USE OF SPECIFICATION - TERMS, CONDITIONS & NOTICES

The material in this document details an Object Management Group specification in accordance with the terms, conditions and notices set forth below. This document does not represent a commitment to implement any portion of this specification in any company's products. The information contained in this document is subject to change without notice.

LICENSES

The companies listed above have granted to the Object Management Group, Inc. (OMG) a nonexclusive, royalty-free, paid up, worldwide license to copy and distribute this document and to modify this document and distribute copies of the modified version. Each of the copyright holders listed above has agreed that no person shall be deemed to have infringed the copyright in the included material of any such copyright holder by reason of having used the specification set forth herein or having conformed any computer software to the specification.

Subject to all of the terms and conditions below, the owners of the copyright in this specification hereby grant you a fully-paid up, non-exclusive, nontransferable, perpetual, worldwide license (without the right to sublicense), to use this specification to create and distribute software and special purpose specifications that are based upon this specification, and to use, copy, and distribute this specification as provided under the Copyright Act; provided that: (1) both the copyright notice identified above and this permission notice appear on any copies of this specification; (2) the use of the specifications is for informational purposes and will not be copied or posted on any network computer or broadcast in any media and will not be otherwise resold or transferred for commercial purposes; and (3) no modifications are made to this specification. This limited permission automatically terminates without notice if you breach any of these terms or conditions. Upon termination, you will destroy immediately any copies of the specifications in your possession or control.

PATENTS

The attention of adopters is directed to the possibility that compliance with or adoption of OMG specifications may require use of an invention covered by patent rights. OMG shall not be responsible for identifying patents for which a license may be required by any OMG specification, or for conducting legal inquiries into the legal validity or scope of those patents that are brought to its attention. OMG specifications are prospective and advisory only. Prospective users are responsible for protecting themselves against liability for infringement of patents.

GENERAL USE RESTRICTIONS

Any unauthorized use of this specification may violate copyright laws, trademark laws, and communications regulations and statutes. This document contains information which is protected by copyright. All Rights Reserved. No part of this work covered by copyright herein may be reproduced or used in any form or by any means--graphic, electronic, or mechanical, including photocopying, recording, taping, or information storage and retrieval systems--without permission of the copyright owner.

DISCLAIMER OF WARRANTY

WHILE THIS PUBLICATION IS BELIEVED TO BE ACCURATE, IT IS PROVIDED "AS IS" AND MAY CONTAIN ERRORS OR MISPRINTS. THE OBJECT MANAGEMENT GROUP AND THE COMPANIES LISTED ABOVE MAKE NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARD TO THIS PUBLICATION, INCLUDING BUT NOT LIMITED TO ANY WARRANTY OF TITLE OR
OWNERSHIP, IMPLIED WARRANTY OF MERCHANTABILITY OR WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE OR USE. IN NO EVENT SHALL THE OBJECT MANAGEMENT GROUP OR ANY OF THE COMPANIES LISTED ABOVE BE LIABLE FOR ERRORS CONTAINED HEREIN OR FOR DIRECT, INDIRECT, INCIDENTAL, SPECIAL, CONSEQUENTIAL, RELIANCE OR COVER DAMAGES, INCLUDING LOSS OF PROFITS, REVENUE, DATA OR USE, INCURRED BY ANY USER OR ANY THIRD PARTY IN CONNECTION WITH THE FURNISHING, PERFORMANCE, OR USE OF THIS MATERIAL, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

The entire risk as to the quality and performance of software developed using this specification is borne by you. This disclaimer of warranty constitutes an essential part of the license granted to you to use this specification.

RESTRICTED RIGHTS LEGEND

Use, duplication or disclosure by the U.S. Government is subject to the restrictions set forth in subparagraph (c) (1) (ii) of The Rights in Technical Data and Computer Software Clause at DFARS 252.227-7013 or in subparagraph (c)(1) and (2) of the Commercial Computer Software - Restricted Rights clauses at 48 C.F.R. 52.227-19 or as specified in 48 C.F.R. 227-7202-2 of the DoD F.A.R. Supplement and its successors, or as specified in 48 C.F.R. 12.212 of the Federal Acquisition Regulations and its successors, as applicable. The specification copyright owners are as indicated above and may be contacted through the Object Management Group, 109 Highland Avenue, Needham, MA 02494, U.S.A.

TRADEMARKS

For a complete list of trademarks, see: https://www.omg.org/legal/tm_list.htm. All other products or company names mentioned are used for identification purposes only, and may be trademarks of their respective owners.

COMPLIANCE

The copyright holders listed above acknowledge that the Object Management Group (acting itself or through its designees) is and shall at all times be the sole entity that may authorize developers, suppliers and sellers of computer software to use certification marks, trademarks or other special designations to indicate compliance with these materials.

Software developed under the terms of this license may claim compliance or conformance with this specification if and only if the software compliance is of a nature fully matching the applicable compliance points as stated in the specification. Software developed only partially matching the applicable compliance points may claim only that the software was based on this specification, but may not claim compliance or conformance with this specification. In the event that testing suites are implemented or approved by Object Management Group, Inc., software developed using this specification may claim compliance or conformance with the specification only if the software satisfactorily completes the testing suites.
OMG’S ISSUE REPORTING PROCEDURE

All OMG specifications are subject to continuous review and improvement. As part of this process we encourage readers to report any ambiguities, inconsistencies, or inaccuracies they may find by completing the Issue Reporting Form listed on the main web page https://www.omg.org, under Documents, Report a Bug/Issue.
# Table of Contents

0 Preface ......................................................................................................................... 23
1 Scope ............................................................................................................................ 1
2 Conformance .................................................................................................................. 3
3 Normative References ..................................................................................................... 5
4 Terms and Definitions ...................................................................................................... 7
5 Symbols ........................................................................................................................... 9
6 Introduction .................................................................................................................... 11
   6.1 Mapping Approach ................................................................................................. 11
   6.2 Acknowledgements ................................................................................................. 11
7 Mappings ......................................................................................................................... 13
   7.1 Overview ................................................................................................................ 13
   7.2 Foundations ............................................................................................................ 13
      7.2.1 Overview ......................................................................................................... 13
      7.2.2 Foundational class specifications .................................................................... 14
         7.2.2.1 Factory .................................................................................................... 14
         7.2.2.2 Initializer ............................................................................................... 14
         7.2.2.3 MainMapping ......................................................................................... 14
         7.2.2.4 Mapping ............................................................................................... 14
         7.2.2.5 UniqueMapping ..................................................................................... 16
    7.3 Mapping Helper and Library .................................................................................... 16
       7.3.1 Helper ............................................................................................................ 16
       7.3.2 SysML v1 Library ......................................................................................... 22
7.4 Initializers .................................................................................................................. 25
   7.4.1 Overview ............................................................................................................ 25
   7.4.2 Mapping Specifications ....................................................................................... 25
      7.4.2.1 KerML Initializers ..................................................................................... 25
         7.4.2.1.1 AnnotatingElement_Init .................................................................. 25
         7.4.2.1.2 Annotation_Init .............................................................................. 25
         7.4.2.1.3 Association_Init .............................................................................. 26
         7.4.2.1.4 Behavior_Init ................................................................................ 26
         7.4.2.1.5 Classifier_Init ............................................................................... 26
         7.4.2.1.6 Comment_Init .............................................................................. 26
         7.4.2.1.7 Conjugation_Init ........................................................................... 27
         7.4.2.1.8 Connector_Init .............................................................................. 27
         7.4.2.1.9 Documentation_Init ................................................................. 28
         7.4.2.1.10 Element_Init .............................................................................. 28
         7.4.2.1.11 EndFeatureMembership_Init ................................................. 29
         7.4.2.1.12 Expression_Init ............................................................... 29
         7.4.2.1.13 Feature_Init .............................................................................. 29
         7.4.2.1.14 FeatureChainExpression_Init ................................................. 30
         7.4.2.1.15 FeatureChaining_Init ................................................................. 30
         7.4.2.1.16 FeatureMembership_Init .................................................... 31
         7.4.2.1.17 FeatureReferenceExpression_Init ........................................ 31
         7.4.2.1.18 FeatureTyping_Init .................................................................... 31
         7.4.2.1.19 FeatureValue_Init .................................................................... 32
         7.4.2.1.20 Function_Init ............................................................................ 32
         7.4.2.1.21 Import_Init ............................................................................... 33
         7.4.2.1.22 Interaction_Init ......................................................................... 33
         7.4.2.1.23 InvocationExpression_Init ..................................................... 34
         7.4.2.1.24 ItemFlow_Init .......................................................................... 34
         7.4.2.1.25 Membership_Init ..................................................................... 34
7.5 Factories

7.5.1 Overview ................................................................. 49

0 Preface

OMG

Founded in 1989, the Object Management Group, Inc. (OMG) is an open membership, not-for-profit computer industry standards consortium that produces and maintains computer industry specifications for interoperable, portable, and reusable enterprise applications in distributed, heterogeneous environments. Membership includes Information Technology vendors, end users, government agencies, and academia.

OMG member companies write, adopt, and maintain its specifications following a mature, open process. OMG’s specifications implement the Model Driven Architecture® (MDA®), maximizing ROI through a full-lifecycle approach to enterprise integration that covers multiple operating systems, programming languages, middleware and networking infrastructures, and software development environments. OMG’s specifications include: UML® (Unified Modeling Language™); CORBA® (Common Object Request Broker Architecture); CWM™ (Common Warehouse Metamodel); and industry-specific standards for dozens of vertical markets.

More information on the OMG is available at https://www.omg.org/.

OMG Specifications

As noted, OMG specifications address middleware, modeling, and vertical domain frameworks. All OMG Specifications are available from the OMG website at: https://www.omg.org/spec

All of OMG’s formal specifications may be downloaded without charge from our website. (Products implementing OMG specifications are available from individual suppliers.) Copies of specifications, available in PostScript and PDF format, may be obtained from the Specifications Catalog cited above or by contacting the Object Management Group, Inc. at:

OMG Headquarters
9C Medway Road, PMB 274
Milford, MA 01757
USA
Tel: +1-781-444-0404
Fax: +1-781-444-0320

Email: pubs@omg.org

Certain OMG specifications are also available as ISO standards. Please consult https://www.iso.org

Issues

All OMG specifications are subject to continuous review and improvement. As part of this process we encourage readers to report any ambiguities, inconsistencies, or inaccuracies they may find by completing the Issue Reporting Form listed on the main web page https://www.omg.org, under Specifications, Report an Issue.
1 Scope

This specification describes a transformation for a semantic translation from SysML v1 [SysMLv1] to SysML v2 [SysMLv2] in a precise way. (In this document, "SysML v1" refers to SysML v1.7, the last version of SysML prior to v2.0, and "SysML v2" refers to SysML v2.0, or whatever version corresponds to the current version of this specification.)

The main intent is to provide the rules on which automated conversions of SysML v1 models to the SysML v2 standard can be developed. In addition, this annex can be considered an educational document that provides useful information for people who would like to compare using SysML v2 and using SysML v1.

More sophisticated applications of this transformation can also be envisaged. For instance, a SysML v1 conformant tool could use this transformation to implement a limited subset of the SysML v2 API that will provide "SysMLv2-like" read-only access to its SysMLv1 models for external applications.
2 Conformance

A tool shall demonstrate conformance with this specification by meeting all of the following requirements.

1. The tool shall implement the UML4SysML abstract syntax and SysML v1 profile conformant with [SysMLv1]. The tool should, but is not required, to provide the ability to import a SysML v1 model using standard XMI Model Interchange format [XMI].

2. The tool shall implement the SysML v2 abstract syntax conformant with [SysML v2]. The tool should, but is not required, to provide the ability to export a SysML v2 model KerML-standard model interchange project (see [KerML], Clause 10; see also [SysML v2], Clause 2).

3. The tool shall implement a transformation from an abstract syntax representation of an input SysML v1 model to the abstract syntax representation of an output SysML v2, as specified in Clause 7 of this specification.

A tool may claim partial conformance with this specification by satisfying the first two requirements above, but only implementing an identified subset of the mappings specified in 7.7 and 7.8. (Note that care must also be taken that certain mappings depend on other mappings, and so cannot reasonably be implemented separately.)

Note. A tool that conforms to [SysMLv2] is not required to necessarily implement a transformation conformant with this specification, or it may implement a SysML v1 to v2 transformation that is not claimed to conform with the transformation defined in this specification.
3 Normative References

The following normative documents contain provisions which, through reference in this text, constitute provisions of this specification.

4 Terms and Definitions

Various terms and definitions are specified throughout the body of this specification.
5 Symbols

No special symbols are defined in this specification.
6 Introduction

6.1 Mapping Approach

The SysML v1 to v2 transformation is specified by directional mappings between UML metaclasses or stereotypes that are part of the SysML v1 specification [SysMLv1] (referenced below as the "SysML v1 scope") on the one hand, and the set of the metaclasses defined in the KerML [KerML] and SysMLv2 [SysMLv2] specifications (referenced below as "SysML v2") in the other hand. Some library classes are also involved.

Each mapping is a directed relationship that reifies a semantic link between a concept belonging to the SysML v1 scope on the source side and one concept belonging to SysML v2 (or one conforming library element) on the target side. As a set, those mappings constitute a declarative specification of a formal transformation that describes how the information encoded by the SysML v1 concepts can be reliably represented using constructs of SysML v2 metaclass instances.

In this approach, a mapping is represented by a UML class that has a pair of associations. One provides the from end that designates the source SysML v1 concept, while the other provides the to end that designates the target SysML v2 metaclass.

In addition to those associations, a mapping class provides a set of operations defining how the values of non-derived properties of the target metaclass instance have to be computed based on property values reachable from the source object. The computation algorithm is provided by the body condition of those operations and expressed using OCL code.

Note that the values assigned to the properties of the target object shall be instances of SysML v2 metaclasses, coming themselves from transformations of SysMLv1 objects to SysMLv2 objects. Since the specification is declarative, the order in which the individual transformations shall happen is not imposed. It is up to a conforming implementation to deal with this. Instead, the getMapped static operation is provided for referring to the result of a transformation from within an OCL rule. It returns a (possibly undefined) value, that is typed by the target metaclass of the mapping class from which it is invoked.

Each mapping class enables the transformation of any object that has the type specified by the from role to an object of the type specified by the to role, as long as it is not overloaded by a more specific mapping definition. In other words, assume a mapping is specified for the class A (i.e., it has A typing its from property), then it applies to any instance of a class B if B is a subclass of A and if there is no specialization of that mapping class specified for B (i.e., that has B typing its from property).

