the PIM.

The detailed rules for the MDA code generation from the Data Model PIM to the DDS PSM IDL are as follows:

- The PIM attributes are mapped to GraphQL type attributes;
- Mandatory attributes are mapped to a mandatory GraphQL attributes with an exclamation mark '!';
- Optional attributes are mapped to an optional GraphQL attributes without an exclamation mark.
- Collections in the PIM are mapped to GraphQL sequences;
- Aggregation and compositions are mapped to GraphQL attributes;
- Specialization / Generalization PIM relationships are mapped to IDL unions. Generalization classes that have attributes are mapped to a GraphQL type containing a base GraphQL type for its common attributes and a variants union for the specialization attributes.
- Navigable associations to topic instance types are mapped to a key value, or set of values defined by a GraphQL type, where there are multiple keys. Where the association is to a generalization a union of the possible key types of the specializations is used. Unions and supporting enumerations are defined irrespective of the existence of associations to use them. One-to-many associations map to a bounded sequence of such values.

# 9 Service Model Platform Specific Models

# 9.1 DDS PSM

The DDS Services PSM defines IDL files for each package defined in the Services PIM. For each method on each interface class an IDL struct for a DDS topic named for the method is generated; each parameter is mapped to an attribute of the IDL struct. This is unless there is only one attribute (of IDL struct stereotype) in which case the topic type is defined in the Domain Model (i.e., it corresponds to the parameter's class). Note that the PIM only defines in parameters, there are no return parameters defined and all methods have at least one parameter.

The DDS PSM maps the request\_all\_navigation\_data and request\_navigation\_data method to the DDS discovery, publish and subscribe functionality. Consequently, these methods are not explicitly defined by the DDS IDL.

# 9.2 GraphQL PSM

The GraphQL Data Model PSM defines a single combined schema file for the Data Model and Service Modeldefined by the PIM.

The schema supports GraphQL clients for the interfaces defined for the CMS and Subsystem components in the Service Model PIM. Mutations are used to invoke PIM interface methods; queries and subscriptions are used to process those invocations.

The PSM method for connecting to other components is through the underlying HTTPS web service connection. Web-sockets are used for subscription callbacks.

Specific rules for the MDA code generation from the Service Model PIM to the GraphQL PSM IDL are as follows:

- Each interface method in the Service Model is mapped to a (query) type, an input type and update type based on the method parameters; these are for queries, mutations, and subscriptions respectively.
- To invoke a method a client makes a mutation.
- To process a method a client makes a subscription or query.
- The GraphQL schema Query type supports queries for any combination of interface methods in the Service Model.
- The GraphQL schema Mutation type supports invocation of single or multiple instances of any combination of interface methods in the Service Model.
- The GraphQL schema Subscription type supports subscription for any combination of interface methods in the Service Model.
- The GraphQL PSM maps the request\_all\_navigation\_data and request\_navigation\_data methods to the GraphQL subscription types.