It is possible to restrict the applicability of a mapping specification to a specific subset of objects. This is achieved by the filter static operation that is evaluated against each candidate object. Only objects of the appropriate type for which this filter operation returns true shall be translated according to the specifications of that mapping class. The default filter operation always returns true.

Some mapping classes have one or more qualifiers for their to attribute. In such a case, each of those qualifiers reflects the specific property of the source type (i.e. the type of the from attribute) that has the same name and the same type. For those specific mappings, it is expected to get one instance of the target class (as specified by the type of the to attribute”) for each actual combination of value of those properties for a given instance of object of the source type, assuming they pass the applicability filter as described above.

6.2 Acknowledgements

The primary authors of this specification document (and also developers of a proof-of-concept implementation of it) are:
Yves Bernard, Airbus
Tim Weilkiens, oose

The specification was formally submitted for standardization by the following organizations:

- 88solutions Corporation
- Dassault Systèmes
- GiSE e.V.
- IBM
- INCOSE
- Intercax LLC
- Lockheed Martin Corporation
- MITRE
- Model Driven Solutions, Inc.
- PTC
- Simula Research Laboratory AS
- Thematix Partners LLC

However, work on the specification was also supported by over 200 people in over 80 organizations that participated in the SysML v2 Submission Team (SST), by contributing use cases, providing critical review and comment, and validating the language design. The following individuals had leadership roles in the SST:

- Manas Bajaj, Intercax LLC (API and services development lead)
- Yves Bernard, Airbus (v1 to v2 transformation co-lead)
- Bjorn Cole, Lockheed Martin Corporation (metamodel development co-lead)
- Sanford Friedenthal, SAF Consulting (SST co-lead, requirements V&V lead)
- Charles Galey, Lockheed Martin Corporation (metamodel development co-lead)
- Karen Ryan, Siemens (metamodel development co-lead)
- Ed Seidewitz, Model Driven Solutions (SST co-lead, pilot implementation lead)
- Tim Weilkiens, oose (v1 to v2 transformation co-lead)

The specification was prepared using CATIA No Magic modeling tools and the OpenMBEE system for model publication (http://www.openmbee.org), with the invaluable support of the following individuals:

- Tyler Anderson, No Magic/Dassault Systèmes
- Christopher Delp, Jet Propulsion Laboratory
- Ivan Gomes, Twingeer
- Doris Lam, Jet Propulsion Laboratory
- Robert Karban, Jet Propulsion Laboratory
- Christopher Klotz, No Magic/Dassault Systèmes
- John Watson, Lightstreet Consulting
7 Mappings

7.1 Overview

This Clause is organized in order to match the packages that subdivide the model of the transformation. The Foundations package gathers the abstract classes that represent the concepts on top of which the mapping approach is built. The next subclause presents a utility class named Helper that provides reusable operations that simplify the OCL statements defining the computation rules of target properties and make them more readable. Libraries play an important role in SysML v2, and a specific one has been created in order to represent semantics equivalent to those of UML/SysML concepts, where needed. It is presented in this subclause as well.

The three next subclauses are dedicated to initializers, factories and generic mappings, respectively. They do not specify mappings, strictly speaking. Instead, they factorize more or less advanced OCL code that will be reused by the actual mapping specifications that are contained in the two last subclauses. The first of them is dedicated to UML metaclass from the UML4SYSML scope, while the second deals with SysML stereotypes more specifically.

7.2 Foundations

7.2.1 Overview

The concepts defined by KerML/SysML v2 are relatively similar to those of UML/SysML v1, but the ways they are built are different. This makes the specification of the global transformation quite complex. In order to keep it manageable, specific kinds of foundational classes are provided. They represent concepts on which classical "model to model" transformation technologies rely:

- The mappings built on top of the abstract class Mapping shall be executed only when they are explicitly called. Each call shall produce a new target element, whatever the source element. It specifies a from property typed by the UML::CommonStructure::Element metaclass that shall be redefined by any of its subclass for specifying the convenient type of source element. Also it specifies a default (neutral) filter and a set of getMapped operations for various purposes: regular mapping result, qualified mapping result and mapping result for a collection of elements.
- The mappings built on top of the abstract class UniqueMapping, specified as a specialization of the Mapping class, shall produce only one target element for a given source element, whatever the number of time they are called.
- The mappings built on top of the abstract class MainMapping, specified as a specialization of the UniqueMapping class, shall be systematically executed (i.e. implicitly called) for all the elements that match both theirs source type and filter. There can be at most one main mapping for a given source type and only one target element shall be produced for a given source element.

The corresponding classes are located the the Foundations package.

Sometimes, it is necessary to be able to generate elements in the target model without having to provide an explicit link with a source element. In such a case, a mapping class is not appropriate. Instead the mapping framework provides the concept of a Factory.

Last, the concept of an Initializer allows the factorization of the specification of properties' default values that can be inherited by mappings and factories, as convenient.

In the model of the transformation that is specified here, all of the abstract classes of this Foundations package are subject to direct or indirect subclassing. In other words, this specification is built as a set of interrelated initializers, factories, regular, unique and main mappings, where the initializers' operation factorizes the specification of default
values for their target element, wherever possible. Those "default operations" are either used as-is or redefined by mappings or factories that can inherit for a specific initializer, as appropriate.

7.2.2 Foundational class specifications

7.2.2.1 Factory

Description

Similarly to the well-known to the homonyms software design pattern, a Factory can be used for specifying the production of a target element without any link with a source element. Factories have in common with mapping classes the operations that specify how the properties of the target element shall be computed and the "to" property that specifies the type of the target element. However factories do not define source element. Instead, they can have parameters. Those parameters, if any, shall be specified by properties with appropriate types and multiplicities. Factories are expected to provide a "create" operation with parameters matching in type and multiplicity the properties that are intended to specify them.

Generalizations

• Initializer (from Foundations)

7.2.2.2 Initializer

Description

The abstract class Initializer is the common ancestor of Mapping and Factory. It specifies a "to" property typed by the KerML::Root::Element metaclass that shall be redefined by any of its subclass for specifying the convenient type of target element. Initializers are intended to specify reusable properties' computation rules, mainly for initializing them with default values. Those rules will be inherited or redefined by the sub-classes, as appropriate.

Attributes

• /inputs [0..*]

Association Ends

• to : Element [1]

7.2.2.3 MainMapping

Description

The mappings built on top of the abstract class MainMapping are a specific kind of UniqueMappings class that are always implicitly called for any element in the source model that match both their source type (as specified by their "from" property) and their filter condition. If more than one main mapping is specified for a given source type, they shall have filters that specify mutually exclusive conditions. Also, as with any unique mapping, only one target element shall be produced for a given source element.

Generalizations

• UniqueMapping (from Foundations)

7.2.2.4 Mapping

Description
This is the generic abstract class that provides the basic features of any mapping class mapping. The mappings built on top of the abstract class Mapping are intended to be executed only when explicitly called (e.g. by the rule of another mapping class). It specifies a "from" property typed by the UML::CommonStructure::Element metaclass that shall be redefined by any of its subclass for specifying the convenient type of source element. Also it specifies a default (neutral) filter and a set of getMapped operations for various purposes: regular mapping result, qualified mapping result and mapping result for a collection of elements. Each call to the getMapped operation shall produce a new target element, whatever the source element provided. Instances of Mapping class are represent a link between one source element and the target element produced by the transformation specified by that mapping class.

Generalizations
-Initializer (from Foundations)

Association Ends
- from : Element [1]

Operations
- filter (in src : Element) : Boolean [1]
  returns "true" if the element provided as the actual parameter value can have a mapping to an instance of the type specified by the "to" attribute (i.e. can be used as a value for the "from" attribute)

  true

- getMapped (in fromVar : Element) : Element [1]
  postConditions:
  self.filter(fromVar) and
  self.to.allFeatures() -> selectByKind(UML::Property) -> reject(isDerived)
  -> forAll(p | let ops: Operation = self.allFeatures()
    -> selectByKind(UML::Operation) -> any(o | o.name = p.name) in
    p = ops() and
  result = self.to

- getMapped (in fromVar : Element, in qual : Element) : Element [1]
  postConditions:
  self.filter(fromVar) and
  self.to.allFeatures() -> selectByKind(UML::Property) -> reject(isDerived)
  -> forAll(p | let ops: Operation = self.allFeatures()
    -> selectByKind(UML::Operation) -> any(o | o.name = p.name) in
    if ops.ownedParameter
      -> select(p | p.direction = UML::ParameterDirectionKind::'in')
      -> size()=1 then
      p = ops(qual)
    else if ops.ownedParameter
      -> select(p | p.direction = UML::ParameterDirectionKind::'in')
      -> size()=0 then
      p = ops()
    else
      invalid
endif endif) and
result = self.to

• getMappedColl (in fromColl : Element) : Element [0..*]

  postConditions:
  result = fromColl->collect(e | self.getMapped(e))

7.2.2.5 UniqueMapping

Description

The mappings built on top of the abstract class UniqueMapping are a specific kind of Mappings that are intended to
produce only one target element for a given source element, whatever the number of time they are called. If a
getMapped is called several time with the same source element, the target element returned shall always be the
same.

Generalizations

• Mapping (from Foundations)

7.3 Mapping Helper and Library

7.3.1 Helper

Description

The Helper class contains operations that are used by multiple mapping classes. The specification is in the
bodyCondition.

Operations

• actionOwnedRelationship (in src : Element) : Relationship [0..*]
  Reusable mapping rule for owned relationships of a UML4SysML::Action mapping.

  let actionInputPin: Set(UML::Element) =
  src.ownedElement->select(e | e.oclIsTypeOf(UML::ActionInputPin)) in
  let triggers: Set(UML::Element) =
  src.ownedElement->select(e | e.oclIsKindOf(UML::Trigger)) in
  let toElementFMS: Set(UML::Element) =
  src.ownedElement->select(e | e.oclIsKindOf(UML::Pin)) in
  let toElementOMS: Set(UML::Element) =
  ((src.ownedElement - toElementFMS) - actionInputPin) - triggers) in
  toElementOMS->collect(e | ElementOwningMembership_Mapping.getMapped(e))
  ->union(toElementFMS->collect(e | ElementFeatureMembership_Mapping.getMapped(e)))

• activityOwnedRelationship (in src : Element) : Relationship [0..*]
  Reusable mapping rule for owned relationships of a UML4SysML::Activity mapping.
let initialNodes : Set(UML::Element) = 
  src.ownedElement->select(e | e.oclIsKindOf(UML::InitialNode)) in
let finalNodes : Set(UML::Element) = 
  src.ownedElement->select(e | e.oclIsKindOf(UML::FinalNode)) in
let elementsFMS : Set(UML::Element) = 
  ((src.ownedElement->select(e | e.oclIsKindOf(UML::ControlNode) or 
    e.oclIsKindOf(UML::Action) or e.oclIsKindOf(UML::ControlFlow) or 
    e.oclIsKindOf(UML::ObjectFlow) or e.oclIsKindOf(UML::Property)) 
  - initialNodes) - finalNodes) in
let parameters: Set(UML::Parameter) = 
  src.ownedElement->select(e | e.oclIsKindOf(UML::Parameter)) in
let ignoreParameterNodes: Set(UML::ActivityParameterNode) = 
  src.ownedElement->select(e | e.oclIsKindOf(UML::ActivityParameterNode)) in
let ignoreActivityPartition: Set(UML::ActivityPartition) = 
  src.ownedElement->select(e | e.oclIsKindOf(UML::ActivityPartition)) in
let ignoreInterruptibleActivityRegion: Set(UML::InterruptibleActivityRegion) = 
  src.ownedElement 
  ->select(e | e.oclIsKindOf(UML::InterruptibleActivityRegion)) in
let ownedClassifier: Sequence(UML::Classifier) = 
  src.ownedElement->select(e | e.oclIsKindOf(UML::Classifier)) in
let variables: Sequence(UML::Variable) = 
  src.ownedElement->select(e | e.oclIsKindOf(UML::Variable)) in
let parameterSets: Set(UML::ParameterSet) = 
  src.ownedElement->select(e | e.oclIsKindOf(UML::ParameterSet)) in
let elementsOMS: Set(UML::Element) = 
  (((((((((src.ownedElement-initialNodes)-finalNodes)-elementsFMS)-parameters) 
    - ignoreParameterNodes)-ignoreActivityPartition)- 
    ignoreInterruptibleActivityRegion)-ownedClassifier)-variables)- 
  parameterSets) Set{from.classifierBehavior}) in
let memberships : Sequence(UML::Element) = 
  elementsOMS->collect(e | ElementOwningMembership_Mapping.getMapped(e)) 
  ->union(initialNodes->collect(e | InitialNodeMembership_Mapping.getMapped(e))) 
  ->union(finalNodes->collect(e | FlowFinalNodeMembership_Mapping.getMapped(e))) 
  ->union(elementsFMS->collect(e | ElementFeatureMembership_Mapping.getMapped(e))) 
  ->union(variables->collect(e | VariableMembership_Mapping.getMapped(e))) 
  ->union(parameterSets->collect(e | ParameterSetMembership_Mapping.getMapped(e))) 
  ->union(ownedClassifier 
    ->collect(e | ElementOwningMembership_Mapping.getMapped(e))) in
if src.classifierBehavior.oclIsUndefined() then
  memberships
else
  memberships 
  ->append(ClassifierBehaviorFeatureMembership_Mapping.getMapped(src))
endif

• createUUID () : String [1]
  Creates a UUID. The specification is implementation-specific and therefore cannot provided here.

• getAppliedStereotypes (in element : Element) : Stereotype [0..*]
  Returns the list of applied stereotypes. The specification is implementation-specific and therefore cannot provided here.

• getEnumerationType (in t : Enumeration) : EnumerationDefinition [1]
  Maps a given UML4SysM::Enumeration to the appropriate SysML v2 EnumerationDefinition.

let enum: SYSML2::EnumerationDefinition = 
  Enumeration_Mapping.getMapped(t) in
if enum.oclIsKindOf(SYSML2::EnumerationDefinition) then
    enum
else if t.name = 'VerdictKind' then
    SYSML2::EnumerationDefinition.allInstances()
    ->any(e | e.qualifiedName = 'VerificationCases::VerdictKind')
else if t = UML::ParameterDirectionKind then
    KerML::FeatureDirectionKind
else if t.qualifiedName =
    'SysML::Libraries::ControlValues::ControlValueKind' then
    SYSML2::EnumerationDefinition.allInstances()
    ->any(e | e.qualifiedName =
        'SysMLv1Library::Enumerations::ControlValueKind')

    SYSML2::EnumerationDefinition.allInstances()
    ->any(e | e.qualifiedName =
        'SysMLv1Library::Enumerations::' + t.name)
endif
endif
endif
endif

• getFlowDirectionKind (in v : EnumerationLiteral) : FeatureDirectionKind [1]
Maps a given SysMLv1 feature direction enumeration literal to a SysML v2 FeatureDirectionKind enumeration literal.

if v.enumeration.qualifiedName =
    'SysML::Ports&Flows::FlowDirectionKind' then
if v = SysML::FlowDirectionKind::_'out' then
    KerML::FeatureDirectionKind::_'out'
else if (v = SysML::FlowDirectionKind::_'in') then
    KerML::FeatureDirectionKind::_'in'
else if (v = SysML::FlowDirectionKind::inout) then
    KerML::FeatureDirectionKind::inout
else
    invalid
endif endif endif
else
    invalid
endif

• getID (in src : Element) : String [1]
Returns the identifier of a UML4SysML::Element. The specification is implementation-specific and therefore cannot provided here.

• getKerMLFeatureDirectionKind (in v : EnumerationLiteral) : FeatureDirectionKind [1]
Maps a given SysMLv1 feature direction enumeration literal to a SysML v2 FeatureDirectionKind enumeration literal.
else if (v = SysML::FeatureDirectionKind::required) then
    KerML::FeatureDirectionKind::_'in'
else if (v = SysML::FeatureDirectionKind::providedRequired) then
    KerML::FeatureDirectionKind::inout
else
    invalid
endif endif endif
else
    invalid
endif
defin *getKerMLParameterDirectionKind (in v : ParameterDirectionKind) : FeatureDirectionKind [1]*
Maps a given SysMLv1 parameter direction enumeration literal to a SysML v2 FeatureDirectionKind enumeration literal.

if v = UML::ParameterDirectionKind::'_in' then
    KerML::FeatureDirectionKind::'_in'
else if (v = UML::ParameterDirectionKind::return) then
    KerML::FeatureDirectionKind::out
else if (v = UML::ParameterDirectionKind::out) then
    KerML::FeatureDirectionKind::out
else if (v = UML::ParameterDirectionKind::inout) then
    KerML::FeatureDirectionKind::inout
else
    invalid
endif endif endif

*getKerMLVisibilityKind (in v : VisibilityKind) : VisibilityKind [1]*
Maps a given UML4SysML::VisibilityKind enumeration literal to a SysML v2 VisibilityKind enumeration literal.

if (v = UML::VisibilityKind::public) then
    KerML::VisibilityKind::public
else if (v = UML::VisibilityKind::protected) then
    KerML::VisibilityKind::protected
else if (v = UML::VisibilityKind::private) then
    KerML::VisibilityKind::private
else if (v = UML::VisibilityKind::package) then
    KerML::VisibilityKind::public
else
    invalid
endif endif endif

*getMetadataByName (in mdName : String) : AttributeDefinition [1]*
Returns the metadata attribute definition element for a given metadata name.

SYSML2::AttributeDefinition.allInstances()->any(e | e.name = mdName)

*getRequirementStereotype (in element : NamedElement) : Stereotype [0..1]*
Returns the requirement stereotype for a given element.

let stereotypes: Set(UML::Stereotype) =
    Helper.getAppliedStereotypes(element) in
stereotypes->any(s | s.general->collect(g | g.qualifiedName)->includes('SysML::Requirements::AbstractRequirement'))

• getScalarValueType (in t : DataType) : DataType [1]
Maps a given SysMLv1 primitive type to a SysMLv2 scalar value type.

if t.name = 'UnlimitedNatural' then
    SYSML2::DataType.allInstances()
    ->any(e | e.qualifiedName = 'ScalarValues::Natural')
else
    SYSML2::DataType.allInstances()
    ->any(e | e.qualifiedName = 'ScalarValues::' + t.name)
endif

• getScalarValueTypeByName (in ptName : String) : DataType [1]
Maps a given SysMLv1 primitive type name string to a SysMLv2 scalar value type.

    SYSML2::DataType.allInstances()
    ->any(e | e.qualifiedName = 'ScalarValues::' + ptName)

• getTagValue (in element : Element, in stereotypeName : String, in tagValueName : String) [1]
Returns the value of a stereotype property. The specification is implementation-specific and therefore cannot provided here.

• getTagValueAsElement (in element : Element, in stereotypeName : String, in tagValueName : String) : Element [1]
Returns the value of a stereotype property as a collection. The specification is implementation-specific and therefore cannot provided here.

• getTagValueAsElementColl (in element : Element, in stereotypeName : String, in tagValueName : String) : Element [0..*]
Returns the value of a stereotype property as a string collection. The specification is implementation-specific and therefore cannot provided here.

• getTagValueAsString (in element : Element, in stereotypeName : String, in tagValueName : String) : String [1]
Returns the value of a stereotype property as a string. The specification is implementation-specific and therefore cannot provided here.

• getTagValueAsStringColl (in element : Element, in stereotypeName : String, in tagValueName : String) : String [0..*]
Returns the value of a stereotype property as a string collection. The specification is implementation-specific and therefore cannot provided here.

• globalNamespace () : Namespace [1]

    KerML::Package.allInstances()->any(p | p.owningNamespace->isEmpty())

• hasMainMapping (in element : Element) : Boolean [1]
• hasStereotypeApplied (in element : Element, in stereotypeName : String) : Boolean [1]
Returns true if the given stereotype is applied to the element. The specification is implementation-specific
and therefore cannot provided here.

- **isConnectionDef (in association : Association) : Boolean [1]**
  Checks if a UML4SysML::Association is mapped to a SysML v2 ConnectionDefinition.

  ```
  -- Case 1: composite association with
  -- multiplicity 1..1 on owner side
  let case1: Boolean = association.memberEnd
  ->exists(e | not e.isComposite and e.lower=1) and
  association.memberEnd->exists(e | e.isComposite) in

  -- Case 2: association is not composite and
  -- there is no owned end with multiplicity 0..*
  let case2: Boolean = not association.memberEnd
  ->exists(e | e.isComposite) and
  not association.ownedEnd
  ->exists(e | e.lower = 0 and e.upper = -1) in

  association.oclIsTypeOf(UML::AssociationClass) or
  case1 or
  case2
  ```

- **isInScope (in element : Element) : Boolean [1]**
  The isInScope operation is intended to define the scope on which the transformation will apply. If the
  isInScope operation return "true" for a given model element, this element shall be consider by the
  transformation. Especially, main mappings - if any - will apply to it. It shall be ignored otherwise.

- **isRequirement (in element : Element) : Boolean [1]**
  Checks whether the stereotype AbstractRequirement is applied to the given element.

  ```
  let stereotypes: Set(UML::Stereotype) =
  Helper.getAppliedStereotypes(element) in
  stereotypes->exists(s | s.general->collect(g | g.qualifiedName)
  ->includes('SysML::Requirements::AbstractRequirement'))
  ```

- **packageOwnedRelationship (in src : Element) : Relationship [0..*]**
  Reusable mapping rule for owned relationships of a UML4SysML::Package mapping.

  ```
  let useCaseAssociations : Set(UML::Association) =
  src.ownedType->select(e | e.oclIsKindOf(UML::Association))
  ->select(a | a.memberEnd->exists(e | e.type.oclIsKindOf(UML::UseCase))) in
  let unmappedAssociations : Set(UML::Association) =
  src.ownedType->select(e | e.oclIsKindOf(UML::Association))
  ->reject(a | Helper.isConnectionDef(a)) in
  let imports: Set(UML::PackageImport) =
  src.packageImport->select(pi | Helper.isInScope(pi.importedPackage)) in
  let relationships: Set(SysMLv2::Relationship) =
  src.ownedComment->collect(e | ElementOwningMembership_Mapping.getMapped(e))
  ->union(((src.ownedType-useCaseAssociations)-unmappedAssociations)
  ->collect(e | ElementOwningMembership_Mapping.getMapped(e)))
  ->union(imports->collect(i | PackageImport_Mapping.getMapped(i)))
  ->union(src.ownedElement->select(e | e.oclIsKindOf(UML::Dependency) or
  e.oclIsKindOf(UML::Package)
  or (e.oclIsKindOf(UML::InstanceSpecification) and
  ```
let initialState : Set(UML::Element) =
from.ownedElement->select(e | e.oclIsKindOf(UML::Pseudostate) and
  e.oclAsType(UML::Pseudostate).kind = UML::PseudostateKind::initial) in
let toElementOMS : Set(UML::Element) = from.ownedElement - initialState in
toElementOMS->collect(e | ElementOwningMembership_Mapping.getMapped(e))
->union(initialState->collect(e | InitialStateMembership_Mapping.getMapped(e)))

7.3.2 SysML v1 Library

The SysML v1 library is a SysML v2 model library with metadata definitions for annotating some model elements resulting from a transformation from a SysML v1 model using the SysML v1 to SysML v2 transformation.
action def RemoveVariableValueAction :> Actions::AssignmentAction {

7.4 Initializers

7.4.1 Overview

The classes presented in this subclause provide set of rules that provide default values for all non-derived features of their target metaclasses. Intentionally, initializers do not specify any "source" element. This makes them easier to specialize but prevents them from being able to provide a computation algorithm for some target features. In such a case, the operation matching the feature will be specified as abstract.

7.4.2 Mapping Specifications

7.4.2.1 KerML Initializers

7.4.2.1.1 AnnotatingElement_Init

Description

Initializes the properties of the SysML v2 element AnnotatingElement.

Generalizations

- Element_Init (from KerMLInitializers)

Association Ends

- to : AnnotatingElement [1]
  (redefines: Element_Init::to)

Operations

- annotation () : Annotation [0..*]

  Set{}

7.4.2.1.2 Annotation_Init

Description

Initializes the properties of the SysML v2 element Annotation.

Generalizations

- Relationship_Init (from KerMLInitializers)

Attributes

- to : Annotation [1]
Operations

- annotatedElement() : Element [1] {redefines target, abstract}
- annotatingElement() : AnnotatingElement [1] {redefines source, abstract}
- owningAnnotatedElement() : Element [0..1]

7.4.2.1.3 Association_Init

Description

Initializes the properties of the SysML v2 element Association.

Generalizations

- Classifier_Init (from KerMLInitializers)
- Relationship_Init (from KerMLInitializers)

Attributes

- to : Association [1]

7.4.2.1.4 Behavior_Init

Description

Initializes the properties of the SysML v2 element Behavior.

Generalizations

- Classifier_Init (from KerMLInitializers)

Attributes

- to : Behavior [1]

7.4.2.1.5 Classifier_Init

Description

Initializes the properties of the SysML v2 element Classifier.

Generalizations

- Type_Init (from KerMLInitializers)

Attributes

- to : Classifier [1]

7.4.2.1.6 Comment_Init

Description
Initializes the properties of the SysML v2 element Comment.

**Generalizations**

- AnnotatingElement_Init (from KerMLInitializers)

**Association Ends**

- to : Comment [1]
  (redefines: AnnotatingElement_Init::to)

**Operations**

- body () : String [1]{abstract}
- locale () : String [1]

null

### 7.4.2.1.7 Conjugation_Init

**Description**

Initializes the properties of the SysML v2 element Conjugation.

**Generalizations**

- Relationship_Init (from KerMLInitializers)

**Attributes**

- to : Conjugation [1]

**Operations**

- conjugatedType () : Type [1] {redefines source, abstract}
- originalType () : Type [1] {redefines target, abstract}

### 7.4.2.1.8 Connector_Init

**Description**

Initializes the properties of the SysML v2 element Connector.

**Generalizations**

- Feature_Init (from KerMLInitializers)
- Relationship_Init (from KerMLInitializers)

**Attributes**

- to : Connector [1]
**Operations**

- `isDirected () : Boolean [1]`

  `false`

**7.4.2.1.9 Documentation_Init**

**Description**

Initializes the properties of the SysML v2 element Documentation.

**Generalizations**

- `Comment_Init (from KerMLInitializers)`

**Attributes**

- `to : Documentation [1]`

**7.4.2.1.10 Element_Init**

**Description**

This is the general abstract class to be used as an ancestor for any class mapping specification.

**Generalizations**

- `Initializer (from Foundations)`

**Association Ends**

- `to : Element [1]`
  `(redefines: Initializer::to)`

**Operations**

- `aliasId () : String [0..*]`

  `Set{}`

- `declaredName () : String [0..1]`

  `null`

- `elementId () : String [1]`

  `Helper.createUUID()`

- `ownedRelationship () : Relationship [0..*]`
7.4.2.1.11 EndFeatureMembership_Init

Description

Initializes the properties of the SysML v2 element EndFeatureMembership.

Generalizations

- FeatureMembership_Init (from KerMLInitializers)

Attributes

- to : EndFeatureMembership [1]

7.4.2.1.12 Expression_Init

Description

Initializes the properties of the SysML v2 element Expression.

Generalizations

- Step_Init (from KerMLInitializers)

Attributes

- to : Expression [1]

7.4.2.1.13 Feature_Init

Description

Initializes the properties of the SysML v2 element Feature.

Generalizations

- Type_Init (from KerMLInitializers)

Attributes

- to : Feature [1]

Operations

- direction () : FeatureDirectionKind [0..1]
• isComposite () : Boolean [1]
  false
• isDerived () : Boolean [1]
  false
• isEnd () : Boolean [1]
  false
• isOrdered () : Boolean [1]
  false
• isPortion () : Boolean [1]
  false
• isReadOnly () : Boolean [1]
  false
• isUnique () : Boolean [1]
  true

7.4.2.1.14 FeatureChainExpression_Init

Description
Initializes the properties of the SysML v2 element FeatureChainExpression.

Generalizations
• OperatorExpression_Init (from KerMLInitializers)

Attributes
• to : FeatureChainExpression [1]

7.4.2.1.15 FeatureChaining_Init

Description
Initializes the properties of the SysML v2 element FeatureChaining.

Generalizations
• Relationship_Init (from KerMLInitializers)

Attributes
• to : FeatureChaining [1]

Operations
• chainingFeature () : Feature [1] {redefines target, abstract}

7.4.2.1.16 FeatureMembership_Init

Description
Initializes the properties of the SysML v2 element FeatureMembership.

Generalizations
• OwningMembership_Init (from KerMLInitializers)
• TypeFeaturing_Init (from KerMLInitializers)

Attributes
• to : FeatureMembership [1]

Operations
• ownedMemberFeature () : Feature [1] {redefines ownedMemberElement, abstract}
• ownedRelatedElement () : Element [0..*] {redefines ownedRelatedElement}

Set{self.ownedMemberFeature()}

7.4.2.1.17 FeatureReferenceExpression_Init

Description
Initializes the properties of the SysML v2 element FeatureReferenceExpression.

Generalizations
• Expression_Init (from KerMLInitializers)

Attributes
• to : FeatureReferenceExpression [1]

7.4.2.1.18 FeatureTyping_Init

Description
Initializes the properties of the SysML v2 element FeatureTyping.

Generalizations
Specialization_Init (from KerMLInitializers)

Attributes

• to : FeatureTyping [1]

Operations

• type () : Type [1] {redefines general, abstract}
• typedFeature () : Feature [1] {redefines specific, abstract}

7.4.2.1.19 FeatureValue_Init

Description

Initializes the properties of the SysML v2 element FeatureValue.

Generalizations

• OwningMembership_Init (from KerMLInitializers)

Attributes

• to : FeatureValue [1]

Operations

• featureWithValue () : Feature [1] {redefines ownedMemberElement, abstract}
• isDefault () : Boolean [1]

false
• isInitial () : Boolean [1]

false
• ownedRelatedElement () : Element [0..*] {redefines ownedRelatedElement}

Set{self.value()}
• value () : Expression [1] {redefines ownedMemberElement, abstract}

7.4.2.1.20 Function_Init

Description

Initializes the properties of the SysML v2 element Function.

Generalizations

• Behavior_Init (from KerMLInitializers)
Attributes

• to : Function [1]

7.4.2.1.21 Import_Init

Description

Initializes the properties of the SysML v2 element Import.

Generalizations

• Relationship_Init (from KerMLInitializers)

Attributes

• to : Import [1]

Operations

• importedMemberName () : String [0..1]

    null

• isImportAll () : Boolean [1]

    false

• isRecursive () : Boolean [1]

    false

• source () : Element [1] {redefines source, abstract}
• target () : Element [1] {redefines target, abstract}
• visibility () : VisibilityKind [1]

    KerML::VisibilityKind::public

7.4.2.1.22 Interaction_Init

Description

Initializes the properties of the SysML v2 element Interaction.

Generalizations

• Association_Init (from KerMLInitializers)
• Behavior_Init (from KerMLInitializers)

Attributes

• to : Interaction [1]
7.4.2.1.23 InvocationExpression_Init

Description

Initializes the properties of the SysML v2 element InvocationExpression.

Generalizations

• Expression_Init (from KerMLInitializers)

Attributes

• to : InvocationExpression [1]

7.4.2.1.24 ItemFlow_Init

Description

Initializes the properties of the SysML v2 element ItemFlow.

Generalizations

• Connector_Init (from KerMLInitializers)

Attributes

• to : ItemFlow [1]

7.4.2.1.25 Membership_Init

Description

Initializes the properties of the SysML v2 element Membership.

Generalizations

• Relationship_Init (from KerMLInitializers)

Attributes

• to : Membership [1]

Operations

• memberElement () : Element [1] {redefines target, abstract}
• memberName () : String [0..1]
  
  null
• memberShortName () : String [0..1]
  
  null
• membershipOwningNamespace () : Element [0..*] {redefines source, abstract}
• visibility () : VisibilityKind [1]

KerML::VisibilityKind::public

7.4.2.1.26 MembershipImport_Init

Description

Initializes the properties of the SysML v2 element MembershipImport.

Generalizations

• Import_Init (from KerMLInitializers)

Attributes

• to : MembershipImport [1]

Operations

• importedMembership () : Namespace [1] {redefines target, abstract}

7.4.2.1.27 Namespace_Init

Description

Initializes the properties of the SysML v2 element Namespace.

Generalizations

• Element_Init (from KerMLInitializers)

Association Ends

• to : Namespace [1]
  (redefines: Element_Init::to)

7.4.2.1.28 NamespaceImport_Init

Description

Initializes the properties of the SysML v2 element NamespaceImport.

Generalizations

• Import_Init (from KerMLInitializers)

Attributes

• to : NamespaceImport [1]

Operations

• importedNamespace () : Namespace [1] {redefines target, abstract}
7.4.2.1.29 OperatorExpression_Init

Description

Initializes the properties of the SysML v2 element OperatorExpression.

Generalizations

• Expression_Init (from KerMLInitializers)

Attributes

• to : OperatorExpression [1]

Operations

• operator () : String [1] {abstract}

7.4.2.1.30 OwningMembership_Init

Description

Initializes the properties of the SysML v2 element OwningMembership.

Generalizations

• Membership_Init (from KerMLInitializers)

Attributes

• to : OwningMembership [1]

Operations

• ownedMemberElement () : Element [1] {redefines memberElement, abstract}
• ownedRelatedElement () : Element [0..*] {redefines ownedRelatedElement}

Set{self.ownedMemberElement()}

7.4.2.1.31 Package_Init

Description

Initializes the properties of the SysML v2 element Package.

Generalizations

• Namespace_Init (from KerMLInitializers)

Attributes

• to : Package [1]
### 7.4.2.1.32 ParameterMembership_Init

**Description**

Initializes the properties of the SysML v2 element ParameterMembership.

**Generalizations**

- FeatureMembership_Init (from KerMLInitializers)

**Attributes**

- to : ParameterMembership [1]

**Operations**

- ownedMemberParameter () : Feature [1] {redefines ownedMemberFeature, abstract}
- ownedRelatedElement () : Element [0..*] {redefines ownedRelatedElement}

```
Set{self.ownedMemberParameter()}
```

### 7.4.2.1.33 Predicate_Init

**Description**

Initializes the properties of the SysML v2 element Predicate.

**Generalizations**

- Function_Init (from KerMLInitializers)

**Attributes**

- to : Predicate [1]

### 7.4.2.1.34 Redefinition_Init

**Description**

Initializes the properties of the SysML v2 element Redefinition.

**Generalizations**

- Subsetting_Init (from KerMLInitializers)

**Attributes**

- to : Redefinition [1]

**Operations**

- redefinedFeature () : Feature [1] {redefines subsettedFeature, abstract}
- redefiningFeature () : Feature [1] {redefines subsettingFeature, abstract}
7.4.2.1.35 ReferenceSubsetting_Init

Description

Initializes the properties of the SysML v2 element ReferenceSubsetting.

Generalizations

• Subsetting_Init (from KerMLInitializers)

Attributes

• to : ReferenceSubsetting [1]

Operations

• referencedFeature () : Feature [1] {redefines subsettedFeature, abstract}

7.4.2.1.36 Relationship_Init

Description

Initializes the properties of the SysML v2 element Relationship.

Generalizations

• Element_Init (from KerMLInitializers)

Association Ends

• to : Relationship [1]
  (redefines: Element_Init::to)

Operations

• ownedRelatedElement () : Element [0..*]

  Set{}

• source () : Element [0..*]

  Set{}

• target () : Element [0..*]

  Set{}

7.4.2.1.37 ReturnParameterMembership_Init

Description

Initializes the properties of the SysML v2 element ReturnParameterMembership.
Generalizations

- ParameterMembership_Init (from KerMLInitializers)

Attributes

- to : ReturnParameterMembership [1]

Operations

- isComposite (in src : Element) : Boolean [1]
  returns "true" if the element provided as the actual parameter value can have a mapping to an instance of the type specified by the "to" attribute (i.e. can be used as a value for the "from" attribute)

false

7.4.2.1.38 Specialization_Init

Description

Initializes the properties of the SysML v2 element Specialization.

Generalizations

- Relationship_Init (from KerMLInitializers)

Attributes

- to : Specialization [1]

Operations

- general () : Type [1] {redefines target, abstract}
- specific () : Type [1] {redefines source, abstract}

7.4.2.1.39 Step_Init

Description

Initializes the properties of the SysML v2 element Step.

Generalizations

- Feature_Init (from KerMLInitializers)

Attributes

- to : Step [1]

7.4.2.1.40 Subclassification_Init

Description

Initializes the properties of the SysML v2 element Subclassification.
Generalizations

• Specialization_Init (from KerMLInitializers)

Attributes

• to : Subclassification [1]

Operations

• subclasser () : Classifier [1] {abstract}
• superclassifier () : Classifier [1] {abstract}

7.4.2.1.41 Subsetting_Init

Description

Initializes the properties of the SysML v2 element Subsetting.

Generalizations

• Specialization_Init (from KerMLInitializers)

Attributes

• to : Subsetting [1]

Operations

• subsettedFeature () : Feature [1] {redefines general, abstract}
• subsettingFeature () : Feature [1] {redefines specific, abstract}

7.4.2.1.42 Succession_Init

Description

Initializes the properties of the SysML v2 element Succession.

Generalizations

• Connector_Init (from KerMLInitializers)

Attributes

• to : Succession [1]

7.4.2.1.43 SuccessionItemFlow_Init

Description

Initializes the properties of the SysML v2 element SuccessionItemFlow.

Generalizations

• ItemFlow_Init (from KerMLInitializers)
• Succession_Init (from KerMLInitializers)

Attributes

• to : SuccessionItemFlow [1]

7.4.2.1.44 TextualRepresentation_Init

Description

Initializes the properties of the SysML v2 element TextualRepresentation.

Generalizations

• AnnotatingElement_Init (from KerMLInitializers)

Attributes

• to : TextualRepresentation [1]

Operations

• body () : String [1]{abstract}
• language () : String [1]{abstract}

7.4.2.1.45 Type_Init

Description

Initializes the properties of the SysML v2 element Type.

Generalizations

• Namespace_Init (from KerMLInitializers)

Attributes

• to : Type [1]

Operations

• isAbstract () : Boolean [1]

false
• isSufficient () : Boolean [1]

false

7.4.2.1.46 TypeFeaturing_Init

Description

Initializes the properties of the SysML v2 element TypeFeaturing.
Generalizations

- Relationship_Init (from KerMLInitializers)

Attributes

- to : TypeFeaturing [1]

Operations

- featureOfType () : Feature [1] \{redefines source, abstract\}
- featuringType () : Type [1] \{redefines target, abstract\}

7.4.2.2 System Initializers

7.4.2.2.1 ActionUsage_Init

Description

Initializes the properties of the SysML v2 element ActionUsage.

Generalizations

- Step_Init (from KerMLInitializers)
- Usage_Init (from SystemInitializers)

Attributes

- to : ActionUsage [1]

Operations

- isComposite () : Boolean [1] \{redefines isComposite\}

  true

7.4.2.2.2 ActorMembership_Init

Description

Initializes the properties of the SysML v2 element ActorMembership.

Generalizations

- ParameterMembership_Init (from KerMLInitializers)

Attributes

- to : ActorMembership [1]

7.4.2.2.3 AssignmentActionUsage_Init

Description

Initializes the properties of the SysML v2 element AssignmentActionUsage.
Generalizations

- ActionUsage_Init (from SystemInitializers)

Attributes

- to : AssignmentActionUsage [1]

7.4.2.2.4 ConjugatedPortDefinition_Init

Description

Initializes the properties of the SysML v2 element ConjugatedPortDefinition.

Generalizations

- PortDefinition_Init (from SystemInitializers)

Attributes

- to : ConjugatedPortDefinition [1]

7.4.2.2.5 ConjugatedPortTyping_Init

Description

Initializes the properties of the SysML v2 element ConjugatedPortTyping.

Generalizations

- FeatureTyping_Init (from KerMLInitializers)

Attributes

- to : ConjugatedPortTyping [1]

Operations

- conjugatedPortDefinition () : ConjugatedPortDefinition [1] {redefines type, abstract}
- portDefinition () : PortDefinition [1] {abstract}

7.4.2.2.6 ConnectionUsage_Init

Description

Initializes the properties of the SysML v2 element ConnectionUsage.

Generalizations

- PartUsage_Init (from SystemInitializers)

Attributes

- to : ConnectionUsage [1]
### 7.4.2.2.7 ConstraintDefinition_Init

**Description**

Initializes the properties of the SysML v2 element ConstraintDefinition.

**Generalizations**

- Definition_Init (from SystemInitializers)

**Attributes**

- to : ConstraintDefinition [1]

### 7.4.2.2.8 ConstraintUsage_Init

**Description**

Initializes the properties of the SysML v2 element ConstraintUsage.

**Generalizations**

- Usage_Init (from SystemInitializers)

**Attributes**

- to : ConstraintUsage [1]

### 7.4.2.2.9 Definition_Init

**Description**

Initializes the properties of the SysML v2 element Definition.

**Generalizations**

- Classifier_Init (from KerMLInitializers)

**Attributes**

- to : Definition [1]

**Operations**

- isVariation () : Boolean [1]

  false

### 7.4.2.2.10 EventOccurrenceUsage_Init

**Description**

Initializes the properties of the SysML v2 element EventOccurrenceUsage.
Generalizations

• OccurrenceUsage_Init (from SystemInitializers)

Attributes

• to : EventOccurrenceUsage [1]

7.4.2.2.11 ItemDefinition_Init

Description

Initializes the properties of the SysML v2 element ItemDefinition.

Generalizations

• Definition_Init (from SystemInitializers)

Attributes

• to : ItemDefinition [1]

7.4.2.2.12 MetadataUsage_Init

Description

Initializes the properties of the SysML v2 element MetadataUsage.

Generalizations

• Usage_Init (from SystemInitializers)

Attributes

• to : MetadataUsage [1]

7.4.2.2.13 ObjectiveMembership_Init

Description

Initializes the properties of the SysML v2 element ObjectiveMembership.

Generalizations

• FeatureMembership_Init (from KerMLInitializers)

Attributes

• to : ObjectiveMembership [1]

7.4.2.2.14 OccurrenceDefinition_Init

Description

Initializes the properties of the SysML v2 element OccurrenceDefinition.
Generalizations

- Definition_Init (from SystemInitializers)

Attributes

- to : OccurrenceDefinition [1]

Operations

- isIndividual () : Boolean [1]
  
  false

7.4.2.2.15 OccurrenceUsage_Init

Description

Initializes the properties of the SysML v2 element OccurrenceUsage.

Generalizations

- Usage_Init (from SystemInitializers)

Attributes

- to : OccurrenceUsage [1]

Operations

- isIndividual () : Boolean [1]
  
  false

- portionKind () : PortionKind [1] {abstract}

7.4.2.2.16 PartUsage_Init

Description

Initializes the properties of the SysML v2 element PartUsage.

Generalizations

- Usage_Init (from SystemInitializers)

Attributes

- to : PartUsage [1]

7.4.2.2.17 PortConjugation_Init

Description
Initializes the properties of the SysML v2 element PortConjugation.

Generalizations

• Conjugation_Init (from KerMLInitializers)

Attributes

• to : PortConjugation [1]

Operations

• originalPortDefinition () : PortDefinition [1] {redefines originalType, abstract}

7.4.2.2.18 PortDefinition_Init

Description

Initializes the properties of the SysML v2 element PortDefinition.

Generalizations

• Definition_Init (from SystemInitializers)

Attributes

• to : PortDefinition [1]

7.4.2.2.19 ReferenceUsage_Init

Description

Provides the basic features to map to a ReferenceUsage element.

Generalizations

• Usage_Init (from SystemInitializers)

Attributes

• to : ReferenceUsage [1]

7.4.2.2.20 RequirementUsage_Init

Description

Initializes the properties of the SysML v2 element RequirementUsage.

Generalizations

• Usage_Init (from SystemInitializers)

Attributes

• to : RequirementUsage [1]
7.4.2.21 StateUsage_Init

Description

Initializes the properties of the SysML v2 element StateUsage.

Generalizations

• ActionUsage_Init (from SystemInitializers)

Attributes

• to : StateUsage [1]

7.4.2.22 SubjectMembership_Init

Description

Initializes the properties of the SysML v2 element SubjectMembership.

Generalizations

• ParameterMembership_Init (from KerMLInitializers)

Attributes

• to : SubjectMembership [1]

7.4.2.23 Usage_Init

Description

Initializes the properties of the SysML v2 element Usage.

Generalizations

• Feature_Init (from KerMLInitializers)

Attributes

• to : Usage [1]

Operations

• isVariation() : Boolean [1]

false

7.5 Factories
7.5.1 Overview

The classes presented in this subclause specify facilities for creating elements in the target model from an arbitrary set of zero to many input parameters. After the target element is created, no link between it and the value of inputs parameter (if any) will be preserved.

7.5.2 Mapping Specifications

7.5.2.1 EmptySubject_Factory

Description

Factory class to create a reference usage representing a subject without a source in the SysML v1 model.

Generalizations

- Factory (from Foundations)
- ReferenceUsage_Init (from SystemInitializers)

Operations

- create () : ReferenceUsage [1]
- direction () : FeatureDirectionKind [0..1] {redefines direction}

KerML::FeatureDirectionKind::::_'in'

7.5.2.2 EmptySubjectMembership_Factory

Description

Factory class to create a membership relationship for a reference usage representing a subject without a source in the SysML v1 model.

Generalizations

- Factory (from Foundations)
- SubjectMembership_Init (from SystemInitializers)

Operations

- create () : SubjectMembership [1]
- ownedMemberParameter () : Feature [1] {redefines ownedMemberParameter}

EmptySubject_Factory.create()

7.5.2.3 LiteralBoolean_Factory

Description

Factory class to create a LiteralBoolean element.

Generalizations
• Expression_Init (from KerMLInitializers)
• Factory (from Foundations)

**Association Ends**

• boolean : Boolean [1]
• to : LiteralBoolean [1]
  (redefines: Expression_Init::to)

**Operations**

• create (in boolean : Boolean) : LiteralBoolean [1]
• ownedRelationship () : Relationship [0..*] {redefines ownedRelationship}

7.5.2.4 **LiteralNull_Factory**

**Description**

Factory class to create a LiteralNull element.

**Generalizations**

• Expression_Init (from KerMLInitializers)
• Factory (from Foundations)

**Association Ends**

• to : NullExpression [1]
  (redefines: Expression_Init::to)

**Operations**

• create () : NullExpression [1]

7.5.2.5 **LiteralRational_Factory**

**Description**

Factory class to create a LiteralRational element.

**Generalizations**

• Expression_Init (from KerMLInitializers)
• Factory (from Foundations)

**Association Ends**

• real : Real [1]
• to : LiteralRational [1]
  (redefines: Expression_Init::to)
Operations

- create (in real : Real) : LiteralReal [1]
- ownedRelationship () : Relationship [0..*] {redefines ownedRelationship}

Set(ReturnParameterFeatureMembership_Factory.create())

7.5.2.6 LiteralString.Factory

Description

Factory class to create a LiteralString element.

Generalizations

- Expression_Init (from KerMLInitializers)
- Factory (from Foundations)

Association Ends

- string : String [1]
- to : LiteralString [1]
  (redefines: Expression_Init::to)

Operations

- create (in string : String) : LiteralString [1]
- ownedRelationship () : Relationship [0..*] {redefines ownedRelationship}

Set(ReturnParameterFeatureMembership_Factory.create())

7.5.2.7 ReturnParameterFeature.Factory

Description

Factory class to create a feature element with direction 'out' representing a return parameter.

Generalizations

- Factory (from Foundations)
- Feature_Init (from KerMLInitializers)

Operations

- create () : Feature [1]
- direction () : FeatureDirectionKind [0..1] {redefines direction}

KerML::FeatureDirectionKind::"out"

7.5.2.8 ReturnParameterFeatureMembership.Factory

Description
Factory class to create a feature membership relationship for a feature element with direction 'out' representing a return parameter.

Generalizations

- Factory (from Foundations)
- ReturnParameterMembership_Init (from KerMLInitializers)

Operations

- create () : ReturnParameterMembership [1]
- ownedMemberParameter () : Feature [1] {redefines ownedMemberParameter}

ReturnParameterFeature_Factory.create()

7.5.2.9 StringParameterFeature_Factory

Description

Factory class to create a feature element representing a string.

Generalizations

- Factory (from Foundations)
- Feature_Init (from KerMLInitializers)

Association Ends

- string : String [1]

Operations

- create (in string : String) : Feature [1]
- ownedRelationship () : Relationship [0..*] {redefines ownedRelationship}

Set(StringParameterFeatureValue_Factory.create(string))

7.5.2.10 StringParameterFeatureValue_Factory

Description

Factory class to create a string feature value relationship for a feature element.

Generalizations

- Factory (from Foundations)
- FeatureValue_Init (from KerMLInitializers)

Association Ends

- string : String [1]
Operations

• create (in string : String) : FeatureValue [1]
• value () : Expression [1] {redefines value}

LiteralString_Factory.create(string)

7.5.2.11 StringParameterMembership_Factory

Description

Factory class to create a parameter membership relationship for a feature element representing a string.

Generalizations

• Factory (from Foundations)
• ParameterMembership_Init (from KerMLInitializers)

Association Ends

• string : String [1]

Operations

• create (in string : String) : ParameterMembership [1]
• ownedMemberParameter () : Feature [1] {redefines ownedMemberParameter}

StringParameterFeature_Factory.create(string)

7.5.2.12 SubjectMembership_Factory

Description

Factory class to create a subject membership relationship for a given subject.

Generalizations

• Factory (from Foundations)
• SubjectMembership_Init (from SystemInitializers)

Association Ends

• subject : Type [1]

Operations

• create (in subject : Type) : SubjectMembership [1]
• ownedMemberParameter () : Feature [1] {redefines ownedMemberParameter}

subject

7.6 Generic Mappings
7.6.1 Overview

Generic mappings are partial definitions of transformation rules that are intended to factorize reusable algorithms for making the global specification more compact and easier to read and maintain. Basically, they provide a default value for all the non-derived attributes of their target metaclass wherever possible, or declare an abstract operation for them otherwise. They are similar to initializers, except that they have a source element defined. The operations provided by the generic mappings can be redefined by their specialization, as appropriate according to the source type specified by the redefinition of their `from` attribute.

All of these generic mappings are abstract.

7.6.2 Common Mappings

7.6.2.1 CommonAssignmentActionUsage_Mapping

Description

Common mapping class to create an assignment action usage.

General Mappings

GenericToAssignmentActionUsage_Mapping

Mapping Source

Action

Mapping Target

AssignmentActionUsage

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- AssignmentActionUsage::ownedRelationship () : Relationship [0..*]
  
  Set(CommonAssignmentActionUsageReplacementParameterMembership_Mapping.getMapped(from),
  CommonAssignmentActionUsageTargetParameterMembership_Mapping.getMapped(from))

7.6.2.2 CommonAssignmentActionUsageOwningMembership_Mapping

Description

Creates a owning membership relationship for `ownedMemberElement()`.

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

• ReferenceUsage::declaredName () : String [0..1]
  from.name

• ReferenceUsage::direction () : FeatureDirectionKind [0..1]
  KerML::FeatureDirectionKind::"in"

7.6.3 Generic Mappings To KerML

7.6.3.1 GenericToAnnotatingElement_Mapping

Description

Generic mapping class for mapping to the SysML v2 element AnnotatingElement.

General Mappings

GenericToElement_Mapping

Mapping Source

Element

Mapping Target

AnnotatingElement

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

• AnnotatingElement::annotation () : Annotation [0..*]
  Set{ }

7.6.3.2 GenericToAnnotation_Mapping

Description
Generic mapping class for mapping to the SysML v2 element *Annotation*.

**General Mappings**

GenericToRelationship_Mapping

**Mapping Source**

Element

**Mapping Target**

Annotation

**Owned Mappings**

(none)

**Applicable filters**

(none)

**Mapping rules**

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- Annotation::owningAnnotatedElement () : Element [0..1]  
  null

- Annotation::annotatingElement () : AnnotatingElement [1]  
  abstract rule

- Annotation::annotatedElement () : Element [1]  
  abstract rule

**7.6.3.3 GenericToAssociation_Mapping**

**Description**

Generic mapping class for mapping to the SysML v2 element *Association*.

**General Mappings**

GenericToRelationship_Mapping

GenericToClassifier_Mapping
7.6.3.4 **GenericToBehavior_Mapping**

**Description**
Generic mapping class for mapping to the SysML v2 element *Behavior*.

**General Mappings**
GenericToClassifier_Mapping

**Mapping Source**
Element

**Mapping Target**
Behavior

**Owned Mappings**
(none)

7.6.3.5 **GenericToClassifier_Mapping**

**Description**
Generic mapping class for mapping to the SysML v2 element *Classifier*.

**General Mappings**
GenericToType_Mapping

**Mapping Source**
Element

**Mapping Target**
Classifier

**Owned Mappings**
(none)

7.6.3.6 **GenericToComment_Mapping**

**Description**
Generic mapping class for mapping to the SysML v2 element *Comment*.

**General Mappings**
GenericToAnnotatingElement_Mapping
Mapping Source
Element

Mapping Target
Comment

Owned Mappings
(none)

Applicable filters
(none)

Mapping rules
In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- Comment::locale () : String [1]
  null
- Comment::body () : String [1]
  abstract rule

7.6.3.7 GenericToConjugation_Mapping

Description
Generic mapping class for mapping to the SysML v2 element Conjugation.

General Mappings
GenericToRelationship_Mapping

Mapping Source
Element

Mapping Target
Conjugation

Owned Mappings
(none)

Applicable filters
(none)

Mapping rules
In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- Conjugation::originalType () : Type [1]  
  abstract rule
- Conjugation::conjugatedType () : Type [1]  
  abstract rule

7.6.3.8 GenericToConnector_Mapping

Description

Generic mapping class for mapping to the SysML v2 element Connector.

General Mappings

GenericToFeature_Mapping
GenericToRelationship_Mapping

Mapping Source

Element

Mapping Target

Connector

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- Connector::isDirected () : Boolean [1]  
  false

7.6.3.9 GenericToDocumentation_Mapping

Description

Generic mapping class for mapping to the SysML v2 element Documentation.

General Mappings

GenericToComment_Mapping

Mapping Source
Element

Mapping Target

Documentation

Owned Mappings

(none)

7.6.3.10 GenericToElement_Mapping

Description

This is the general abstract class to be used as an ancestor for any class mapping specification.

General Mappings

Mapping

Mapping Source

Element

Mapping Target

Element

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- Element::elementId () : String [1]
  
  Helper.createUUID()

- Element::ownedRelationship () : Relationship [0..*]
  
  Set{}

- Element::shortName () : String [0..1]
  
  null

- Element::declaredName () : String [0..1]
  
  null
7.6.3.11 GenericToEndFeatureMembership_Mapping

**Description**

Generic mapping class for mapping to the SysML v2 element `EndFeatureMembership`.

**General Mappings**

GenericToEndFeatureMembership_Mapping

**Mapping Source**

Element

**Mapping Target**

EndFeatureMembership

**Owned Mappings**

(none)

7.6.3.12 GenericToExpression_Mapping

**Description**

Generic mapping class for mapping to the SysML v2 element `Expression`.

**General Mappings**

GenericToStep_Mapping

**Mapping Source**

Element

**Mapping Target**

Expression

**Owned Mappings**

(none)

7.6.3.13 GenericToFeature_Mapping

**Description**

Generic mapping class for mapping to the SysML v2 element `Feature`.

**General Mappings**
GenericToType_Mapping

Mapping Source
Element

Mapping Target
Feature

Owned Mappings
(none)

Applicable filters
(none)

Mapping rules
In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- Feature::isEnd () : Boolean [1]
  false
- Feature::isOrdered () : Boolean [1]
  false
- Feature::isDerived () : Boolean [1]
  false
- Feature::direction () : FeatureDirectionKind [0..1]
  null
- Feature::isComposite () : Boolean [1]
  false
- Feature::isPortion () : Boolean [1]
  false
- Feature::isUnique () : Boolean [1]
  true
- Feature::isReadOnly () : Boolean [1]
  false

7.6.3.14 GenericToFeatureChainExpression_Mapping

Description
Generic mapping class for mapping to the SysML v2 element `FeatureChainExpression`.

**General Mappings**

GenericToOperatorExpression_MAPPING

**Mapping Source**

Element

**Mapping Target**

FeatureChainExpression

**Owned Mappings**

(none)

### 7.6.3.15 GenericToFeatureChaining_Mapping

**Description**

Generic mapping class for mapping to the SysML v2 element `FeatureChaining`.

**General Mappings**

GenericToRelationship_MAPPING

**Mapping Source**

Element

**Mapping Target**

FeatureChaining

**Owned Mappings**

(none)

**Applicable filters**

(none)

**Mapping rules**

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- `FeatureChaining::chainingFeature () : Feature [1]
  
  abstract rule`

### 7.6.3.16 GenericToFeatureMembership_Mapping

**Description**

Generic mapping class for mapping to the SysML v2 element FeatureMembership.

**General Mappings**

GenericToOwningMembership_Mapping
GenericToTypeFeaturing_Mapping

**Mapping Source**

Element

**Mapping Target**

FeatureMembership

**Owned Mappings**

(none)

**Applicable filters**

(none)

**Mapping rules**

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- FeatureMembership::ownedMemberFeature() : Feature [1]
  *abstract rule*
- FeatureMembership::ownedRelatedElement() : Element [0..*]
  Set{self.ownedMemberFeature()}

### 7.6.3.17 GenericToFeatureReferenceExpression_Mapping

**Description**

Generic mapping class for mapping to the SysML v2 element FeatureReferenceExpression.

**General Mappings**

GenericToExpression_Mapping

**Mapping Source**

Element

**Mapping Target**

FeatureReferenceExpression

**Owned Mappings**

(none)
7.6.3.18 GenericToFeatureTyping_Mapping

Description

Generic mapping class for mapping to the SysML v2 element FeatureTyping.

General Mappings

GenericToSpecialization_Mapping

Mapping Source

Element

Mapping Target

FeatureTyping

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- FeatureTyping::type () : Type [1]
  abstract rule
- FeatureTyping::typedFeature () : Feature [1]
  abstract rule

7.6.3.19 GenericToFeatureValue_Mapping

Description

Generic mapping class for mapping to the SysML v2 element FeatureValue.

General Mappings

GenericToOwningMembership_Mapping

Mapping Source

Element

Mapping Target

FeatureValue

Owned Mappings
Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- FeatureValue::isInitial () : Boolean [1]
  false
- FeatureValue::featureWithValue () : Feature [1]
  abstract rule
- FeatureValue::ownedRelatedElement () : Element [0..*]
  Set(self.value())
- FeatureValue::value () : Expression [1]
  abstract rule
- FeatureValue::isDefault () : Boolean [1]
  false

7.6.3.20 GenericToFunction_Mapping

Description

Generic mapping class for mapping to the SysML v2 element Function.

General Mappings

GenericToBehavior_Mapping

Mapping Source

Element

Mapping Target

Function

Owned Mappings

(none)

7.6.3.21 GenericToImport_Mapping

Description

Generic mapping class for mapping to the SysML v2 element Import.

General Mappings
GenericToRelationship_Mapping

Mapping Source
Element

Mapping Target
Import

Owned Mappings
(none)

Applicable filters
(none)

Mapping rules
In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- Import::importedMemberName () : String [0..1]
  null

- Import::visibility () : VisibilityKind [1]
  KerML::VisibilityKind::public

- Import::isRecursive () : Boolean [1]
  false

- Import::isImportAll () : Boolean [1]
  false

7.6.3.22 GenericToInvocationExpression_Mapping

Description
Generic mapping class for mappingsto the SysML v2 element InvocationExpression.

General Mappings
GenericToExpression_Mapping

Mapping Source
Element

Mapping Target
InvocationExpression
Owned Mappings

(none)

7.6.3.23 GenericToInteraction_Mapping

Description

Generic mapping class for mapping to the SysML v2 element Interaction.

General Mappings

GenericToBehavior_Mapping
GenericToAssociation_Mapping

Mapping Source

Element

Mapping Target

Interaction

Owned Mappings

(none)

7.6.3.24 GenericToItemFlow_Mapping

Description

Generic mapping class for mapping to the SysML v2 element ItemFlow.

General Mappings

GenericToConnector_Mapping

Mapping Source

Element

Mapping Target

ItemFlow

Owned Mappings

(none)

7.6.3.25 GenericToMembership_Mapping

Description

Generic mapping class for mapping to the SysML v2 element Membership.

General Mappings
GenericToRelationship_Mapping

Mapping Source
Element

Mapping Target
Membership

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- Membership::memberElement () : Element [1]
  \(\text{abstract rule}\)
- Membership::memberShortName () : String [0..1]
  \(\text{null}\)
- Membership::memberName () : String [0..1]
  \(\text{null}\)
- Membership::visibility () : VisibilityKind [1]
  \(\text{KerML::VisibilityKind::public}\)
- Membership::membershipOwningNamespace () : Element [0..*]
  \(\text{abstract rule}\)

7.6.3.26 GenericToMembershipImport_Mapping

Description

Generic mapping class for mappingsto the SysML v2 element MembershipImport.

General Mappings

GenericToImport_Mapping

Mapping Source
Element

Mapping Target
MembershipImport

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- MembershipImport::importedMembership () : Namespace [1]

  abstract rule

7.6.3.27 GenericToNamespace_Mapping

Description

Generic mapping class for mapping to the SysML v2 element Namespace.

General Mappings

GenericToElement_Mapping

Mapping Source

Element

Mapping Target

Namespace

Owned Mappings

(none)

7.6.3.28 GenericToNamespaceImport_Mapping

Description

Generic mapping class for mapping to the SysML v2 element NamespaceImport.

General Mappings

GenericToImport_Mapping

Mapping Source

Element

Mapping Target
NamespaceImport

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

• NamespaceImport::importedNamespace () : Namespace [1]

abstract rule

7.6.3.29 GenericToOperatorExpression_Mapping

Description

Generic mapping class for mapping to the SysML v2 element OperatorExpression.

General Mappings

GenericToExpression_Mapping

Mapping Source

Element

Mapping Target

OperatorExpression

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

• OperatorExpression::operator () : String [1]

abstract rule

7.6.3.30 GenericToOwningMembership_Mapping

Description
Generic mapping class for mapping to the SysML v2 element *OwningMembership*.

**General Mappings**

GenericToMembership_Mapping

**Mapping Source**

Element

**Mapping Target**

OwningMembership

**Owned Mappings**

(none)

**Applicable filters**

(none)

**Mapping rules**

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- *OwningMembership::ownedMemberElement () : Element [1]*
  
  `abstract rule`
  
- *OwningMembership::ownedRelatedElement () : Element [0..*]*

  Set{self.ownedMemberElement()}

### 7.6.3.31 GenericToPackage_Mapping

**Description**

Generic mapping class for mapping to the SysML v2 element *Package*.

**General Mappings**

GenericToNamespace_Mapping

**Mapping Source**

Element

**Mapping Target**

Package

**Owned Mappings**

(none)
7.6.3.32 GenericToParameterMembership_Mapping

Description

Generic mapping class for mapping to the SysML v2 element ParameterMembership.

General Mappings

GenericToFeatureMembership_Mapping

Mapping Source

Element

Mapping Target

ParameterMembership

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- ParameterMembership::ownedMemberParameter () : Feature [1]
  null
- ParameterMembership::ownedRelatedElement () : Element [0..*]
  Set{self.ownedMemberParameter()}

7.6.3.33 GenericToPredicate_Mapping

Description

Generic mapping class for mapping to the SysML v2 element Predicate.

General Mappings

GenericToFunction_Mapping

Mapping Source

Element

Mapping Target

Predicate
Owned Mappings

(none)

7.6.3.34 GenericToRedefinition_Mapping

Description

Generic mapping class for mapping to the SysML v2 element Redefinition.

General Mappings

GenericToSubsetting_Mapping

Mapping Source

Element

Mapping Target

Redefinition

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- Redefinition::redefiningFeature () : Feature [1]
  abstract rule
- Redefinition::redefinedFeature () : Feature [1]
  abstract rule

7.6.3.35 GenericToReferenceSubsetting_Mapping

Description

Generic mapping class for mapping to the SysML v2 element ReferenceSubsetting.

General Mappings

GenericToSubsetting_Mapping

Mapping Source

Element

Mapping Target
ReferenceSubsetting

Owned Mappings
(none)

Applicable filters
(none)

Mapping rules
In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- ReferenceSubsetting::referencedFeature () : Feature [1]
  abstract rule

7.6.3.36 GenericToRelationship_Mapping

Description
Generic mapping class for mappingsto the SysML v2 element Relationship.

General Mappings
GenericToElement_Mapping

Mapping Source
Element

Mapping Target
Relationship

Owned Mappings
(none)

Applicable filters
(none)

Mapping rules
In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- Relationship::target () : Element [0..*]
  Set{}

- Relationship::ownedRelatedElement () : Element [0..*]
  Set{}
7.6.3.37 GenericToReturnParameterMembership_Mapping

Description

Generic mapping class for mapping to the SysML v2 element `ReturnParameterMembership`.

General Mappings

GenericToParameterMembership_Mapping

Mapping Source

Element

Mapping Target

ReturnParameterMembership

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- `ReturnParameterMembership::isComposite (in src : Element) : Boolean [1]`
  
  returns "true" if the element provided as the actual parameter value can have a mapping to an instance of the type specified by the "to" attribute (i.e. can be used as a value for the "from" attribute)

false

7.6.3.38 GenericToSpecialization_Mapping

Description

Generic mapping class for mapping to the SysML v2 element `Specialization`.

General Mappings

GenericToRelationship_Mapping

Mapping Source

Element
Mapping Target

Specialization

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- Specialization::general () : Type [1]
  
- Specialization::specific () : Type [1]

7.6.3.39 GenericToStep_Mapping

Description

Generic mapping class for mapping to the SysML v2 element Step.

General Mappings

GenericToFeature_Mapping

Mapping Source

Element

Mapping Target

Step

Owned Mappings

(none)

7.6.3.40 GenericToSubclassification_Mapping

Description

Generic mapping class for mapping to the SysML v2 element Subclassification.

General Mappings

GenericToSpecialization_Mapping

Mapping Source
Element

Mapping Target
Subclassification

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- Subclassification::subclass () : Classifier [1]
  null
- Subclassification::superclass () : Classifier [1]
  null

7.6.3.41 GenericToSubsetting_Mapping

Description

Generic mapping class for mapping to the SysML v2 element Subsetting.

General Mappings

GenericToSpecialization_Mapping

Mapping Source

Element

Mapping Target

Subsetting

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules
In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- Subsetting::subsettedFeature () : Feature [1]
  
- Subsetting::ownedRelatedElement () : Element [0..*]
  
  Set{}

- Subsetting::subsettingFeature () : Feature [1]
  
  from

7.6.3.42 GenericToSuccession_Mapping

Description

Generic mapping class for mapping to the SysML v2 element Succession.

General Mappings

GenericToConnector_Mapping

Mapping Source

Element

Mapping Target

Succession

Owned Mappings

(none)

7.6.3.43 GenericToSuccessionItemFlow_Mapping

Description

Generic mapping class for mapping to the SysML v2 element SuccessionItemFlow.

General Mappings

GenericToSuccession_Mapping

GenericToItemFlow_Mapping

Mapping Source

Element

Mapping Target

SuccessionItemFlow

Owned Mappings
7.6.3.44 GenericToTextualRepresentation_Mapping

Description

Generic mapping class for mapping to the SysML v2 element *TextualRepresentation*.

General Mappings

GenericToAnnotatingElement_Mapping

Mapping Source

Element

Mapping Target

TextualRepresentation

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- `TextualRepresentation::language () : String [1]
  abstract rule`
- `TextualRepresentation::body () : String [1]
  abstract rule`

7.6.3.45 GenericToType_Mapping

Description

Generic mapping class for mapping to the SysML v2 element *Type*.

General Mappings

GenericToNamespace_Mapping

Mapping Source

Element

Mapping Target

Type
Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- Type::isAbstract () : Boolean [1]
  false
- Type::isSufficient () : Boolean [1]
  false

7.6.3.46 GenericToTypeFeaturing_Mapping

Description

Generic mapping class for mapping to the SysML v2 element TypeFeaturing.

General Mappings

GenericToRelationship_Mapping

Mapping Source

Element

Mapping Target

TypeFeaturing

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- TypeFeaturing::featuringType () : Type [1]
  abstract rule
- TypeFeaturing::featureOfType () : Feature [1]
  abstract rule
7.6.4 Generic Mappings to Systems

7.6.4.1 GenericToActionUsage_Mapping

Description

Generic mapping class for mapping to the SysML v2 element `ActionUsage`.

General Mappings

GenericToUsage_Mapping
GenericToStep_Mapping

Mapping Source

Element

Mapping Target

ActionUsage

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- `ActionUsage::isComposite () : Boolean [1]
  true`

7.6.4.2 GenericToActorMembership_Mapping

Description

Generic mapping class for mapping to the SysML v2 element `ActorMembership`.

General Mappings

GenericToParameterMembership_Mapping

Mapping Source

Element

Mapping Target

ActorMembership
7.6.4.3 GenericToAssignmentActionUsage_Mapping

Description
Generic mapping class for mapping to the SysML v2 element AssignmentActionUsage.

General Mappings
GenericToActionUsage_Mapping

Owned Mappings
(none)

7.6.4.4 GenericToConnectionUsage_Mapping

Description
Generic mapping class for mapping to the SysML v2 element ConnectionUsage.

General Mappings
GenericToPortUsage_Mapping

Owned Mappings
(none)

7.6.4.5 GenericToConjugatedPortDefinition_Mapping

Description
Generic mapping class for mapping to the SysML v2 element ConjugatedPortDefinition.

General Mappings
GenericToPortDefinition_Mapping

Mapping Source
Element

Mapping Target
ConjugatedPortDefinition

Owned Mappings

(none)

7.6.4.6 GenericToConjugatedPortTyping_Mapping

Description
Generic mapping class for mapping to the SysML v2 element ConjugatedPortTyping.

General Mappings
GenericToFeatureTyping_Mapping

Mapping Source
Element

Mapping Target
ConjugatedPortTyping

Owned Mappings

(none)

Applicable filters

(none)

Mapping rules
In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- ConjugatedPortTyping::conjugatedPortDefinition () : ConjugatedPortDefinition [1]
  abstract rule
- ConjugatedPortTyping::portDefinition () : PortDefinition [1]
  abstract rule

7.6.4.7 GenericToConstraintDefinition_Mapping

Description
Generic mapping class for mapping to the SysML v2 element ConstraintDefinition.
General Mappings

GenericToDefinition_Mapping

Mapping Source
Element

Mapping Target
ConstraintDefinition

Owned Mappings
(none)

7.6.4.8 GenericToConstraintUsage_Mapping

Description
Generic mapping class for mapping to the SysML v2 element *ConstraintUsage*.

General Mappings

GenericToUsage_Mapping

Mapping Source
Element

Mapping Target
ConstraintUsage

Owned Mappings
(none)

7.6.4.9 GenericToDefinition_Mapping

Description
Generic mapping class for mapping to the SysML v2 element *Definition*.

General Mappings

GenericToClassifier_Mapping

Mapping Source
Element

Mapping Target
Definition
Owned Mappings

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- Definition::isVariation() : Boolean [1]
  false

7.6.4.10 GenericToEventOccurrenceUsage_Mapping

Description

Generic mapping class for mapping to the SysML v2 element EventOccurrenceUsage.

General Mappings

GenericToOccurrenceUsage_Mapping

Mapping Source

Element

Mapping Target

EventOccurrenceUsage

Owned Mappings

(none)

7.6.4.11 GenericToItemDefinition_Mapping

Description

Generic mapping class for mapping to the SysML v2 element ItemDefinition.

General Mappings

GenericToDefinition_Mapping

Mapping Source

Element

Mapping Target

ItemDefinition
7.6.4.12 GenericToMetadataUsage_Mapping

**Description**

Generic mapping class for mapping to the SysML v2 element `MetadataUsage`.

**General Mappings**

GenericToUsage_Mapping

**Mapping Source**

Element

**Mapping Target**

MetadataUsage

**Owned Mappings**

(none)

7.6.4.13 GenericToObjectiveMembership_Mapping

**Description**

Generic mapping class for mapping to the SysML v2 element `ObjectiveMembership`.

**General Mappings**

GenericToFeatureMembership_Mapping

**Mapping Source**

Element

**Mapping Target**

ObjectiveMembership

**Owned Mappings**

(none)

7.6.4.14 GenericToOccurrenceDefinition_Mapping

**Description**

Generic mapping class for mapping to the SysML v2 element `OccurrenceDefinition`.

**General Mappings**
GenericToDefinition_Mapping

Mapping Source
Element

Mapping Target
OccurrenceDefinition

Owned Mappings
(none)

Applicable filters
(none)

Mapping rules
In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- OccurrenceDefinition::isIndividual () : Boolean [1]
  false

7.6.4.15 GenericToOccurrenceUsage_Mapping

Description
Generic mapping class for mapping to the SysML v2 element OccurrenceUsage.

General Mappings
GenericToUsage_Mapping

Mapping Source
Element

Mapping Target
OccurrenceUsage

Owned Mappings
(none)

Applicable filters
(none)

Mapping rules
In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- `OccurrenceUsage::portionKind () : PortionKind [1]`
  OclUndefined
- `OccurrenceUsage::isIndividual () : Boolean [1]`
  false

**7.6.4.16 GenericToPartUsage_Mapping**

**Description**
Generic mapping class for mapping to the SysML v2 element `PartUsage`.

**General Mappings**
GenericToUsage_Mapping

**Mapping Source**
Element

**Mapping Target**
PartUsage

**Owned Mappings**
(none)

**7.6.4.17 GenericToPortConjugation_Mapping**

**Description**
Generic mapping class for mapping to the SysML v2 element `PortConjugation`.

**General Mappings**
GenericToConjugation_Mapping

**Mapping Source**
Element

**Mapping Target**
PortConjugation

**Owned Mappings**
(none)

**Applicable filters**
Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- PortConjugation::originalPortDefinition () : PortDefinition [1]  
  _abstract rule_

7.6.4.18 GenericToPortDefinition_Mapping

Description

Generic mapping class for mapping to the SysML v2 element *PortDefinition*.

General Mappings

GenericToDefinition_Mapping

Mapping Source

Element

Mapping Target

PortDefinition

Owned Mappings

(none)

7.6.4.19 GenericToReferenceUsage_Mapping

Description

Provides the basic features to map to a ReferenceUsage element.

General Mappings

GenericToUsage_Mapping

Mapping Source

Element

Mapping Target

ReferenceUsage

Owned Mappings

(none)
7.6.4.20 **GenericToRequirementUsage_Mapping**

**Description**
Generic mapping class for mapping to the SysML v2 element `RequirementUsage`.

**General Mappings**
GenericToUsage_Mapping

**Mapping Source**
Element

**Mapping Target**
RequirementUsage

**Owned Mappings**
(none)

7.6.4.21 **GenericToStateUsage_Mapping**

**Description**
Generic mapping class for mapping to the SysML v2 element `StateUsage`.

**General Mappings**
GenericToActionUsage_Mapping

**Mapping Source**
Element

**Mapping Target**
StateUsage

**Owned Mappings**
(none)

7.6.4.22 **GenericToSubjectMembership_Mapping**

**Description**
Generic mapping class for mapping to the SysML v2 element `SubjectMembership`.

**General Mappings**
GenericToParameterMembership_Mapping

**Mapping Source**
Element

Mapping Target

SubjectMembership

Owned Mappings

(none)

7.6.4.23 GenericToUsage_Mapping

Description

Generic mapping class for mapping to the SysML v2 element Usage.

General Mappings

GenericToFeature_Mapping

(none)

Applicable filters

(none)

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- Usage::isVariation () : Boolean [1]
  false

7.7 Mappings from UML4SysML metaclasses

This chapter lists all mapping specifications of UML4SysML model elements.

7.7.1 Overview

UML4SysML is the subset of UML containing all model elements that are reused by SysML. The complete list of model elements is defined in [SysMLv1], subclause 4.1.
### 7.7.2 Actions

This chapter lists all mapping specifications of UML4SysML::Actions model elements.

#### 7.7.2.1 Overview

The following table gives an overview of which SysML v2 elements the UML4SysML::Actions elements are transformed with which mapping class. The mapping details are in 7.7.2.3.

The justifications for the elements without mapping are given in 7.7.2.2.

### 7.7.2.2 UML4SysML::Actions elements not mapped

<table>
<thead>
<tr>
<th>SysML v1 Concept</th>
<th>Rationale</th>
</tr>
</thead>
<tbody>
<tr>
<td>AcceptCallAction</td>
<td>Since the CallEvent is not supported by SysML v2, the AcceptCallAction is also not covered. It is mapped to an empty action usage to keep the connections within the activity respectively action definition.</td>
</tr>
<tr>
<td>ActionInputPin</td>
<td>The UML4SysML::ActionInputPin concept is not covered by SysML v2. The model element is mapped as a input or output pin, but without the special action input pin semantics.</td>
</tr>
<tr>
<td>Clause</td>
<td>Mapping is not specified yet.</td>
</tr>
<tr>
<td>ConditionalNode</td>
<td>Mapping is not specified yet.</td>
</tr>
<tr>
<td>LinkEndCreationData</td>
<td>Mapping is not specified yet.</td>
</tr>
<tr>
<td>LinkEndData</td>
<td>Mapping is not specified yet.</td>
</tr>
<tr>
<td>LinkEndDestructionData</td>
<td>Mapping is not specified yet.</td>
</tr>
<tr>
<td>ReclassifyObjectAction</td>
<td>The UML4SysML::ReclassifyObjectAction is not supported by SysML v2. It is mapped to an empty action usage to keep the connections within the activity respectively action definition.</td>
</tr>
<tr>
<td>ReplyAction</td>
<td>The UML4SysML::ReplyAction is only used with UML4SysML::AcceptCallAction. Since we have no mapping of AcceptCallAction to SysML v2, there is also no mapping for ReplyAction. However, it is mapped to an empty action usage to keep the connections within the activity respectively action definition.</td>
</tr>
<tr>
<td>StartClassifierBehaviorAction</td>
<td>The UML4SysML::StartClassifierBehaviorAction is not supported by SysML v2. It is mapped to an empty action usage to keep the connections within the activity respectively action definition.</td>
</tr>
<tr>
<td>StartObjectBehaviorAction</td>
<td>The UML4SysML::StartObjectBehaviorAction is not supported by SysML v2. It is mapped to an empty action usage to keep the connections within the activity respectively action definition.</td>
</tr>
<tr>
<td>UnmarshallAction</td>
<td>Mapping is not specified yet.</td>
</tr>
</tbody>
</table>

#### 7.7.2.3 Mapping Specifications

The mapping specifications are divided into sections corresponding to the structure in which the UML 2.5.1 specification groups the actions.

The name of the primary mapping class is "<SysML v1 action name>_Mapping". The secondary mapping classes for the further mapping structures start with an abbreviation of the SysML v1 action name to reduce the overall length of the names.
7.7.2.3.1 Accept Event Actions

7.7.2.3.1.1 AcceptCallAction_Mapping

Description

Since the CallEvent is not supported by SysML v2, the AcceptCallAction is also not covered. It is mapped to an empty action usage to keep the connections within the activity respectively action definition.

General Mappings

AcceptEventAction_Mapping

Mapping Source

AcceptCallAction

Mapping Target

AcceptActionUsage

Owned Mappings

(none)

7.7.2.3.1.2 AcceptEventAction_Mapping

Description

The UML4SysML::AcceptEventAction is mapped to a AcceptActionUsage element.

If the trigger is a signal, it is mapped to an accept parameter typed by the signal.

SysMLv2 does not support more than one trigger. Therefore only the first specified trigger of the action is transformed. All further triggers are ignored.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```plaintext
action acceptEventActionSignalEvent1 accept : SysMLv1Signal via sysMLv1Port;
action acceptEventActionChangeEvent1 accept when when changeExpression.result {
    calc changeExpression {
        return : ScalarValues::Boolean;
        language "OCL"
        /*
        * x > 0
        */
    }
}
```

(none)

7.7.2.3.2.11 UntypedPin_Mapping

Description
Base mapping class for model elements of kind UML4SysML::Pin without a type. The target element is a SysMLv2 ReferenceUsage.
The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```plaintext
action def SysMLv1Activity {
  action sysMLv1Action {
    in sysMLv1UntypedPin;
  }
}
```

**General Mappings**

GenericToReferenceUsage_Mapping

NamedElementMain_Mapping

**Mapping Source**

Pin

**Mapping Target**

ReferenceUsage

**Owned Mappings**

(none)

**Applicable filters**

This mapping applies only if the following (OCL) condition is verified:

```plaintext
src.type.oclIsUndefined()
```

**Mapping rules**

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- **ReferenceUsage::direction () : FeatureDirectionKind [0..1]**
  
  ```plaintext
  if from.oclIsTypeOf(UML::InputPin) then
    KerML::FeatureDirectionKind::_'in'
  else if from.oclIsTypeOf(UML::OutputPin) then
    KerML::FeatureDirectionKind::_'out'
  else
    OclUndefined
  endif endif
  ```

- **ReferenceUsage::ownedRelationship () : Relationship [0..*]**
  
  ```plaintext
  ElementOwnership_Mapping.getMappedColl(from.ownedComment)
  ->including(MultiplicityMembership_Mapping.getMapped(from))
  ```

**7.7.2.3.2.12 ValuePin_Mapping**

**Description**
A UML4SysML::ValuePin is mapped to a SysML v2 ReferenceUsage with assigned value.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```plaintext
action sysMLv1Action {
  in sysMLv1ValuePin1 : ScalarValues::Integer = 42;
  in sysMLv1ValuePin2 = {
    return result;
    language "English"
    /*
     * this is a opaque expression
     */
    }.result;
}
```

#### 7.7.3.3 Mapping Specifications

#### 7.7.3.3.1 ActivityAsDefinition_Mapping

**Description**

A UML4SysML::Activity is mapped to a SysMLv2 ActionDefinition if the owner of the activity is a UML4SysML::Package.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```plaintext
action def SysMLv1Activity {
   in parIn : SysMLv1Block;
   out parOut;
   out parReturn;
}
```
**General Mappings**

**CommonActivity_Mapping**

**Mapping Source**

Activity

**Mapping Target**

ActionDefinition

**Owned Mappings**

(none)

**Applicable filters**

This mapping applies only if the following (OCL) condition is verified:

\[ \text{src.owner.oclIsKindOf(UML::Package)} \]

**Mapping rules**

The mapping class only has inherited rules. See the mapping classes in the general mapping section for details.

### 7.7.3.3.2 ActivityAsUsage_Mapping

**Description**

A UML4SysML::Activity is mapped to a SysMLv2 ActionUsage if the owner of the activity is not a UML4SysML::Package. To follow the informal naming convention that usage elements start with a lowercase letter, the first letter of the activity's name is converted to a lowercase letter.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
part def SysMLv1Block {
  action sysMLv1Activity {
    in parIn : SysMLv1Enumeration;
    out parOut : ScalarValues::Integer;
  }
}
enum def SysMLv1Enumeration;
```
ActionUsage

Owned Mappings

(none)

Applicable filters

This mapping applies only if the following (OCL) condition is verified:

\[(\text{not src.owner.oclIsKindOf(UML::Package)}) \text{ and (not Helper.hasStereotypeApplied(src, 'SysML::Requirements::TestCase'))}\]

Mapping rules

In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- ActionUsage::declaredName () : String [0..1]
  
  if from.name.size() > 1 then
    from.name.substring(1,1).toLowerCase().concat(from.name.substring(2, from.name.size()))
  else
    from.name
  endif

7.7.9.3 Mapping Specifications

7.7.9.3.1 ElementImport_Mapping

Description

A UML4SysML::ElementImport is mapped to a SysMLv2 MembershipImport. The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```plaintext
class SysMLv1Package1 {  
    import SysMLv1Package2::SysMLv1Block;  
    import SysMLv1Package2::SysMLv1ValueType;  
}  
class SysMLv1Package2 {  
    part def SysMLv1Block;  
    attribute def SysMLv1ValueType;  
}
```

General Mappings
GenericToMembershipImport_Mapping
NamedElementMain_Mapping

Mapping Source
ElementImport

Mapping Target
MembershipImport

Owned Mappings
(none)

Applicable filters
This mapping applies only if the following (OCL) condition is verified:

```
if src.oclIsKindOf(UML::ElementImport) then
    Helper.hasMainMapping(src.oclAsType(UML::ElementImport).importedElement)
else
    false
endif
```

Mapping rules
In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- `MembershipImport::importedMemberName () : String [0..1]`
  
  `from.alias`

- `MembershipImport::importedMembership () : Namespace [1]`
  
  `ElementOwningMembership_Mapping.getMapped(from.importedElement)`

- `MembershipImport::visibility () : VisibilityKind [1]`
  
  `Helper.getKerMLVisibilityKind(from.visibility)`

7.7.9.3.2 Model_Mapping

Description
SysMLv2 has no explicit model element for a model. The UML4SysML::Model element is mapped to a SysMLv2 Package. The property "viewpoint" is mapped to a metadata defined in the SysML v1 library. The expected SysML v2 textual notation of a UML4SysML::Model with URI and viewpoint is as follows. If URI or viewpoint are not set in the source model, the metadata is not generated.

```omsl
package SysMLv1Model {
    @SysMLv1Library::PackageData {URI="https://omg.org";}
    @SysMLv1Library::ModelData {'viewpoint'="The viewpoint of the model element.";}
}
```

7.7.13.3.4 UseCase_Mapping

Description

A UML4SysML::UseCase is mapped to a SysML v2 UseCaseDefinition. The expected SysML v2 textual syntax of a mapped UML4SysML::UseCase with a defined subject is as follows.

use case def SysMLv1UseCase {
   subject subject_SysMLv1Block : SysMLv1Block;
}
part def SysMLv1Block;

Currently, only one use case subject is supported by the mapping class. Since the UML4SysML::Extend relationship is not considered by the SysML v1 to SysML v2 transformation, the extension points of a use case are also not mapped.

         CommonReturnParameterFeatureMembership_Mapping.getMapped(from)}
  endif

7.8 Mappings from SysML v1.7 stereotypes

This chapter lists all mapping specifications of SysML v1 stereotype model elements.

7.8.1 Overview

The following subclauses of 7.8 are organized according to the main packages of SysML v1.

7.8.2 Activities

This chapter lists all mapping specifications of SysML::Activities model elements.

7.8.2.1 Overview

The following table gives an overview of which SysML v2 elements the SysML::Activities elements are transformed with which mapping class. The mapping details are specified in 7.8.2.3.

The justifications for the elements without mapping are given in 7.8.2.2.

<table>
<thead>
<tr>
<th>SysML v1 Concept</th>
<th>SysML v2 Concept</th>
</tr>
</thead>
<tbody>
<tr>
<td>Continuous</td>
<td>MetadataUsage</td>
</tr>
<tr>
<td>ControlOperator</td>
<td></td>
</tr>
<tr>
<td>Discrete</td>
<td>MetadataUsage</td>
</tr>
<tr>
<td>NoBuffer</td>
<td></td>
</tr>
<tr>
<td>Optional</td>
<td></td>
</tr>
<tr>
<td>Overwrite</td>
<td></td>
</tr>
<tr>
<td>Probability</td>
<td>MetadataUsage</td>
</tr>
<tr>
<td>SysML v1 Concept</td>

</tbody>
</table>

### 7.8.2.2 SysML::Activities elements not mapped

Table 23. List of SysML v1 elements not mapped of this section

<table>
<thead>
<tr>
<th>SysML v1 Concept</th>
<th>Rationale</th>
</tr>
</thead>
<tbody>
<tr>
<td>ControlOperator</td>
<td>The concept that an action can control other actions is not supported by SysML v2.</td>
</tr>
<tr>
<td>NoBuffer</td>
<td>Mapping is not specified yet.</td>
</tr>
<tr>
<td>Optional</td>
<td>The stereotype states that the lower multiplicity of the parameter is 0. Since the multiplicity of the parameter is transformed, the additional statement that the parameter is optional is redundant. Therefore, the stereotype is not considered in the transformation.</td>
</tr>
<tr>
<td>Overwrite</td>
<td>Mapping is not specified yet.</td>
</tr>
</tbody>
</table>

### 7.8.2.3 Mapping Specifications

#### 7.8.2.3.1 ProbabilityMetadataUsage_Mapping

**Description**

A SysML::Activities::Probability is mapped to a SysML v2 MetadataUsage owned by the appropriate target element of the UML4SysML::ActivityEdge or UML4SysML::ParameterSet.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```plaintext
action def SysMLv1Activity {
    action sysMLv1Activity;
    succession sysMLv1ControlFlow1 first sysMLv1Action1 then sysMLv1Action2 {
        @SysMLv1Library::ProbabilityData {probability = 0.42;}
    }
    action sysMLv1Action2;
}
```

**General Mappings**

GenericToMetadataUsage_Mapping

**Mapping Source**

<td>Mapping is not specified yet.</td>
</tr>
</tbody>
</table>
### 7.8.4.3 Mapping Specifications

#### 7.8.4.3.1 AssociationBlock_Mapping

**Description**

An AssociationBlock is mapped to a SysML v2 ConnectionDefinition.

The SysML::Blocks::ParticipantProperties transformation is not defined yet. Therefore, the mapping is currently identical with the mapping of UML4SysML::AssociationClass.

**General Mappings**

**AssociationClass_Mapping**

**Mapping Source**

AssociationClass

**Mapping Target**

ConnectionDefinition

**Owned Mappings**

(none)

**Applicable filters**

This mapping applies only if the following (OCL) condition is verified:

```
Helper.hasStereotypeApplied(src, 'SysML::Blocks::Block')
```

**Mapping rules**

The mapping class only has inherited rules. See the mapping classes in the general mapping section for details.

#### 7.8.4.3.2 BindingConnector_Mapping

**Description**
A SysML::Blocks::BindingConnector is mapped to a SysML v2 BindingConnectorAsUsage.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```plaintext
part def SysMLv1Block1 {
    part sysMLv1PartProperty1 : SysMLv1Block2;
    part sysMLv1PartProperty2 : SysMLv1Block2;

    binding sysMLv1BindingConnector
        bind sysMLv1PartProperty1 = sysMLv1PartProperty2;
}
part def SysMLv1Block2;
```

**General Mappings**

**Connector_Mapping**

**Mapping Source**

Connector

**Mapping Target**

BindingConnectorAsUsage

**Owned Mappings**

(none)

**Applicable filters**

This mapping applies only if the following (OCL) condition is verified:

`Helper.hasStereotypeApplied(src, 'SysML::Blocks::BindingConnector')`

**Mapping rules**

The mapping class only has inherited rules. See the mapping classes in the general mapping section for details.

**7.8.4.3.3 Block_Mapping**

**Description**

A SysML::Blocks::Block is mapped to a SysML v2 PartDefinition.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```plaintext
part definition SysMLv1Block;
```

**General Mappings**

**Class_Mapping**
Mapping Source

Applicable filters

This mapping applies only if the following (OCL) condition is verified:

```
not src.oclIsTypeOf(UML::AssociationClass)
and Helper.hasStereotypeApplied(src, 'SysML::Blocks::Block')
and not Helper.hasStereotypeApplied(src, 'SysML::ConstraintBlocks::ConstraintBlock')
and not Helper.hasStereotypeApplied(src, 'SysML::Ports&Flows::InterfaceBlock')
```

Mapping rules

The mapping class only has inherited rules. See the mapping classes in the general mapping section for details.

**7.8.4.3.4 EncapsulatedBlock_Mapping**

Description

A SysML::Block with `isEncapsulated=true` is mapped to a SysML v2 PartDefinition, and, additionally, gets a metadata feature defined by the SysML v1 library which represents the SysML v1 `isEncapsulated` property.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
part def SysMLv1EncapsulatedBlock {
    @SysMLv1Library::BlockData {isEncapsulated = true;}
}
```

```plaintext
if src.oclIsKindOf(UML::Property) and not src.oclIsKindOf(UML::Port) then
    let p: UML::Property = src.oclAsType(UML::Property) in
    not p.type.oclIsUndefined() and Helper.hasStereotypeApplied(p.type, 'SysML::Blocks::Block') and
    (p.association.oclIsUndefined() or p.association.ownedEnd->excludes(p)) and
    p.aggregation = UML::AggregationKind::composite
else
    false
endif
```

**Mapping rules**

The mapping class only has inherited rules. See the mapping classes in the general mapping section for details.
7.8.4.3.13 Model Libraries

The Blocks section of the SysML v1 specification contains two model libraries.

7.8.4.3.13.1 PrimitiveValueTypes

The SysML v1 model library PrimitiveValueTypes contains primitive types that are mapped to the appropriate scalar values in SysML v2.

7.8.4.3.13.1.1 Boolean

The SysML v1 primitive type Boolean is mapped to the SysML v2 ScalarValues::Boolean element.

7.8.4.3.13.1.2 Complex

The SysML v1 primitive type Complex is mapped to the SysML v2 ScalarValues::Complex element.

7.8.4.3.13.1.3 Integer

The SysML v1 primitive type Integer is mapped to the SysML v2 ScalarValues::Integer element.

7.8.4.3.13.1.4 Number

The SysML v1 primitive type Number is abstract. Therefore, no mapping is defined for it.

7.8.4.3.13.1.5 Real

The SysML v1 primitive type Real is mapped to the SysML v2 ScalarValues::Real element.

7.8.4.3.13.1.6 String

The SysML v1 primitive type String is mapped to the SysML v2 ScalarValues::String element.

7.8.4.3.13.2 UnitAndQuantityKind

The SysML v1 model library UnitAndQuantityKind contains the blocks Unit and QuantityKind.

7.8.4.3.13.2.1 QuantityKind

The mapping of the SysML v1 QuantityKind element is not specified yet.

7.8.4.3.13.2.2 Unit

The mapping of the SysML v1 QuantityKind element is not specified yet.

7.8.5 ConstraintBlocks

7.8.5.1 Overview

The following table gives an overview of which SysML v2 elements the SysML::ConstraintBlocks elements are transformed with which mapping class. The mapping details are in 7.8.5.2.

<table>
<thead>
<tr>
<th>SysML v1 Concept</th>
<th>SysML v2 Concept</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConstraintBlock</td>
<td>ConstraintDefinition</td>
</tr>
</tbody>
</table>
7.8.5.2 Mapping Specifications

7.8.5.2.1 ConstraintBlock_Mapping

Description

A SysML::ConstraintBlocks::ConstraintBlock is mapped to a SysML v2 ConstraintDefinition.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```plaintext
constraint def SysMLv1ConstraintBlock {
    in attribute a : ScalarValues::Integer;
    in attribute b : ScalarValues::Integer;
    in attribute c : ScalarValues::Integer;

    constraint constraintExpression {
        language "OCL2.0"
        /*
        * c == a + b
        */
    }
}
```

7.8.6.3.33 Viewpoint_Mapping

Description

A SysML::ModelElements::Viewpoint is mapped to a SysML v2 ViewDefinition with an owned SysML v2 ViewpointUsage. In SysML v1, the viewpoint combines the purpose and stakeholder concerns as well as presentation information. This is covered by a SysML v2 ViewDefinition with owned SysML v2 ViewpointUsage.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```
view def SysMLv1Viewpoint {
    viewpoint sysMLv1Viewpoint {
        frame concern1XmiID1;
        frame concern2XmiID2;
        metadata SysMLv1Library::ViewpointData {
            languages = ("language1","language2");
            presentations = ("presentation1", "presentation2");
        }
        require constraint {
            doc /* thisIsThePurpose */
        }
    }
    satisfy sysMLv1Viewpoint;

7.8.7 PortsAndFlows

This chapter lists all mapping specifications of SysML::PortsAndFlows model elements.

7.8.7.1 Overview

The following table gives an overview of which SysML v2 elements the SysML::Ports&Flows elements are transformed with which mapping class. The mapping details are in 7.8.7.3.

The justifications for the elements without mapping are given in 7.8.7.2.

<table>
<thead>
<tr>
<th>SysML v1 Concept</th>

### 7.8.7.3 Mapping Specifications

#### 7.8.7.3.1 AcceptChangeStructuralFeatureEventAction_Mapping

**Description**

The SysML::PortsAndFlows::AcceptChangeStructuralFeatureEventAction element is mapped to SysML v2 AcceptActionUsage. The details of the mapping are not defined yet.

**General Mappings**

AcceptEventAction_Mapping

**Mapping Source**

AcceptEventAction

**Mapping Target**

AcceptActionUsage

**Owned Mappings**

(none)

**Applicable filters**

This mapping applies only if the following (OCL) condition is verified:

```otlin
Helper.hasStereotypeApplied(src, 'SysML::Ports&Flows::AcceptChangeStructuralFeatureEventAction')
```

**Mapping rules**

The mapping class only has inherited rules. See the mapping classes in the general mapping section for details.

#### 7.8.7.3.2 CommonFullPort_Mapping

**Description**

The abstract mapping class is the base class of the mapping classes for the SysML::Ports&Flows::FullPort mappings.

**General Mappings**

PropertyCommon_Mapping
Mapping Source
Port

Mapping Target
PartUsage

Owned Mappings
(none)

Applicable filters
(none)

Mapping rules
In addition to the inherited rules, the following lists the mapping class specific mapping rules for the target element properties.

- PartUsage::ownedRelationship () : Relationship [0..*]

```java
let typings: Set(KerML::FeatureTyping) = if from.type.oclIsUndefined() then
  Set()
else
  Set(StructuralFeatureToFeatureTyping_Mapping.getMapped(from))
endif in
let subsettings: Set(KerML::Subsetting) = from.subsettedProperty
  ->collect(p | PropertySubsetting_Mapping.getMapped(from, p))->asSet() in
let defaultValue: Set(KerML::OwningMembership) =
  if from.defaultValue.oclIsUndefined() then
    Set()
  else
    Set(DefaultValue_Mapping.getMapped(from))
  endif in
typings->union(subsettings)->union(defaultValue)
  ->including(MultiplicityMembership_Mapping.getMapped(from))->asSet() ->including(FullPortMetadataOwningMembership_Mapping.getMapped(from))
```

7.8.7.3.3 FeatureDirectionKind

The SysML::Ports&Flows::FeatureDirectionKind enumeration is mapped to the SysML v2 FeatureDirectionKind enumeration according to the following mapping table.

<table>
<thead>
<tr>
<th>SysML::Ports&amp;Flows::FeatureDirectionKind</th>
<th>SysML v2 FeatureDirectionKind</th>
</tr>
</thead>
<tbody>
<tr>
<td>provided</td>
<td>out</td>
</tr>
<tr>
<td>required</td>
<td>in</td>
</tr>
<tr>
<td>provreqd</td>
<td>inout</td>
</tr>
</tbody>
</table>
7.8.7.3.4 FlowDirectionKind

The SysML::Ports&Flows::FlowDirectionKind enumeration is mapped to the SysML v2 FeatureDirectionKind enumeration according to the following mapping table.

<table>
<thead>
<tr>
<th>SysML::Ports&amp;Flows::FlowDirectionKind</th>
<th>SysML v2 FeatureDirectionKind</th>
</tr>
</thead>
<tbody>
<tr>
<td>out</td>
<td>out</td>
</tr>
<tr>
<td>in</td>
<td>in</td>
</tr>
<tr>
<td>inout</td>
<td>inout</td>
</tr>
</tbody>
</table>

7.8.7.3.5 FullPort_Mapping

Description

A SysML::Ports&Flows::FullPort element is mapped to a part usage in SysML v2 with metadata that marks the part usage as a full port. The metadata is defined in the SysML v1 library for SysML v2.

The mapping class FullPortUntyped_Mapping does the same for full ports that have no type.

The following shows an example of what the textual SysML v2 syntax of the result of the transformation may look like.

```plaintext
part sysMLv1FullPort : SysMLv1Block {SysMLv1Library::PortData {isFullPort = true;}}
```
